EXECUTIVE SUMMARY

This report, *C-404 Hazardous Waste Landfill November 2014 Semiannual Groundwater Report (April 2014–September 2014)*, Paducah Gaseous Diffusion Plant, Paducah, Kentucky, PAD-ENM-0091/V2, is being submitted by the U.S. Department of Energy in accordance with requirements in the Kentucky Division of Waste Management Hazardous Waste Facility Permit, KY8-890-008-982. The reporting period covers April 2014 through September 2014 and includes analytical data from the July 2014 sampling of monitoring wells located in the vicinity of the closed C-404 Hazardous Waste Landfill (C-404 Landfill). In 1986, disposal of waste at C-404 Landfill was halted, and a portion of the disposed waste was found to be Resource Conservation and Recovery Act (RCRA) hazardous. The landfill was covered with a RCRA multilayered cap and certified closed in 1987.

The groundwater monitoring results were subjected to statistical analyses, in accordance with the Hazardous Waste Facility Permit. There is no statistically significant evidence of contamination from the C-404 Landfill because concentrations in the compliance wells are not statistically different from the concentrations in background wells.

The annual leachate sump integrity test was performed from September 2014 to October 2014 and is included in Appendix C of this report. On April 24, 2014, the leachate level was measured at 36.4 inches and 1,200 gal was removed on May 7, 2014. The leachate level was 3 inches after removal on May 7, 2014.

Leachate levels, removal information, and sample data from the previous semiannual report are provided in this report because the laboratory data were not available by the regulatory deadline of the previous report.

Minor maintenance was performed on monitoring wells 90A, 93A, and 333. The well casings were painted and their identifying numbers were stenciled. Protective sleeves also were installed on the bollards.

THIS PAGE INTENTIONALLY LEFT BLANK

1. INTRODUCTION

This report contains the statistical evaluation of data from groundwater sampling and analysis for the C-404 Hazardous Waste Landfill (C-404 Landfill) at the Paducah Gaseous Diffusion Plant (PGDP), Paducah, Kentucky. This semiannual report is required by the Kentucky Division of Waste Management (KDWM) Hazardous Waste Facility Permit, KY8-890-008-982 (the permit), GSTR2 Part II, Condition T-47—Detection Monitoring Program—Recordkeeping, Reporting, and Response. The period covered by this report is April 2014 through September 2014.

Groundwater analytical results are provided in Appendix A. The statistical analyses and qualification statement are provided in Appendix B. Landfill leachate information, analytical data, and annual sump integrity test are provided in Appendix C. The groundwater flow direction determination is provided in Appendix D.

1.1 BACKGROUND

The C-404 Landfill is located in the west-central portion of the PGDP secured area. The 1.2-acre facility operated as a surface impoundment from approximately 1952 until early 1957. During this time, influents to the impoundment originated from the C-400 Cleaning Building. In 1957, the impoundment was converted to a solid waste disposal facility for solid uranium-contaminated wastes. When the impoundment was converted into a disposal facility, a sump was installed at the former weir to collect the leachate from the facility. Leachate is pumped from the sump and treated as needed.

In 1986, the disposal of waste at C-404 Landfill was halted, and a portion of the disposed waste was found to be Resource Conservation and Recovery Act (RCRA)-hazardous. The landfill was covered with a RCRA multilayered cap and certified closed in 1987. It currently is regulated under RCRA as a land disposal unit and compliance is monitored under a RCRA postclosure permit issued in 1992.

Previous groundwater monitoring documented that concentrations in compliance wells were statistically different from background wells for trichloroethene (TCE). The *C-404 Landfill Source Demonstration, Paducah Gaseous Diffusion Plant, Paducah, Kentucky* (PRS 2007), documented that the source of the differences from background concentrations in compliance wells is not from the C-404 Landfill, but rather, the source is located upgradient/cross-gradient of the C-404 Landfill.

1.2 MONITORING PERIOD ACTIVITIES

1.2.1 Groundwater Monitoring

Groundwater sampling was conducted in July 2014 using LATA Environmental Services of Kentucky, LLC, procedure PAD-ENM-2101, *Groundwater Sampling*. Appropriate sample containers and preservatives were used. The laboratories that performed analyses used U.S. Environmental Protection Agency-approved methods, as applicable. There are nine monitoring wells (MWs) sampled under this permit for the C-404 Landfill: four Upper Continental Recharge System (UCRS) wells and five Upper Regional Gravel Aquifer (URGA) wells. Table 1 presents the well numbers for URGA wells located upgradient and downgradient of the C-404 Landfill. Table 1 also presents the well numbers for

Table 1. Monitoring Well Locations

UCRS	
Located south of C-404, adjacent to upgradient Regional Gravel Aquifer (RGA) background well MW93	MW94
Located north of C-404, adjacent to downgradient RGA compliance wells	MW85, MW88, MW91
URGA	
Upgradient background wells	MW93, MW420
Downgradient compliance wells	MW84, MW87, MW90A*

*MW90 was abandoned in 2001 and replaced with MW90A.

the UCRS wells located in proximity to the URGA wells. This table refers to these UCRS wells as being adjacent to an “upgradient” or “downgradient” URGA well location, identified relative to the URGA groundwater flow direction (see Figure 1).

The conceptual model for the site demonstrates that groundwater in the UCRS wells flows vertically until it reaches the URGA; therefore, UCRS wells are not considered “upgradient” or “downgradient” of other wells in the area.

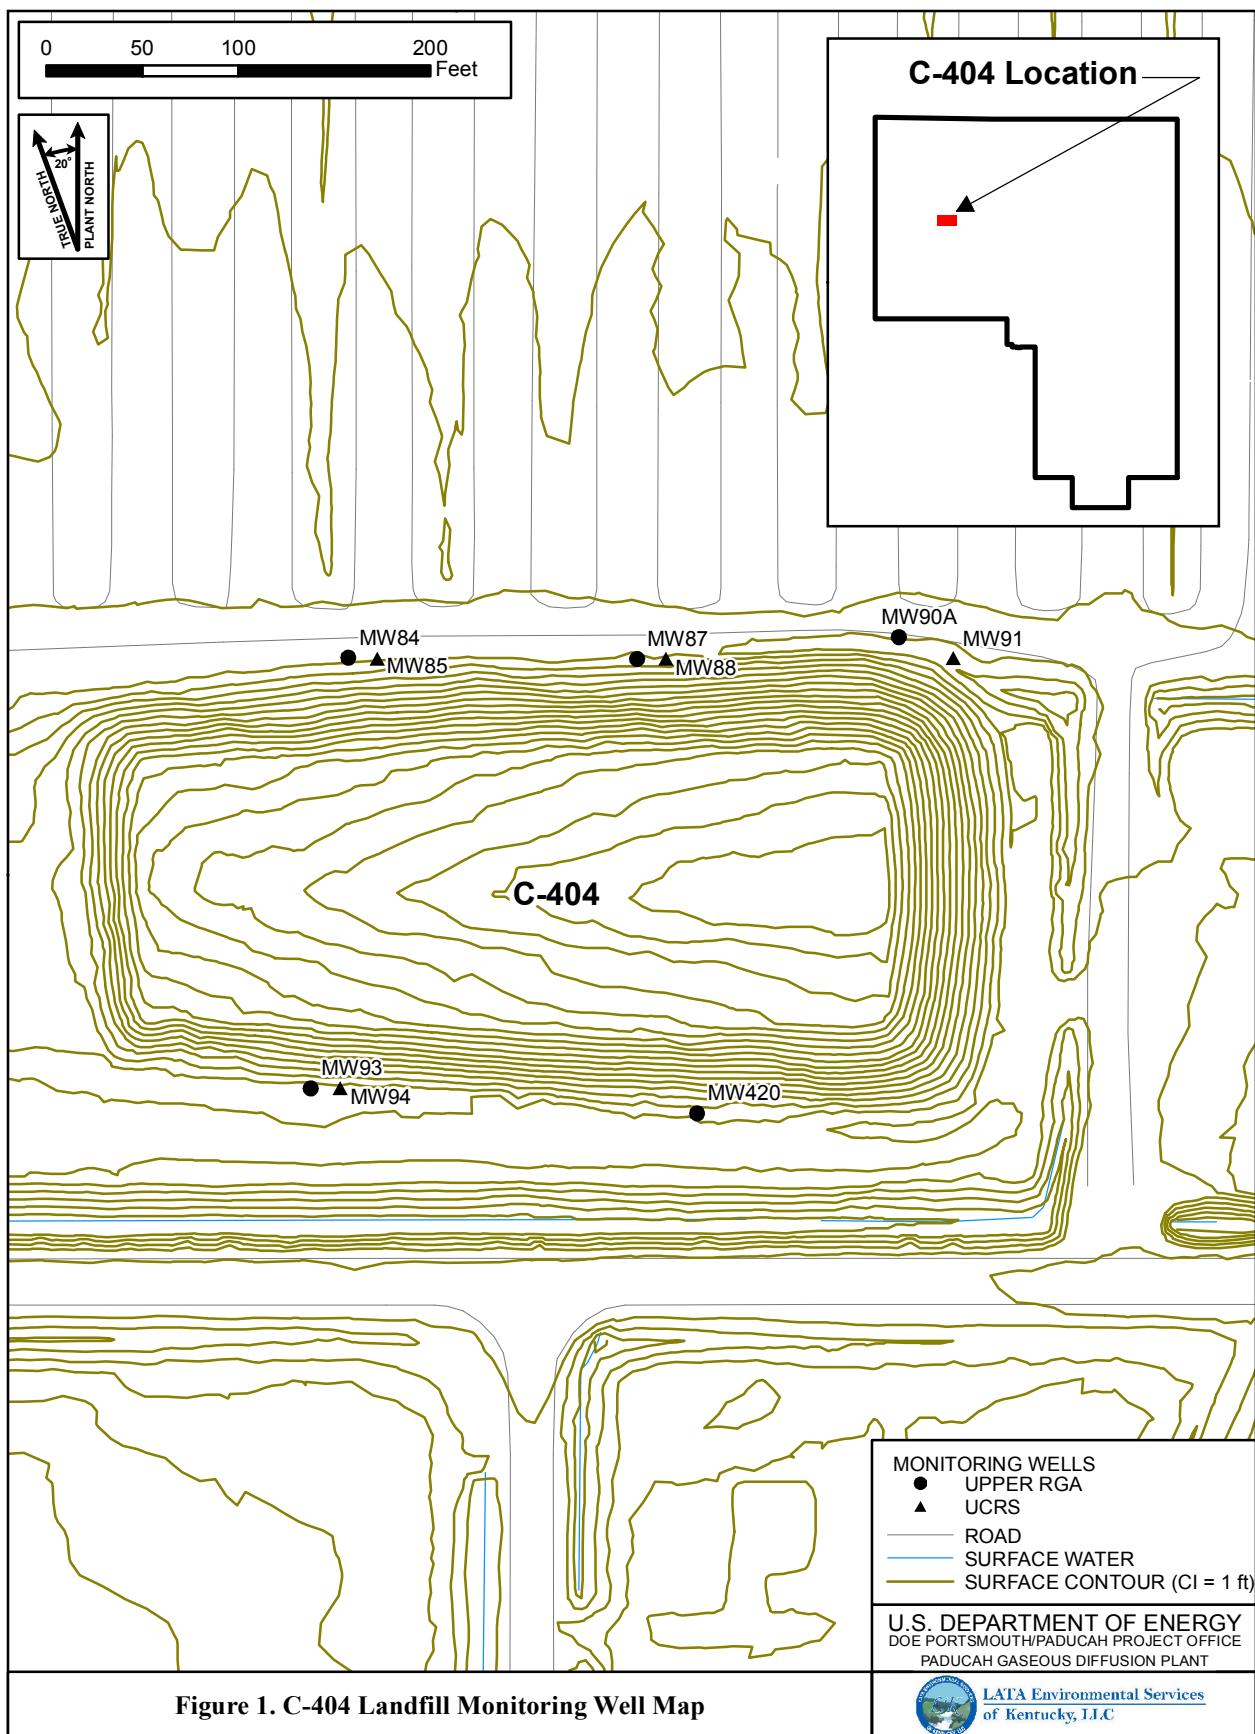

Table 2 presents the Assembled Kentucky Groundwater Database (AKGWA) numbers for each MW. A map of the MW locations is provided in Figure 1. All of the MWs listed in Tables 1 and 2 were sampled during this reporting period, and the samples were analyzed for the required parameters.

Table 2. Assembled Kentucky Groundwater Database Numbers

PGDP Well Number	AKGWA Number
MW84	8000-5233
MW85	8000-5234
MW87	8000-5236
MW88	8000-5237
MW90A	8004-0357
MW91	8000-5240
MW93	8000-5102
MW94	8000-5103
MW420	8005-3263

Appendix A of this report contains the analytical results from the wells that were sampled during the July 2014 semiannual sampling event. The parameters specified in Hazardous Waste Facility Permit, Attachment E, Groundwater Monitoring, were analyzed for all locations sampled. Appendix B of this report contains the statistical analyses. Appendix C of this report contains analytical results from leachate sampling, as well as the C-404 general inspection records, and the monthly leachate depths in the C-404 sump for this reporting period. The annual leachate sump integrity test was performed from September 2014 to October 2014 and is included in Appendix C of this report.

Per Permit Condition GSTR2, T-37, the groundwater flow rate and direction are evaluated annually and reported in the November report. For this November report, a potentiometric map has been included in Appendix D using data from sampling performed in January as supplemental information. Depth-to-water was measured on January 30 and July 30 and 31, 2014, from several wells at the perimeter of the

LATA Environmental Services
of Kentucky, LLC

G:\GIS\ARCVIEW\PROJECTS\C404R3.mxd
11/4/2013

C-404 Landfill (see Table D.3). Water level measurements in 11 vicinity well locations define the potentiometric surface for the URGA (see Table D.3). Groundwater flow direction beneath the C-404 Landfill generally trends northward, but commonly varies from northeast to northwest.

1.2.2 Landfill Leachate

The C-404 General Inspection Records and the Monthly and Quarterly Landfill Inspection Results are included in Appendix C. In accordance with the Hazardous Waste Facility Permit, the quantity of liquid in the leachate collection system is monitored (at least monthly) and, at a minimum, will be “removed when the quantity exceeds three ft in depth.” The monthly leachate depths in the C-404 sump recorded for this reporting period are included in Appendix C.

The volume of leachate removed from the sump during this reporting period, April–September 2014, was 1,200 gal. Once the leachate depth reached 3 ft, the leachate was sampled and pumped into a mobile tank. Then, the leachate was transferred to a permitted hazardous waste storage facility on-site prior to characterization and transfer off-site for treatment.

Leachate levels, removal information, and sample data from the previous semiannual report are provided in this report because the laboratory data were not available by the regulatory deadline of the previous report. Analytical results from leachate sampling conducted for this removal event (June 2014), which was conducted in association with leachate removal during the period, are included in Appendix C.

Per Permit Attachment I, a leachate sump integrity test is conducted annually at C-404. The test is a measure of water elevations monitored over a one-month period during the year, and reported in this semiannual report. The leachate level was monitored using an automated system at hourly intervals from 8:00 a.m. on September 15, 2014, through 8:00 a.m. on October 16, 2014. The printout of the data is provided in Appendix C. The test shows the leachate level was constant (within 0.01 ft) over the monitoring period; the measurement shows no evidence of leaking.

1.2.3 Maintenance

Minor maintenance was performed on monitoring wells 90A, 93A, and 333. The well casings were painted and their identifying numbers were stenciled. Protective sleeves also were installed on the bollards.

2. STATISTICAL SYNOPSIS

The statistical analyses conducted on the data collected from C-404 Landfill were performed in accordance with procedures in the approved Hazardous Waste Facility Permit, Attachment Part E. Appendix B of this report contains the statistical analyses performed for this reporting period. Data utilized for statistical analyses included data from the URGA background wells, MW93 and MW420, and URGA compliance wells, MW84, MW87, and MW90A. For these statistical analyses, the reporting period data set includes data from January 2012, July 2012, January 2013, August 2013, January 2014, and July 2014.

The Statistical Test 1, Level of Detection (LOD), was performed for 7 of the 13 parameters (cadmium, mercury, selenium, uranium, urapagenium-234, uranium-235, and uranium-238) that are infrequently detected [and have more than 90% censored (nondetect) results]. LOD values are presented in Appendix B. The Statistical Test 2, Test of Proportions, was performed for 4 of the 13 parameters [arsenic (dissolved), chromium, lead, and Tc-99] that have between 50% and 90% censored results. The Statistical Test 3, nonparametric Analysis of Variance (ANOVA), was performed for arsenic and TCE. The Statistical Test 4, parametric ANOVA, was found not to be appropriate for the TCE data set because equality of variance could not be established.

The statistical tests on all parameters showed no statistically significant evidence of contamination from the C-404 Landfill.

3. DATA VALIDATION AND QA/QC SUMMARY

The data and the data validation qualifiers for the July 2014 data set are provided in Appendix A. All data for this data set were considered useable as reported.

Data validation was performed on the organic, inorganic, and radiochemical analytical data by an independent, third-party validator.

Field quality control samples are collected semiannually during each sampling event. Equipment rinseate blanks, field blanks, and trip blanks are obtained to ensure quality control and are reported in the Analytical Results in Appendix A. No contamination was detected in these samples. Laboratory quality control samples, such as matrix spikes, matrix spike duplicates, and method blanks, are performed by the laboratory and reported in the laboratory report. Both field and laboratory quality control sample results are reviewed as part of the data validation process.

GROUNDWATER STATISTICAL SUMMARY

Introduction

The statistical analyses conducted on the data collected from C-404 Hazardous Waste Landfill (C-404 Landfill) were performed in accordance with procedures provided in Appendix E of the C-404 Hazardous Waste Management Permit and previously approved by the Kentucky Division of Waste Management (KDWM). The percent of censored (nondetected) data points for individual parameters was calculated for the combined analytical data from the most recent six sampling events. The percent of censored data was used to select the types of statistical analyses to determine whether compliance well concentrations differed from background well concentrations. For this report, the reporting period data set includes data from January 2012, July 2012, January 2013, August 2013, January 2014, and July 2014.

Statistical Analysis Process

The type of statistical test conducted for each chemical data set is a function of the number of samples and proportion of censored data (nondetects) to uncensored data (detects) in each group. The percent of censored (nondetected) data points for individual parameters was calculated for the combined analytical data. The statistical procedures applied to the data are summarized below.

- Determine the percentage of the censored data using the reporting period data set.
- Group by percentage of censored data where the following apply:
 - If censored data are greater than or equal to 90%, determine the limit of detection (LOD) and half of the LOD (1/2 LOD). This is Statistical Test 1.
 - If censored data are between 50% and 90%, perform a Test of Proportions. If the analysis indicates a significant proportional difference in compliance wells, further analyze through nonparametric Analysis of Variance (ANOVA) Test. This is Statistical Test 2.
 - If censored data are between 15% and 50%, perform nonparametric ANOVA Test. If results exceed the critical value, compute the critical difference used to identify individual well concentrations, which are significantly elevated compared with background. This is Statistical Test 3.
 - If censored data are less than 15%, actual data values are analyzed using parametric ANOVA procedures. If the wells exhibit equal variances, then the data are used as presented. If the wells do not exhibit equal variances, then the log of the data is taken and then used in the calculations. Where statistical testing indicates elevated compliance well concentrations, Bonferroni's Test of Contrasts is performed. This is Statistical Test 4. If variances are found to be unequal even for log-transformed concentrations, Statistical Test 4 is abandoned and Statistical Test 3 is used to compare compliance wells with background wells.

Data Analysis

Data from the upgradient background wells in the Upper Regional Gravel Aquifer (URGA) are included for comparison with three downgradient URGA wells. Figure 1 of this C-404 Landfill Groundwater Report provides a map of the well locations associated with the C-404 Landfill. Upper Continental Recharge System (UCRS) wells in Figure 1 are provided for reference only. Data from wells that are in the UCRS are not included in the statistical analyses.

Table B.1 presents the C-404 Landfill upgradient or background wells and downgradient or compliance wells from the URGA. Data from the URGA compliance wells were compared with data from the URGA background wells.

For this report, the reporting period data set from January 2012 through July 2014 consists of six sets of data.

Table B.1. Monitoring Well Locations

UCRS	
Located South of C-404; adjacent to upgradient Regional Gravel Aquifer (RGA) background well MW93	MW94
Located North of C-404, adjacent to downgradient RGA compliance wells	MW85, MW88, MW91
URGA	
Upgradient background wells	MW93, MW420
Downgradient compliance wells	MW84, MW87, MW90A*

*MW90 was abandoned in 2001 and replaced with MW90A.

Table B.2 lists the number of analyses (observations), nondetects (censored observations), detects (uncensored observations), and missing observations by parameter. When field duplicate data are available from a well, the higher of the two readings was retained for further evaluation.

Censoring Percentage and Statistical Analysis

The type of statistical test set applied to the data is a function of the number of nondetects (censored) versus detects (uncensored) in each of the parameter groups and among the wells. Table B.3 presents the percentage of censored and uncensored data and type of statistical test chosen for each of the parameters.

Table B.2. Summary of Missing, Censored, and Uncensored Data Collected

Parameters	Observations	Missing Observations*	Censored Observations	Uncensored Observations
URGA				
Arsenic	30	0	11	19
Arsenic, Dissolved	30	0	15	15
Cadmium	30	0	29	1
Cadmium, Dissolved	30	0	30	0
Chromium	30	0	16	14
Chromium, Dissolved	30	0	27	3
Lead	30	0	24	6
Lead, Dissolved	30	0	30	0
Mercury	30	0	30	0
Mercury, Dissolved	30	0	30	0
Selenium	30	0	27	3
Selenium, Dissolved	30	0	30	0
Technetium-99	30	0	24	6
Trichloroethene	30	0	0	30
Uranium (Metals)	30	0	27	3
Uranium, Dissolved	30	0	29	1
Uranium-234	30	0	30	0
Uranium-235	30	0	30	0
Uranium-238	30	0	29	1

*Missing parameters that were dissolved metals were not analyzed when the parent total metals were not detected in prior sampling events.

Table B.3. Percent Censored Report and Statistical Test Set Selected

Parameter	Total Samples (Nonmissing)	Uncensored	Censored	Percent Censored	Statistical Test Set
URGA					
Arsenic	30	19	11	37 %	3
Arsenic, Dissolved	30	15	15	50 %	2
Cadmium	30	1	29	97 %	1
Chromium	30	14	16	53 %	2
Chromium, Dissolved	30	3	27	90%	1
Lead	30	6	24	80 %	2
Mercury	30	0	30	100 %	1
Selenium	30	3	27	90 %	1
Technetium-99	30	6	24	80 %	2
Trichloroethene	30	30	0	0%	4/3*
Uranium	30	3	27	90%	1
Uranium, Dissolved	30	1	29	97%	1
Uranium-234	30	0	30	100 %	1
Uranium-235	30	0	30	100 %	1
Uranium-238	30	1	29	97 %	1

A list of the constituents with greater than or equal to 90% censored data is included in Table B.4, which summarizes the results of Statistical Test 1.

*Because equality of variance could not be confirmed, Statistical Test 4 was abandoned and Statistical Test 3, Nonparametric ANOVA, was performed.

Table B.4. Statistical Test 1: Limit of Detection

Parameter	LOD Values	$\frac{1}{2}$ LOD Values
URGA		
Cadmium (mg/L)	0.001	0.0005
Chromium, Dissolved (mg/L)	0.01	0.005
Mercury (mg/L)	0.0002	0.0001
Selenium (mg/L)	0.005	0.0025
Uranium (mg/L)	0.0002	0.0001
Uranium, Dissolved (mg/L)	0.0002	0.0001
Uranium-234 (pCi/L)	1.88	0.94
Uranium-235 (pCi/L)	0.471	0.235
Uranium-238 (pCi/L)	1.11	0.58

LOD = Limit of Detection; mg/L = milligrams per liter; pCi/L = picocuries per liter

SUMMARY OF CONCLUSIONS

The results for Statistical Test 1, LOD, are summarized in Table B.4. Table B.5 provides the summary of conclusions for the statistical analyses for the C-404 Landfill, including the statistical tests performed, the attachment number, well type, parameter, and results of each statistical test. Results of Statistical Test 2, Statistical Test 3, and Statistical Test 4 are presented in Attachments 1 through 6.

In summary, Statistical Test 2, Test of Proportions, for dissolved arsenic, chromium, lead, and Tc-99 and Statistical Test 3, Nonparametric ANOVA, for total arsenic in the URGA indicated no statistical evidence of releases of these contaminants from the C-404 Landfill.

Statistical Test 4, Parametric ANOVA, could not be used for TCE in the URGA because there was no evidence of equality of variance. Thus, Statistical Test 4 was abandoned and Statistical Test 3, Nonparametric ANOVA, was performed. Statistical Test 3 showed there was no evidence of contamination of TCE in any compliance well.

Table B.5. Summary of Conclusions from the Statistical Analyses for the C-404 Hazardous Waste Landfill for the January 2014 Data Set

Attachment	RGA Well Type	Parameter	Applied Statistical Test	Results
B1	URGA	Arsenic	Statistical Test 3, Nonparametric ANOVA	No statistically significant evidence of contamination from the C-404 Landfill in compliance wells.
B2	URGA	Arsenic, Dissolved	Statistical Test 2, Test of Proportions	No statistically significant evidence of contamination from the C-404 Landfill in compliance wells.
B3	URGA	Chromium	Statistical Test 2, Test of Proportions	No statistically significant evidence of contamination from the C-404 Landfill in compliance wells.
B4	URGA	Lead	Statistical Test 2, Test of Proportions	No statistically significant evidence of contamination from the C-404 Landfill in compliance wells.
B5	URGA	Technetium-99	Statistical Test 2 Test of Proportions	No statistically significant evidence of contamination from the C-404 Landfill in compliance wells.
B6	URGA	Trichloroethene	Statistical Test 4 Parametric ANOVA	Because equality of variance could not be confirmed, Statistical Test 4 was abandoned and Statistical Test 3, Nonparametric ANOVA, was performed. No statistically significant evidence of contamination in compliance wells.

RGA = Regional Gravel Aquifer; URGA = Upper Regional Gravel Aquifer

Calculate Critical Values

Average Background Ranking = 16.792

	Well No.	C _i	(R _i) _{avg} - (R _b) _{avg}	Conclusion
BG Well	MW93			
BG Well	MW420			
	MW84	9.367	6.38	not contaminated
	MW87	9.367	-2.96	not contaminated
	MW90A	9.367	-9.88	not contaminated

mg/L = milligrams per liter

BG=background

DL=detection limit

All data sets represent 1/2DL values for nondetects.

Bolded values indicate a detected result.

If $(R_i)_{avg} - (R_b)_{avg} > C_i$, then there is evidence that the compliance well is contaminated.

CONCLUSION: Since $(R_i)_{avg} - (R_b)_{avg} < C_i$ for all MW84, MW87 and MW90A, there is no statistically significant evidence of contamination from C-404 in these downgradient compliance test wells.

Section 5.2.2, *Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities, Interim Guidance*, U.S. EPA, 1989

*Detection limit was 0.001 mg/L for all samples included in the graph.

Jan-14	0.00536	0.0005	0.00412	0.00181	0.0005
Jul-14	0.0025	0.0025	0.0025	0.0025	0.0025

mg/L = milligrams per liter

BG=background

DL=detection limit

All data sets represent 1/2DL values for nondetects.

Bolded values indicate a detected result.

¹Test of Proportions

Calculate the number of detections in background wells vs. compliance wells.

X=	5	X=number of samples above DL in background wells
Y=	10	Y=number of samples above DL in compliance wells
n _b =	12	n _b =count of background well results/samples analyzed
n _c =	18	n _c =count of compliance well results/samples analyzed
n=	30	n=total number of samples

$$\begin{aligned} P &= 0.500 & P &= (x+y)/n \\ nP &= 15 & n &= n_b + n_c \\ n(1-P) &= 15 \end{aligned}$$

NOTE: If nP and n(1-P) are both ≥ 5 , then the normal approximation may be used.

$$\begin{aligned} P_b &= 0.417 & P_b &= \text{proportion of detects in background wells} \\ P_c &= 0.556 & P_c &= \text{proportion of detects in compliance wells} \\ S_D &= 0.186 & S_D &= \text{standard error of difference in proportions} \\ Z &= -0.745 & Z &= (P_b - P_c)/S_D \\ \text{absolute value of } Z &= 0.745 \end{aligned}$$

If the absolute value of Z exceeds the 97.5th percentile value of 1.96 from the standard normal distribution, this provides statistically significant evidence at the 5% significance level that the proportion of detects in one group of data exceeds the proportion of detects in the other group.

CONCLUSION: Because the absolute value of Z is less than 1.96, there is no statistical evidence that the proportion of samples with detected results differs between the background well and compliance well samples.

Aug-13	3.165	17.9	18.8	4.88	7.25
Jan-14	8.1	16.8	8.1	8.1	8.1
Jul-14	8.4	7.85	8.05	8.4	8.05

pCi/L = picocuries per liter

BG=background

DL=detection limit

Data represent 1/2DL values for nondetects.

Bolded values indicate a detected result.

¹Test of Proportions

Calculate the number of detections in background wells vs. compliance wells.

X=	4	X=number of samples above DL in background wells
Y=	2	Y=number of samples above DL in compliance wells
n _b =	12	n _b =count of background well results/samples analyzed
n _c =	18	n _c =count of compliance well results/samples analyzed
n=	30	n=total number of samples

$$\begin{aligned}
 P &= 0.200 & P &= (x+y)/n \\
 nP &= 6 & n &= n_b + n_c \\
 n(1-P) &= 24
 \end{aligned}$$

NOTE: If nP and n(1-P) are both ≥ 5 , then the normal approximation may be used.

$$\begin{aligned}
 P_b &= 0.333 & P_b &= \text{proportion of detects in background wells} \\
 P_c &= 0.111 & P_c &= \text{proportion of detects in compliance wells} \\
 S_D &= 0.149 & S_D &= \text{standard error of difference in proportions} \\
 Z &= 1.491 & Z &= (P_b - P_c) / S_D \\
 \text{absolute value of } Z &= 1.491
 \end{aligned}$$

If the absolute value of Z exceeds the 97.5th percentile value of 1.96 from the standard normal distribution, this provides statistically significant evidence at the 5% significance level that the proportion of detects in one group of data exceeds the proportion of detects in the other group.

CONCLUSION: Because the absolute value of Z is less than 1.96, there is no statistical evidence that the proportion of samples with detected results differs between the background well and compliance well samples.

Jul-14	29	8	22	18	6
R_i	217.5		133.5	93	21
$(R_i)_{avg}$	18.1		22.3	15.5	3.5
R_i^2/n_i	3942.2		2970.4	1441.5	73.5

$$\sum R_i^2/n_i = 8427.6$$

$$\begin{aligned} K &= 4 \\ N &= 30 \end{aligned}$$

Calculation of Kruskal-Wallis Statistic

$$\begin{aligned} H &= 15.743 & \text{Kruskal-Wallis Statistic} & H = [12/N(N+1)*\sum R_i^2/n_i] - 3(N+1) \\ H' &= 15.753 & \text{Corrected Kruskal-Wallis} & H' = H/[1-(\sum T_i/N^3-N)] \\ \chi^2_{crit} &= 7.815 & 3 & \text{degrees of freedom at the 5% significance level} \end{aligned}$$

NOTE: $H' > \chi^2_{crit}$

If $H' \leq \chi^2_{crit}$, the data from each well come from the same continuous distribution and hence have the same median concentrations of a specific constituent.

If $H' > \chi^2_{crit}$, reject the null hypothesis and calculate the critical difference for well comparisons to the background.

$$\begin{aligned} K-1 &= 3 & \alpha/(K-1) &= 0.01667 & Z(\alpha/(K-1))^{**} &= 2.128 \\ \alpha &= 0.05 & 1-(\alpha/K-1) &= 0.983 \end{aligned}$$

NOTE *Table 1, Appendix B, *Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities, Interim Guidance* (EPA 1989).

**Table 4, Appendix B, *Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities, Interim Guidance* (EPA 1989).

**Attachment B6. Statistical Test 3, Nonparametric ANOVA,
July 2014 Trichloroethene URGA**

Calculate Critical Values

Average Background Ranking = 18.1

	Well No.	C _i	(R _i) _{avg} - (R _b) _{avg}	Conclusion
BG Well	MW93			
BG Well	MW420			
	MW84	9.367	4.54	not contaminated
	MW87	9.367	-2.21	not contaminated
	MW90A	9.367	-14.63	not contaminated

If $(R_i)_{avg} - (R_b)_{avg} > C_i$, then there is evidence that the compliance well is contaminated.

CONCLUSION: Since $(R_i)_{avg} - (R_b)_{avg} < C_i$, there is no statistically significant evidence that downgradient compliance test wells are contaminated; however, the negative value indicates that background wells have elevated concentrations.

Section 5.2.2, *Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities, Interim Guidance* (EPA 1989).

WEST-GEO CERTIFICATION STATEMENT

THIS PAGE INTENTIONALLY LEFT BLANK

November 5, 2014
LKYBA10836-14-0011

Ms. Jennifer Johnson
LATA Sharp Remediation Services
P.O. Box 280,
Kevil, KY 42053

Subject: Statistical analysis of groundwater data for C-404 landfill

Dear Ms. Johnson:

I am submitting this statement as a supplementary document to the completed statistical analysis I performed on the groundwater data for the C-404 Landfill at the Paducah Gaseous Diffusion Plant.

As a Senior Environmental Engineer, with a doctorate in Civil Engineering and Professional Engineer license with the States of Tennessee and Georgia, I have twenty-two years of experience in the analysis and interpretation of environmental data.

For this project, the statistical analyses on groundwater data from January 2012 through July 2014 were performed in accordance with the C-404 Hazardous Waste Landfill Permit, Appendix C using Microsoft Excel 2010. The Excel files were saved in a format compatible with Microsoft Excel 1997-2003. The spreadsheets include the results for the following statistical tests:

- Test of Proportions
- Parametric Analysis of Variance (ANOVA)
- Nonparametric ANOVA

The statistical analyses procedures were based on the U.S. Environmental Protection Agency (USEPA) *Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities, Interim Final Guidance* (1989).

Please feel free to contact me via email (westor@geoconsultantsllc.com) or phone (865-242-7732) if you have any questions.

Sincerely,

Olivia R. West, Ph.D., P.E.

C-404 Monthly Inspection Summary^{1, 2, 3, 4}

Period of Inspection: January 2014

Leachate Level	Date (M/D/YY)	Level (inches deep)*	Inspector(s)
First monthly leachate level determination	1-30-14	32"	Jeff Boulton Jeff Boulton
Second monthly leachate level determination			
Third monthly leachate level determination		JLB 1-30-14	

* If the leachate level in the sump is at 3 feet (36 inches), then contact the appropriate personnel to initial removal and sampling of leachate AND when leachate is removed, complete the "C-404 Inspection Checklist for Leachate Removal."

NOTES:

1. If any item is found to be unacceptable and cannot be explained in the space available, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. Third quarter of calendar year inspection includes the annual leachate collection system inspection.
3. The original forms shall be kept on file in the facility operating record.
4. Upon completing the monthly inspections, e-mail Environmental Compliance the leachate level and whether or not the leachate needs to be sampled or removed.

C-404 Monthly Inspection Summary^{1, 2, 3, 4}

Period of Inspection: January, February 2014

Leachate Level	Date (M/D/YY)	Level (inches deep)*	Inspector(s)
First monthly leachate level determination	1-30-14	32"	Jeff Boulton Jeff Boulton
Second monthly leachate level determination	2-17-14	38"	Jeff Boulton Jeff Boulton
Third monthly leachate level determination		JLB 2-17-14	

* If the leachate level in the sump is at 3 feet (36 inches), then contact the appropriate personnel to initial removal and sampling of leachate AND when leachate is removed, complete the "C-404 Inspection Checklist for Leachate Removal."

NOTES:

1. If any item is found to be unacceptable and cannot be explained in the space available, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. Third quarter of calendar year inspection includes the annual leachate collection system inspection.
3. The original forms shall be kept on file in the facility operating record.
4. Upon completing the monthly inspections, e-mail Environmental Compliance the leachate level and whether or not the leachate needs to be sampled or removed.

C-404 Monthly Inspection Summary^{1, 2, 3, 4}

Period of Inspection: January, February, March 2014

Leachate Level	Date (M/D/YY)	Level (inches deep)*	Inspector(s)
First monthly leachate level determination	1-30-14	32"	Jeff Boulton Jeff Boulton
Second monthly leachate level determination	2-17-14	38"	Jeff Boulton Jeff Boulton
Third monthly leachate level determination	3-18-14	16"	Jeff Boulton Jeff Boulton

* If the leachate level in the sump is at 3 feet (36 inches), then contact the appropriate personnel to initial removal and sampling of leachate AND when leachate is removed, complete the "C-404 Inspection Checklist for Leachate Removal."

NOTES:

1. If any item is found to be unacceptable and cannot be explained in the space available, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. Third quarter of calendar year inspection includes the annual leachate collection system inspection.
3. The original forms shall be kept on file in the facility operating record.
4. Upon completing the monthly inspections, e-mail Environmental Compliance the leachate level and whether or not the leachate needs to be sampled or removed.

C-404 Inspection Checklist for Leachate Removal^{1, 2, 3}

Leachate Removal Inspection		YES	NO	N/A	Date (M/D/YY)	Volume (gallons)
Was any removal necessary during the quarter?		✓			2-19-14	1200
Has any leachate removed during the quarter been sampled?		✓			2-27-14	
Date of superficial inspection upon removal of leachate.		✓			2-19-14	
Date of sampling of leachate after removal.		✓			2-27-14	↓
Item No.	Inspection Item	Item Description	Inspection Results		Comments	
			A	U		
A	Leachate Pit	Interior malformations	✓			
		Exterior malformations	✓			
Inspector: <u>Jeff Boulton</u> (Printed Name)			Signature: <u>Jeff Boulton</u> Date: <u>2-19-14</u> Time: <u>1426</u>			

A=Acceptable

U=Unacceptable

NOTES:

1. This form is completed if the leachate level in the sump is at **3 feet (36 inches)** and is being removed. Ensure the appropriate personnel have been contacted and complete the information above.
2. If any item is found to be unacceptable, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
3. The original forms shall be kept on file in the facility operating record.

Leachate was sampled at C-752-A from poly container
RFD 118261-01. Jeff Boulton 2-27-14

C-404 Quarterly Inspection Checklist^{1, 5}

Item No.	Inspection Item	Item Description	Inspection Results		Comments/Observations
			A	U	
A	Warning Signs	Four signs around landfill	/		
B	Vegetative Cover ²	Gully erosion depth > 6 inches	/		
		Vegetative die-off	/		
		Varmint intrusion/burrowing from animals	/		
		Overgrowth	/		
		Depressions	/		
C	Ditches ³	Debris in ditches	/		
		Excessive sediment	/		
		Drainage	/		
		Erosion	/		
D	Anchor Trench ⁴	Washouts or depressions	/		
		Lack of discharge	/		
		Unusual volume or color	/		
		Drainage (4 drains from landfill)	/		
E	Leachate System	Level	/		
		Cracks or damage	/		
Inspector: <u>Jeff Boulton</u> (Printed Name)			Signature: <u>Jeff Boulton</u> Date: <u>3-18-14</u> Time: <u>1:32Z</u>		

A=Acceptable

U=Unacceptable

NOTES:

1. If any item is found to be unacceptable, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. For Item No. B, the vegetative cover shall be mowed regularly during the active growing season to discourage the growth of weeds, competitive species, or deep-rooted vegetation. Mowing shall be conducted using a sickle-type mower to prevent airborne contaminants. A radiation work permit will be required. Any erosion damage greater than 6 inches will be repaired by restoring to its original grade and reseeding. Differential settlement will be repaired by restoring site to its original grade and reseeding.
3. For Item No. C, blockage of or damage to the system shall be repaired by removing debris and accumulated sediment and restoring the ditch to its original grade. Ditches shall be reseeded and additional gravel shall be installed as needed.
4. For Item No. D, drainage pipe failures shall be repaired by removing the failed pipe, installing a new section, and replacing the fill material as necessary.
5. The original forms shall be kept on file in the facility operating record.

C-404 Monthly Inspection Summary^{1, 2, 3, 4}

Period of Inspection: April 2014

Leachate Level	Date (M/D/YY)	Level (inches deep)*	Inspector(s)
First monthly leachate level determination	<u>4-24-14</u>	<u>36.4</u>	<u>Jeff Boulton</u> <u>Jeff Boulton</u>
Second monthly leachate level determination			<u>JB A-24-14</u>
Third monthly leachate level determination			

* If the leachate level in the sump is at 3 feet (36 inches), then contact the appropriate personnel to initial removal and sampling of leachate AND when leachate is removed, complete the "C-404 Inspection Checklist for Leachate Removal."

NOTES:

1. If any item is found to be unacceptable and cannot be explained in the space available, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. Third quarter of calendar year inspection includes the annual leachate collection system inspection.
3. The original forms shall be kept on file in the facility operating record.
4. Upon completing the monthly inspections, e-mail Environmental Compliance the leachate level and whether or not the leachate needs to be sampled or removed.

C-404 Monthly Inspection Summary^{1, 2, 3, 4}

Period of Inspection: May 2014

Leachate Level	Date (M/D/YY)	Level (inches deep)*	Inspector(s)
First monthly leachate level determination		JB 5-7-14	
Second monthly leachate level determination	5-7-14	3	Jeff Boulton Jeff Boulton
Third monthly leachate level determination		JB 5-7-14	

after leachate was removed. JB 5-7-14

* If the leachate level in the sump is at 3 feet (36 inches), then contact the appropriate personnel to initial removal and sampling of leachate AND when leachate is removed, complete the "C-404 Inspection Checklist for Leachate Removal."

NOTES:

1. If any item is found to be unacceptable and cannot be explained in the space available, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. Third quarter of calendar year inspection includes the annual leachate collection system inspection.
3. The original forms shall be kept on file in the facility operating record.
4. Upon completing the monthly inspections, e-mail Environmental Compliance the leachate level and whether or not the leachate needs to be sampled or removed.

C-404 Monthly Inspection Summary^{1, 2, 3, 4}

Period of Inspection: June 2014

Leachate Level	Date (M/D/YY)	Level (inches deep)*	Inspector(s)
First monthly leachate level determination		<u>JB 6-5-14</u>	
Second monthly leachate level determination			
Third monthly leachate level determination	<u>6-5-14</u>	<u>11</u>	<u>Jeff Boulton</u> <u>Jeff Danlon</u>

* If the leachate level in the sump is at **3 feet (36 inches)**, then contact the appropriate personnel to initial removal and sampling of leachate AND when leachate is removed, complete the "**C-404 Inspection Checklist for Leachate Removal**."

NOTES:

1. If any item is found to be unacceptable and cannot be explained in the space available, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. Third quarter of calendar year inspection includes the annual leachate collection system inspection.
3. The original forms shall be kept on file in the facility operating record.
4. Upon completing the monthly inspections, e-mail Environmental Compliance the leachate level and whether or not the leachate needs to be sampled or removed.

C-404 Inspection Checklist for a 24-Hour Rain Event^{1, 2, 3}

Item No.	Inspection Item	Item Description	Inspection Results		Comments/Observations	
			A	U		
A	Vegetative Cover	Gully erosion depth > 6 inches	✓		Rained 2.5" on 6-3-14 and 3.5" over night into 6-4-14. <i>Jeff Scarsella</i>	
		Vegetative die-off	✓			
		Varmint intrusion/burrowing from animals	✓			
		Overgrowth	✓			
		Depressions	✓			
B	Ditches	Debris in ditches	✓			
		Excessive sediment	✓			
		Drainage	✓			
		Erosion	✓			
C	Anchor Trench	Washouts or depressions	✓			
		Lack of discharge	✓			
		Unusual volume or color	✓			
		Drainage (4 drains from landfill)	✓		✓	
Inspector: <u>Jeff Boulton</u> (Printed Name)			Signature:	<u>Jeff Boulton</u>		
			Date:	<u>6-5-14</u>	Time: <u>1053</u>	

A=Acceptable

U=Unacceptable

NOTES:

1. This checklist is used after a major storm in the event that 5.8 inches falls in 24 hours.
2. If any item is found to be unacceptable, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
3. The original forms shall be kept on file in the facility operating record.

C-404 Inspection Checklist for Leachate Removal^{1, 2, 3}

Leachate Removal Inspection		YES	NO	N/A	Date (M/D/YY)	Volume (gallons)
Was any removal necessary during the quarter?		✓			5-7-14	1200
Has any leachate removed during the quarter been sampled?		✓			6-18-14	
Date of superficial inspection upon removal of leachate.		✓			5-7-14	
Date of sampling of leachate after removal.		✓			6-18-14	ω C-752-A RFD-119508-01
Item No.	Inspection Item	Item Description	Inspection Results		Comments	
			A	U		
A	Leachate Pit	Interior malformations	✓		Done on 5-7-14	
		Exterior malformations	✓		Done on 5-7-14	
Inspector: <u>Jeff Boulton</u> (Printed Name)			Signature: <u>Jeff Boulton</u> Date: <u>6-18-14</u> Time: <u>1437</u>			

A=Acceptable

U=Unacceptable

NOTES:

1. This form is completed if the leachate level in the sump is at **3 feet (36 inches)** and is being removed. Ensure the appropriate personnel have been contacted and complete the information above.
2. If any item is found to be unacceptable, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
3. The original forms shall be kept on file in the facility operating record.

C-404 Quarterly Inspection Checklist^{1, 5}

Item No.	Inspection Item	Item Description	Inspection Results		Comments/Observations
			A	U	
A	Warning Signs	Four signs around landfill	✓		
B	Vegetative Cover ²	Gully erosion depth > 6 inches	✓		
		Vegetative die-off	✓		
		Varmint intrusion/burrowing from animals	✓		
		Overgrowth	✓		
		Depressions	✓		
C	Ditches ³	Debris in ditches	✓		
		Excessive sediment	✓		
		Drainage	✓		
		Erosion	✓		
D	Anchor Trench ⁴	Washouts or depressions	✓		
		Lack of discharge	✓		
		Unusual volume or color	✓		
		Drainage (4 drains from landfill)	✓		
E	Leachate System	Level	✓		<i>11 inches</i>
		Cracks or damage	✓		
Inspector: <u>Jeff Boulton</u> (Printed Name)			Signature: <u>Jeff Boulton</u> Date: <u>6-3-14</u> Time: <u>1053</u>		

A=Acceptable

U=Unacceptable

NOTES:

1. If any item is found to be unacceptable, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. For Item No. B, the vegetative cover shall be mowed regularly during the active growing season to discourage the growth of weeds, competitive species, or deep-rooted vegetation. Mowing shall be conducted using a sickle-type mower to prevent airborne contaminants. A radiation work permit will be required. Any erosion damage greater than 6 inches will be repaired by restoring to its original grade and reseeding. Differential settlement will be repaired by restoring site to its original grade and reseeding.
3. For Item No. C, blockage of or damage to the system shall be repaired by removing debris and accumulated sediment and restoring the ditch to its original grade. Ditches shall be reseeded and additional gravel shall be installed as needed.
4. For Item No. D, drainage pipe failures shall be repaired by removing the failed pipe, installing a new section, and replacing the fill material as necessary.
5. The original forms shall be kept on file in the facility operating record.

C-404 Monthly Inspection Summary^{1, 2, 3, 4}

Period of Inspection: July 2014

Leachate Level	Date (M/D/YY)	Level (inches deep)*	Inspector(s)
First monthly leachate level determination	7-8-14	17	<i>Jeff Boulton</i> Jeff Boulton
Second monthly leachate level determination			
Third monthly leachate level determination		<i>JB-7-8-14</i>	

* If the leachate level in the sump is at 3 feet (36 inches), then contact the appropriate personnel to initial removal and sampling of leachate AND when leachate is removed, complete the "C-404 Inspection Checklist for Leachate Removal."

NOTES:

1. If any item is found to be unacceptable and cannot be explained in the space available, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. Third quarter of calendar year inspection includes the annual leachate collection system inspection.
3. The original forms shall be kept on file in the facility operating record.
4. Upon completing the monthly inspections, e-mail Environmental Compliance the leachate level and whether or not the leachate needs to be sampled or removed.

C-404 Monthly Inspection Summary^{1, 2, 3, 4}

Period of Inspection: August 2014

Leachate Level	Date (M/D/YY)	Level (inches deep)*	Inspector(s)
First monthly leachate level determination	<u>JB 8-9-14</u>		
Second monthly leachate level determination	<u>8-9-14</u>	<u>17.8</u>	<u>Jeff Boulton</u> <u>Jeff Boulton</u>
Third monthly leachate level determination		<u>JB 8-9-14</u>	

* If the leachate level in the sump is at 3 feet (36 inches), then contact the appropriate personnel to initial removal and sampling of leachate AND when leachate is removed, complete the "C-404 Inspection Checklist for Leachate Removal."

NOTES:

1. If any item is found to be unacceptable and cannot be explained in the space available, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. Third quarter of calendar year inspection includes the annual leachate collection system inspection.
3. The original forms shall be kept on file in the facility operating record.
4. Upon completing the monthly inspections, e-mail Environmental Compliance the leachate level and whether or not the leachate needs to be sampled or removed.

C-404 Monthly Inspection Summary^{1, 2, 3, 4}

Period of Inspection: September 2014

Leachate Level	Date (M/D/YY)	Level (inches deep)*	Inspector(s)
First monthly leachate level determination			
Second monthly leachate level determination	JB	9-15-14	
Third monthly leachate level determination	9-15-14	18.2	Jeff Boulton Jeff Bar

* If the leachate level in the sump is at 3 feet (36 inches), then contact the appropriate personnel to initial removal and sampling of leachate AND when leachate is removed, complete the "C-404 Inspection Checklist for Leachate Removal."

NOTES:

1. If any item is found to be unacceptable and cannot be explained in the space available, the inspector must identify the specific observation and nature of the problem on the "C-404 Inspection Addendum" Form.
2. Third quarter of calendar year inspection includes the annual leachate collection system inspection.
3. The original forms shall be kept on file in the facility operating record.
4. Upon completing the monthly inspections, e-mail Environmental Compliance the leachate level and whether or not the leachate needs to be sampled or removed.

APPENDIX D

C-404 HAZARDOUS WASTE LANDFILL
GROUNDWATER FLOW RATE AND DIRECTION

THIS PAGE INTENTIONALLY LEFT BLANK

2014 ANNUAL REPORT OF THE C-404 LANDFILL HYDRAULIC FLOW RATE AND DIRECTION

The C-404 Hazardous Waste Landfill (C-404 Landfill) Permit requires annual determination of average hydraulic flow rate and direction of flow in the uppermost aquifer. The uppermost aquifer below C-404 Landfill is the Regional Gravel Aquifer (RGA). Water level measurements currently are taken from several wells at the perimeter of the C-404 Landfill on a semiannual basis. The water levels used for this analysis (taken on January 30 and July 30 and 31, 2014) were measured as closely as possible and within a 24-hour period to ensure the comparability of the data. These measurements were used to plot the potentiometric surface of the upper RGA for the January and July 2014 sampling events.

Contours for each potentiometric surface were drawn after water-level data were corrected for barometric pressure; groundwater hydraulic gradients then are calculated from the contours. The average of the gradients measured during this reporting period is the annual average groundwater hydraulic gradient for the upper RGA and is calculated at 1.74×10^{-3} ft/ft.

The hydraulic conductivity (K) values reported in the *Resource Conservation and Recovery Act (RCRA) Part B Permit Modification for Inclusion of C-404 Low-Level Radioactive/Hazardous Waste Landfill* (Clausen et al. 1992) were determined by multi-well testing and range from 21 to 140 ft/day (7.41×10^{-3} to 4.94×10^{-2} cm/s).

Multiplication of the hydraulic gradient (i) and the hydraulic conductivity (K) yields the specific discharge (q) for a unit area of the RGA. Annual average linear-flow velocity (v) is calculated by multiplying the hydraulic conductivity by the gradient and dividing by the porosity (n). It is assumed that (n) equals 25 percent in the RGA beneath the C-404 Landfill.

Table D.1 summarizes the annual average results of the calculations. Table D.2 presents the calculation information for the annual groundwater flow rate. The January and July potentiometric surface data of the upper RGA are presented in Tables D.3 and D.4, and potentiometric surface maps are presented in Figures D.1 and D.2.

Table D.1. C-404 Landfill Annual Average Groundwater Flow Rate for 2014

Hydraulic Conductivity (K) Range	Annual Average Specific Discharge (q) ft/day (cm/s)	Annual Average Linear Flow Velocity (v) ft/day cm/s)
High K	0.24 (8.60×10^{-5})	0.97 (3.44×10^{-4})
Low K	0.04 (1.29×10^{-5})	0.15 (5.16×10^{-5})

The potentiometric contours depict the directions of hydraulic flow during each sampling event. Hydraulic flow direction beneath the C-404 Landfill generally trends northward, but commonly varies from northeast to northwest.

Table D.2. Calculation Information for the C-404 Landfill Annual Groundwater Flow Rate 2014

Upper RGA K = 21 ft/d
