Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Current Land Use [Areas a, b, c, and d (Summary Area I)]		
<u>Industrial</u>		
Ingestion of groundwater	No	Groundwater not in use.
Dermal contact with groundwater while showering	No	Groundwater not in use.
Inhalation of vapors while showering in groundwater	No	Groundwater not in use.
External exposure to ionizing radiation from groundwater while showering	No	Groundwater not in use.
Ingestion of soil	No	Included in source unit risk assessments or will be included in SOU or BGOU assessment.
Dermal contact with soil	No	Included in source unit risk assessments or will be included in SOU or BGOU assessment.
Inhalation of vapors and particulates emitted from soil	No	Included in source unit risk assessments or will be included in SOU or BGOU assessment.
External exposure to ionizing radiation from soil	No	Included in source unit risk assessments or will be included in SOU or BGOU assessment.
Ingestion of waste	No	Included in source unit risk assessments or will be included in SOU or BGOU assessment.
Dermal contact with waste	No	Included in source unit risk assessments or will be included in SOU or BGOU assessment.
Inhalation of vapors and particulates emitted from waste	No	Included in source unit risk assessments or will be included in SOU or BGOU assessment.
External exposure to ionizing radiation from waste	No	Included in source unit risk assessments or will be included in SOU or BGOU assessment.
Ingestion of sediment	No	Included in source unit risk assessments or will be included in SWOU, SOU, or BGOU assessment.
Dermal contact with sediment	No	Included in source unit risk assessments or will be included in SWOU, SOU, or BGOU assessment.
Inhalation of particulates and vapors in sediment	No	Included in source unit risk assessments or will be included in SWOU, SOU, or BGOU assessment.
External exposure from sediment	No	Included in source unit risk assessments or will be included in SWOU, SOU, or BGOU assessment.
Ingestion of surface water	No	Included in source unit risk assessments or will be included in SWOU, SOU, or BGOU assessment.

Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA (continued)

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Dermal contact with surface water	No	Included in source unit risk assessments or will be included in SWOU, SOU, or BGOU assessment.
Inhalation of vapors emitted by surface water	No	Included in source unit risk assessments or will be included in SWOU, SOU, or BGOU assessment.
External exposure to ionizing radiation emitted from surface water	No	Included in source unit risk assessments or will be included in SWOU, SOU, or BGOU assessment.
Recreational		
Ingestion of soil	No	Area is secure. No recreational use possible.
Dermal contact with soil	No	Area is secure. No recreational use possible.
Inhalation of particles and vapors emitted from soil	No	Area is secure. No recreational use possible.
External exposure to ionizing radiation from soil	No	Area is secure. No recreational use possible.
Ingestion of waste	No	Area is secure. No recreational use possible.
Dermal contact with waste	No	Area is secure. No recreational use possible.
Inhalation of vapors and particulates emitted from waste	No	Area is secure. No recreational use possible.
External exposure to ionizing radiation from waste	No	Area is secure. No recreational use possible.
Ingestion of sediment	No	Area is secure. No recreational use possible.
Dermal contact with sediment	No	Area is secure. No recreational use possible.
Inhalation of particulates and vapors emitted from sediment	No	Area is secure. No recreational use possible.
External exposure to ionizing radiation from sediment	No	Area is secure. No recreational use possible.
Ingestion of surface water	No	Area is secure. No recreational use possible.
Dermal contact with surface water	No	Area is secure. No recreational use possible.
Inhalation of vapors emitted from surface water	No	Area is secure. No recreational use possible.
External exposure to ionizing radiation from surface water	No	Area is secure. No recreational use possible.
Consumption of fish in man-made or natural bodies of water	No	Area is secure. No recreational use possible.

Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA (continued)

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Consumption of game drinking from man-made or natural bodies of water or exposed to contaminants in soil	No	Included in source unit risk assessments completed earlier.
Residential		
Ingestion of groundwater	No	Not a current use of area.
Dermal contact with groundwater while showering	No	Not a current use of area.
Inhalation of vapors emitted from groundwater while showering	No	Not a current use of area.
Inhalation of vapors emitted from groundwater during household use	No	Not a current use of area.
External exposure to ionizing radiation from groundwater while showering	No	Not a current use of area.
Ingestion of soil	No	Not a current use of area.
Dermal contact with soil	No	Not a current use of area.
Inhalation of vapors and particulates emitted from soil	No	Not a current use of area.
External exposure to ionizing radiation from soil	No	Not a current use of area.
Ingestion of waste	No	Not a current use of area.
Dermal contact with waste	No	Not a current use of area.
Inhalation of vapors and particulates emitted from waste	No	Not a current use of area.
External exposure to ionizing radiation from waste	No	Not a current use of area.
Ingestion of sediment	No	Not a current use of area.
Dermal contact with sediment	No	Not a current use of area.
Inhalation of particulates and vapors in sediment	No	Not a current use of area.
External exposure from creek sediment	No	Not a current use of area.
Ingestion of surface water	No	Not a current use of area.
Dermal contact with surface water	No	Not a current use of area.
Inhalation of vapors in surface water	No	Not a current use of area.
External exposure to ionizing radiation emitted from surface water	No	Not a current use of area.
Consumption of vegetables	No	Not a current use of area.
Consumption of beef and dairy products	No	Not a current use of area.
Consumption of pork	No	Not a current use of area.
Consumption of poultry and eggs	No	Not a current use of area.
Current Land Use [Areas e, f, g, h, i, j, k (Summary Area m)]		
Industrial		
Ingestion of groundwater	No	Groundwater not in use (DOE 1994d)
Dermal contact with groundwater while showering	No	Groundwater not in use (DOE 1994d)
Inhalation of vapors while showering in groundwater	No	Groundwater not in use (DOE 1994d)
External exposure to ionizing radiation from groundwater while showering	No	Groundwater not in use (DOE 1994d)

Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA (continued)

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Ingestion of soil	No	Not a media of concern in these areas or route included in source unit assessment.
Dermal contact with soil	No	Not a media of concern in these areas or route included in source unit assessment.
Inhalation of vapors and particulates emitted from soil	No	Not a media of concern in these areas or route included in source unit assessment.
External exposure to ionizing radiation from soil	No	Not a media of concern in these areas or route included in source unit assessment.
Ingestion of waste	No	Not a media of concern in these areas or route included in source unit assessment.
Dermal contact with waste	No	Not a media of concern in these areas or route included in source unit assessment.
Inhalation of vapors and particulates emitted from waste	No	Not a media of concern in these areas or route included in source unit assessment.
External exposure to ionizing radiation from waste	No	Not a media of concern in these areas or route included in source unit assessment.
Ingestion of sediment	No	Data not available. To be included in SWOU assessment.
Dermal contact with sediment	No	Data not available. To be included in SWOU assessment.
Inhalation of particulates and vapors in sediment	No	Data not available. To be included in SWOU assessment.
External exposure from creek sediment	No	Data not available. To be included in SWOU assessment.
Ingestion of surface water in natural bodies of water	No	Data not available. To be included in SWOU assessment.
Dermal contact with surface water in natural bodies of water	No	Data not available. To be included in SWOU assessment.
Inhalation of vapors in surface water in natural bodies of water	No	Data not available. To be included in SWOU assessment.
External exposure to ionizing radiation emitted from surface water in natural bodies of water	No	Data not available. To be included in SWOU assessment.
Recreational		
Ingestion of soil	No	Not a media of concern in these areas or route included in source unit assessment.
Dermal contact with soil	No	Not a media of concern in these areas or route included in source unit assessment.
Inhalation of particles and vapors emitted from soil	No	Not a media of concern in these areas or route included in source unit assessment.
External exposure to ionizing radiation from soil	No	Not a media of concern in these areas or route included in source unit assessment.
Ingestion of waste	No	Not a media of concern in these areas or route included in source unit assessment.

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Dermal contact with waste	No	Not a media of concern in these areas or route included in source unit assessment.
Inhalation of vapors and particulates emitted from waste	No	Not a media of concern in these areas or route included in source unit assessment.
External exposure to ionizing radiation from waste	No	Not a media of concern in these areas or route included in source unit assessment.
Ingestion of sediment	No	Data not available. To be included in SWOU assessment.
Dermal contact with sediment	No	Data not available. To be included in SWOU assessment.
Inhalation of particulates and vapors emitted from sediment	No	Data not available. To be included in SWOU assessment.
External exposure to ionizing radiation from sediment	No	Data not available. To be included in SWOU assessment.
Ingestion of surface water	No	Data are not available for natural bodies of water. Assessment for natural bodies of water will be included in the SWOU assessment. Currently, man-made bodies filled with groundwater do not exist.
Dermal contact with surface water	No	Data are not available for natural bodies of water. Assessment for natural bodies of water will be included in the SWOU assessment. Currently, man-made bodies filled with groundwater do not exist.
Inhalation of vapors emitted from surface water	No	Data are not available for natural bodies of water. Assessment for natural bodies of water will be included in the SWOU assessment. Currently, man-made bodies filled with groundwater do not exist.
External exposure to ionizing radiation from surface water	No	Data are not available for natural bodies of water. Assessment for natural bodies of water will be included in the SWOU assessment. Currently, man-made bodies filled with groundwater do not exist.
Consumption of fish in man-made or natural bodies of water	No	Assessment for natural bodies of water will be included in the SWOU assessment. Currently, man-made bodies filled with groundwater do not exist.
Consumption of game drinking from man-made or natural bodies of water or exposed to contaminants in soil	No	Assessment for natural bodies of water will be included in the SWOU assessment. Currently, man-made bodies filled with groundwater do not exist.
Residential		
Ingestion of groundwater	No	Not current use in area due to water policy (DOE 1994d).

Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA (continued)

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Dermal contact with groundwater while showering	No	Not current use in area due to water policy (DOE 1994d).
Inhalation of vapors emitted from groundwater while showering	No	Not current use in area due to water policy (DOE 1994d).
Inhalation of vapors emitted from groundwater during household use	No	Not current use in area due to water policy (DOE 1994d).
External exposure to ionizing radiation from groundwater while showering	No	Not current use in area due to water policy (DOE 1994d).
Ingestion of soil	No	Not a media of concern in these areas or route included in source unit assessment.
Dermal contact with soil	No	Not a media of concern in these areas or route included in source unit assessment.
Inhalation of vapors and particulates emitted from soil	No	Not a media of concern in these areas or route included in source unit assessment.
External exposure to ionizing radiation from soil	No	Not a media of concern in these areas or route included in source unit assessment.
Ingestion of waste	No	Not a media of concern in these areas or route included in source unit assessment.
Dermal contact with waste	No	Not a media of concern in these areas or route included in source unit assessment.
Inhalation of vapors and particulates emitted from waste	No	Not a media of concern in these areas or route included in source unit assessment.
External exposure to ionizing radiation from waste	No	Not a media of concern in these areas or route included in source unit assessment.
Ingestion of sediment	No	See recreational use scenario.
Dermal contact with sediment	No	See recreational use scenario.
Inhalation of particulates and vapors in sediment	No	See recreational use scenario.
External exposure from creek sediment	No	See recreational use scenario.
Ingestion of surface water	No	See recreational use scenario.
Dermal contact with surface water	No	See recreational use scenario.
Inhalation of vapors in surface water	No	See recreational use scenario.
External exposure to ionizing radiation emitted from surface water	No	See recreational use scenario.
Consumption of vegetables	No	Route included in source unit assessment or groundwater not currently used for irrigation in area (DOE 1994d).
Consumption of beef and dairy products	No	Groundwater not currently used for irrigation in area (DOE 1994d).
Consumption of pork	No	Groundwater not currently used for irrigation in area (DOE 1994d).

Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA (continued)

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Consumption of poultry and eggs	No	Groundwater not currently used for irrigation in area (DOE 1994d).
Future Land Use [All Areas]		
<u>Industrial</u>		
Ingestion of groundwater	Yes	Future use of groundwater is possible.
Dermal contact with groundwater while showering	Yes	Future use of groundwater is possible.
Inhalation of vapors while showering in groundwater	Yes	Future use of groundwater is possible.
External exposure to ionizing radiation from groundwater while showering	No	Although groundwater may be used in future, shielding from water prevents significant external dose via this route.
Ingestion of soil	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, SWOU, or BGOU assessment.
Dermal contact with soil	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, SWOU, or BGOU assessment.
Inhalation of vapors and particulates emitted from soil	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, SWOU, or BGOU assessment.
External exposure to ionizing radiation from soil	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, SWOU, or BGOU assessment.
Ingestion of waste	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU or BGOU assessment.
Dermal contact with waste	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU or BGOU assessment.
Inhalation of vapors and particulates emitted from waste	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU or BGOU assessment.
External exposure to ionizing radiation from waste	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU or BGOU assessment.

Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA (continued)

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Ingestion of sediment	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
Dermal contact with sediment	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
Inhalation of particulates and vapors in sediment	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
External exposure from sediment	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
Ingestion of surface water	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
Dermal contact with surface water	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
Inhalation of vapors in surface water	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
External exposure to ionizing radiation emitted from surface water	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
Recreational		
Ingestion of soil	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in SWOU, BGOU, or SOU assessment.
Dermal contact with soil	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in SWOU, BGOU, or SOU assessment.
Inhalation of particles and vapors emitted from soil	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in SWOU, BGOU, or SOU assessment.

Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA (continued)

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
External exposure to ionizing radiation from soil	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in SWOU, BGOU, or SOU assessment.
Ingestion of waste	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in BGOU or SOU assessment.
Dermal contact with waste	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in BGOU or SOU assessment.
Inhalation of vapors and particulates emitted from waste	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in BGOU or SOU assessment.
External exposure to ionizing radiation from waste	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in BGOU or SOU assessment.
Ingestion of sediment	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
Dermal contact with sediment	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
Inhalation of particulates and vapors emitted from sediment	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
External exposure to ionizing radiation from sediment	No	Either included in source unit risk assessment completed earlier, or data is unavailable and will be included in SOU, BGOU, or SWOU assessment.
Ingestion of surface water	Yes	Man-made bodies filled with groundwater are a potential future use and are assessed. Natural bodies of water were either assessed as part of a source unit evaluation or will be assessed as part of the SWOU evaluation.

Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA (continued)

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Dermal contact with surface water	Yes	Man-made bodies filled with groundwater are a potential future use and are assessed. Natural bodies of water either were assessed as part of a source unit evaluation or will be assessed as part of the SWOU evaluation.
Inhalation of vapors emitted from surface water	No	Although man-made bodies filled with groundwater are a potential future use and are assessed, the mixing volume for vapors is too large to elicit a significant dose. Therefore, this route is not quantified. Natural bodies of water either were assessed as part of a source unit evaluation or will be assessed as part of the SWOU evaluation.
External exposure to ionizing radiation from surface water	Yes	Although man-made bodies filled with groundwater are a potential future use and are assessed, the shielding from water prevents a significant dose. Therefore, this route is not quantified. Natural bodies of water either were assessed as part of a source unit evaluation or will be assessed as part of the SWOU evaluation.
Consumption of fish in man-made or natural bodies of water	Yes	Man-made bodies filled with groundwater are a potential future use and are assessed. Natural bodies of water either were assessed as part of a source unit evaluation or will be assessed as part of the SWOU evaluation.
Consumption of game drinking from man-made or natural bodies of water or exposed to contaminants in soil	Yes	Man-made bodies filled with groundwater are a potential future use and are assessed. Natural bodies of water either were assessed as part of a source unit evaluation or will be assessed as part of the SWOU evaluation.
Residential		
Ingestion of groundwater	Yes	Future use of groundwater is possible.
Dermal contact with groundwater while showering	Yes	Future use of groundwater is possible.
Inhalation of vapors emitted from groundwater while showering	Yes	Future use of groundwater is possible.
Inhalation of vapors emitted from groundwater during household use	Yes	Future use of groundwater is possible.
External exposure to ionizing radiation from groundwater while showering	No	Although groundwater may be used in future, shielding from water prevents significant external dose via this route.

Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA (continued)

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Ingestion of soil	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, SWOU, or BGOU assessment.
Dermal contact with soil	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, SWOU, or BGOU assessment.
Inhalation of vapors and particulates emitted from soil	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, SWOU, or BGOU assessment.
External exposure to ionizing radiation from soil	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU, SWOU, or BGOU assessment.
Ingestion of waste	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU or BGOU assessment.
Dermal contact with waste	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU or BGOU assessment.
Inhalation of vapors and particulates emitted from waste	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU or BGOU assessment.
External exposure to ionizing radiation from waste	No	Either included in source unit risk assessment completed earlier or data is unavailable and will be included in SOU or BGOU assessment.
Ingestion of sediment	No	See recreational use.
Dermal contact with sediment	No	See recreational use.
Inhalation of particulates and vapors in sediment	No	See recreational use.
External exposure from creek sediment	No	See recreational use.
Ingestion of surface water	No	See recreational use.
Dermal contact with surface water	No	See recreational use.
Inhalation of vapors in surface water	No	See recreational use.
External exposure to ionizing radiation emitted from surface water	No	See recreational use.
Consumption of vegetables	Yes	Gardening is a common activity in area. Without the current restriction on groundwater use, irrigation with groundwater is probable.

Table 3.1 Summary of reasons for selection or dismissal of exposure routes for quantitative evaluation in the GWOU BHHRA (continued)

Exposure route, medium, and exposure point	Route quantified?	Note/Reasoning
Consumption of beef and dairy products	Yes	Livestock production and dairy farming is a common activity in area. Without the current restriction on groundwater use, watering of livestock with groundwater is probable.
Consumption of pork	Yes	Livestock production is a common activity in area. Without the current restriction on groundwater use, watering of livestock with groundwater is probable.
Consumption of poultry and eggs	Yes	Poultry (chicken and turkey) raising is a likely activity. Without the current restriction on groundwater use, watering of birds with groundwater in probable.

Notes:

- SWOU = Surface water operable unit.
- SOU = Soils operable unit.
- BGOU = Burial grounds operable unit.

Table 3.2 Reasonable maximum exposure assumptions and human intake factors for ingestion by a future worker of groundwater¹

Equations:

$$\text{Chemical Intake (mg/kg-day)} = \frac{C_w \times IR_w \times EF \times ED}{BW \times AT}$$

$$\text{Radionuclide Intake (pCi)} = A_w \times IR_w \times EF \times ED$$

Parameter	Units	Value used	References ²
Concentration in groundwater = C_w	mg/L	Chemical-specific	-----
Activity in groundwater = A_w	pCi/L	Chemical-specific	-----
Ingestion rate = IR_w	L/day	1	[14]
Exposure frequency = EF	day/yr	250	[14]
Exposure duration = ED	year	25	[14]
Body weight = BW	kg	70	[14]
Averaging time = AT	yr × day/yr	70 × 365 (carcinogen) ED × 365 (noncarcinogen)	[14]

¹ Equation from [1].

³ Professional judgment was used to adjust child intake rate to 20% of adult intake rate.

Notes:

Human intake factors for consumption by a recreator of fish			
Cohort	Endpoint		
	Chemical Carcinogen ¹	Chemical Noncarcinogen ¹	Radionuclide Carcinogen ²
Adult	2.24×10^{-4}	7.11×10^{-4}	4.00×10^{-2}
Teen	1.99×10^{-4}	1.16×10^{-3}	2.18×10^{-2}
Child	6.12×10^{-5}	7.13×10^{-4}	2.27×10^{-1}

¹ Chemical concentration in fish (mg/kg) (see Table 3.24) times intake factor [kg/(kg • day)] yields default RME dose for the associated endpoint.

² Radionuclide activity in fish (see Table 3.24) times intake factor yields default RME dose.

Table 3.9 Reasonable maximum exposure assumptions and human intake factors for consumption by a recreator of venison using ponds filled with groundwater as a drinking water source¹

Equations:

$$\text{Chemical Intake (mg/kg-day)} = \frac{C_d \times IR \times FI \times EF \times ED}{BW \times AT}$$

$$\text{Radionuclide Intake (pCi)} = A_d \times CF \times IR \times FI \times EF \times ED$$

Parameter	Units	Value used	References ²
Chemical concentration in venison = C_d	mg/kg	Chemical-specific	See Table 3.25
Radiological activity in venison = A_d	pCi/g	Chemical-specific	See Table 3.25
Ingestion rate ^c = IR	kg/day	0.032 (adult) 0.032 (teen) 0.007 (child)	See footnote 3
Conversion factor = CF	g/kg	1000	-----
Diet fraction = FI	unitless	1	[5]
Exposure frequency = EF	day/yr	350	See footnote 3
Exposure duration = ED	years	22 (adult) 12 (teen) 6 (child)	[14]
Body weight = BW	kg	70 (adult) 43 (teen) 14.5 (child)	[14]
Averaging time = AT	yr × day/yr	70 × 365 (carcinogen) ED × 365 (noncarcinogen)	[14]

¹ Equation from [1].

² References follow Table 3.34.

³ Based on 2 deer maximum per year in the state of Kentucky, 50% success rate (Kentucky Department of Fish and Wildlife, 1992, Deer Surveys, Project No: W-45-24.), dressed weight averaging 108.5 pounds per deer for Ballard and McCracken counties, 60% of venison recovered per deer, 2.5 persons per household in Ballard and McCracken counties, and a child consumption rate 20% of that for adults.

Notes:

Human intake factors for consumption by a recreator of venison

Cohort	Endpoint		
	Chemical Carcinogen ¹	Chemical Noncarcinogen ¹	Radionuclide Carcinogen ²
Adult	1.38×10^{-4}	4.38×10^{-4}	2.46×10^5
Teen	1.22×10^{-4}	7.14×10^{-4}	1.34×10^5
Child	3.97×10^{-5}	4.63×10^{-4}	1.47×10^4

¹ Chemical concentration in venison (mg/kg) (see Table 3.25) times human intake factor [kg/(kg • day)] yields default RME dose for associated endpoint.

² Radionuclide concentration in venison (pCi/g) (see Table 3.25) times human intake factor (g) yields RMS dose.

Table 3.10 Reasonable maximum exposure assumptions and human intake factors for consumption by a recreator of rabbit using ponds filled with groundwater as a drinking water source¹

Equations:

$$\text{Chemical Intake (mg/kg-day)} = \frac{C_r \times IR \times FI \times EF \times ED}{BW \times AT}$$

$$\text{Radionuclide Intake (pCi)} = A_r \times CF \times IR \times FI \times EF \times ED$$

Parameter	Units	Value used	References ²
Chemical concentration in rabbit = C_r	mg/kg	Chemical-specific	See Table 3.26
Radiological activity in rabbit = A_r	pCi/g	Chemical-specific	See Table 3.26
Ingestion rate ³ = IR	kg/meal	0.0165 (adult) 0.0082 (teen) 0.0033 (child)	See footnote 3

	Chemical Carcinogen ¹	Chemical Noncarcinogen ¹	Radionuclide Carcinogen ²
Adult	1.88×10^{-4}	5.99×10^{-4}	3.36×10^2
Teen	1.32×10^{-4}	7.67×10^{-4}	1.44×10^2
Child	1.41×10^{-4}	1.64×10^{-3}	5.21×10^1

¹ Chemical concentration in pork (mg/kg) (see Table 3.33) times intake factor [kg/(kg • day)] yields default RME dose for associated endpoint.

² Radionuclide concentration in pork (pCi/kg) (see Table 3.33) times intake factor (kg) yields default RME dose.

Table 3.22 Reasonable maximum exposure assumptions and human intake factors for consumption by a resident of turkey watered with groundwater¹

Equations:

$$\text{Chemical Intake (mg/kg-day)} = \frac{C_p \times IR \times FI \times EF \times ED}{BW \times AT}$$

$$\text{Radionuclide Intake (pCi)} = A_p \times IR \times FI \times EF \times ED$$

Parameter	Units	Value used	References ²
Chemical concentration in turkey = C_p	mg/kg	Chemical-specific	See Table 3.34
Radiological activity in turkey = A_p	pCi/kg	Chemical-specific	See Table 3.34
Ingestion rate = IR	kg/day	0.0377 (child 3 - 5) 0.0413 (teen 12 - 19) 0.0615 (adult 20 -39)	[23]
Diet fraction = FI	unitless	1	[5]
Exposure frequency = EF	day/year	350	
Exposure duration = ED	years	6 (child) 12 (teen) 22 (adult)	[14]
Body weight = BW	kg	14.5 (child) 43 (teen) 70 (adult)	[14]
Averaging time = AT	yr × day/yr	70 × 365 (carcinogen) ED × 365 (noncarcinogen)	[14]

¹ Equation from [1]. These intake rates are for those people that eat turkey and should not be combined with the intake rates for other media.
² References follow Table 3.34.

Notes:

Human intake factors for consumption by a resident of turkey

Cohort	Endpoint		
	Chemical Carcinogen ¹	Chemical Noncarcinogen ¹	Radionuclide Carcinogen ²
Adult	2.65×10^{-4}	8.42×10^{-4}	4.74×10^{-2}
Teen	1.58×10^{-4}	9.21×10^{-4}	1.73×10^{-2}
Child	2.14×10^{-4}	2.49×10^{-3}	7.92×10^{-1}

¹ Chemical concentration in turkey (mg/kg) (see Table 3.34) times intake factor [kg/(kg • day)] yields default RME dose for associated endpoint.

² Radionuclide concentration in turkey (pCi/kg) (see Table 3.34) times intake factor (kg) yields default RME dose.

Table 3.30 Reasonable maximum exposure assumptions for concentration or activity of COPCs in milk¹

Equations:

$$C_m = F_m \times [(C_{\text{pasture}} \times AC \times f_s \times Q_f) + (C_s \times AC \times Q_s) + (C_w \times CF_{\text{rad}} \times Q_w)]$$

$$C_{\text{pasture}} = (C_s \times R_{\text{upp}}) + (C_s \times R_{\text{es}})$$

Parameter	Units	Value used	References ²
Chemical concentration in milk = C_b	mg/kg or pCi/g	Chemical-specific	Calculated
Forage-milk transfer factor = F_b	day/kg	Chemical-specific	-----
Chemical concentration in pasture = C_{pasture}	mg/kg or pCi/g	Chemical-specific	Calculated
Area of contact ³ = AC	unitless	AS/AD	-----
Area of SWMU = AS	acres	SWMU-specific	-----
Area of dairy range = AD	acres	2	[29]
Fraction of dairy's food from site when on site = f_s	unitless	1.0	[5]
Quantity of pasture ingested daily by dairy = Q_f	kg/day	25	[25]
Chemical concentration in soil or sediment = C_s	mg/kg or pCi/g	Chemical-specific	-----
Quantity of soil ingested daily by dairy = Q_s	kg/day	1	[26]
Contaminant concentration in water ⁴ = C_w	mg/L or pCi/L	Chemical-specific	-----
Conversion factor for radionuclides = CF_{rad}	kg/g	10^{-3}	-----
Quantity of water ingested daily by dairy = Q_w	L/day	60	[25]
Soil to plant uptake (dry) = R_{upp}	unitless	Chemical-specific or $38 \times K_{\text{ow}}^{0.58}$	[8]
Soil resuspension multiplier = R_{es}	unitless	0.25	[3]

¹ Equations after [1], [2], [3], [4].

² All references follow Table 3.34.

³ AC cannot be greater than 1.

⁴ All ingested water is considered to be from SWMU or SWMU area.

Table 3.31 Reasonable maximum exposure assumptions for concentration or activity of COPCs in chicken¹

Equations:

$$C_p = F_p \times [(C_{\text{pasture}} \times AC \times f_s \times Q_f) + (C_s \times AC \times Q_s) + (C_w \times CF_{\text{rad}} \times Q_w)]$$

$$C_{\text{pasture}} = (C_s \times R_{\text{upp}}) + (C_s \times R_{\text{es}})$$

Parameter	Units	Value used	References ²
Chemical concentration in chicken = C_p	mg/kg or pCi/g	Chemical-specific	Calculated
Forage-chicken transfer factor = F_p	day/kg	Chemical-specific	-----
Chemical concentration in pasture = C_{pasture}	mg/kg or pCi/g	Chemical-specific	Calculated
Area of contact ³ = AC	unitless	AS/AD	-----
Area of SWMU = AS	acres	SWMU-specific	-----
Area of chicken range = AD	acres	To be determined	-----
Fraction of chicken's food from site = f_s	unitless	.5	[29]assumes broilers get 50% bought grain
Quantity of pasture ingested daily by chicken = Q_f	kg/day	0.12	[24]
Chemical concentration in soil or sediment = C_s	mg/kg or pCi/g	Chemical-specific	-----
Quantity of soil ingested daily by chicken = Q_s	kg/day	0.0024	[8]
Contaminant concentration in water ⁴ = C_w	mg/L or pCi/L	Chemical-specific	-----
Conversion factor for radionuclides = CF_{rad}	kg/g	10^{-3}	-----
Quantity of water ingested daily by chicken = Q_w	L/day	0.24	[24]
Soil to plant uptake (dry) = R_{upp}	unitless	Chemical-specific or $38 \times K_{\text{ow}}^{-0.58}$	[8]
Soil resuspension multiplier = R_{es}	unitless	0.25	[3]

¹ Equations after [1], [2], [3], [4].

² All references follow Table 3.34.

³ AC cannot be greater than 1.

⁴ All ingested water is considered to be from SWMU or SWMU area.

Table 3.32 Reasonable maximum exposure assumptions for concentration or activity of COPCs in egg¹

Equations:

$$C_e = F_e \times (C_w \times CF_{rad} \times Q_w)$$

Parameter	Units	Value used	References ²
Chemical concentration in egg = C_e	mg/kg or pCi/g	Chemical-specific	Calculated
Forage-egg transfer factor = F_e	day/kg	Chemical-specific	-----
Contaminant concentration in water = C_w	mg/L or pCi/L	Chemical-specific	-----
Conversion factor for radionuclides = CF_{rad}	kg/g	10^{-3}	-----
Quantity of water ingested daily by chicken ³ = Q_w	L/day	0.24	[24]

¹ Equations after [1], [2], [3], [4].

² All references follow Table 3.34.

³ All ingested water is considered to be from SWMU or SWMU area.

Note: Hens laying eggs generally are in a hutch and don't forage on pasture, even for subsistence farmer. Therefore, they eat only store bought grain and no pasture or soil. Contaminants in drinking water could accumulate in the eggs

Table 3.33 Reasonable maximum exposure assumptions for concentration or activity of COPCs in pork¹

Equations:

$$C_{\text{pork}} = F_{\text{pork}} \times [(C_{\text{pasture}} \times AC \times f_s \times Q_f) + (C_s \times AC \times Q_s) + (C_w \times CF_{\text{rad}} \times Q_w)]$$

$$C_{\text{pasture}} = (C_s \times R_{\text{upp}}) + (C_s \times R_{\text{es}})$$

Parameter	Units	Value used	References ²
Chemical concentration in pork = C_{pork}	mg/kg or pCi/g	Chemical-specific	Calculated
Forage-pork transfer factor = F_{pork}	day/kg	Chemical-specific	-----
Chemical concentration in pasture = C_{pasture}	mg/kg or pCi/g	Chemical-specific	Calculated
Area of contact ³ = AC	unitless	AS/AD	-----
Area of SWMU = AS	acres	SWMU-specific	-----
Area of swine range = AD	acres	To be determined	-----
Fraction of swine's food from site = f_s	unitless	0.4	[29]
Quantity of pasture ingested daily by swine = Q_f	kg/day	2.4	[36]
Chemical concentration in soil or sediment = C_s	mg/kg or pCi/g	Chemical-specific	-----
Quantity of soil ingested daily by swine = Q_s	kg/day	0.034	[28]
Contaminant concentration in water ⁴ = C_w	mg/L or pCi/L	Chemical-specific	-----
Conversion factor for radionuclides = CF_{rad}	kg/g	10^{-3}	-----
Quantity of water ingested daily by swine = Q_w	L/day	6.14	[27] 2.56 to 1, water to feed ratio
Soil to plant uptake (dry) = R_{upp}	unitless	Chemical-specific or $38 \times K_{\text{ow}}^{-0.58}$	[8]
Soil resuspension multiplier = R_{es}	unitless	0.25	[3]

¹ Equations after [1], [2], [3], [4].

² All references follow Table 3.34.

³ AC cannot be greater than 1.

⁴ All ingested water is considered to be from SWMU or SWMU area.

Table 3.34 Reasonable maximum exposure assumptions for concentration or activity of COPCs in turkey¹

Equations:

$$C_p = F_p \times [(C_{pasture} \times AC \times f_s \times Q_f) + (C_s \times AC \times Q_s) + (C_w \times CF_{rad} \times Q_w)]$$

$$C_{pasture} = (C_s \times R_{upp}) + (C_s \times R_{es})$$

Parameter	Units	Value used	References ²
Chemical concentration in turkey = C_p	mg/kg or pCi/g	Chemical-specific	Calculated
Forage-turkey transfer factor = F_b	day/kg	Chemical-specific	-----
Chemical concentration in pasture = $C_{pasture}$	mg/kg or pCi/g	Chemical-specific	Calculated
Area of contact ³ = AC	unitless	AS/AD	-----
Area of SWMU = AS	acres	SWMU-specific	-----
Area of turkey range = AD	acres	To be determined	-----
Fraction of turkey's food from site = f_s	unitless	.5	[29]assume get 50% bought grain
Quantity of pasture ingested daily by turkey = Q_f	kg/day	0.35	[24] 20 wk old male turkey
Chemical concentration in soil or sediment = C_s	mg/kg or pCi/g	Chemical-specific	-----
Quantity of soil ingested daily by turkey = Q_s	kg/day	0.007	[8] same as ratio for chicken
Contaminant concentration in water = C_w	mg/L or pCi/L	Chemical-specific	-----
Conversion factor for radionuclides = CF_{rad}	kg/g	10^{-3}	-----
Quantity of water ingested daily by turkey ⁴ = Q_w	L/day	1.0	[24]1:2 ratio of 20 wk old male turkey
Soil to plant uptake (dry) = R_{upp}	unitless	Chemical-specific or $38 \times K_{ow}^{-0.58}$	[8]
Soil resuspension multiplier = R_{es}	unitless	0.25	[3]

¹ Equations after [1], [2], [3], [4].

² All references follow Table 3.34.

³ AC cannot be greater than 1.

⁴ All ingested water is considered to be from SWMU or SWMU area.
