July 12, 2023

Mr. David Ruckstuhl, Prime Contracts Manager
Four Rivers Nuclear Partnership, LLC
5511 Hobbs Road
Kevil, Kentucky 42053

PPPO-02-10024761-23B

Dear Mr. Ruckstuhl:

DE-EM0004895: APPROVAL OF UPDATE OF DELIVERABLE NO. 42, ENVIRONMENTAL MONITORING PLAN FISCAL YEAR 2023, CP2-ES-0006/FR9

Reference: Letter from M. Redfield to M. Fultz, "Four Rivers Nuclear Partnership, LLC—For Approval—Deliverable No.42—FINAL *Environmental Monitoring Plan Fiscal Year 2023 Paducah Gaseous Diffusion Plant, Paducah, Kentucky,* CP2-ES-0006/FR9," (FRNP-23-7359), dated June 28, 2023

The U.S. Department of Energy reviewed and approves the Four Rivers Nuclear Partnership, LLC, Deliverable No. 42, Final *Environmental Monitoring Plan Fiscal Year 2023 Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, CP2-ES-0006/FR9.

If you have any questions or require additional information, please contact Richard Bonczek at (859) 321-7127.

Sincerely,

MARCIA FULTZ

EXECUTIVE SUMMARY

This Paducah Site Environmental Monitoring Plan (EMP) for fiscal year (FY) 2023 is intended to document the rationale, sampling frequency, parameters, and analytical methods for environmental monitoring (EM) activities at the Paducah Site and provide information on site characteristics, environmental pathways, dose assessment methodologies, and quality assurance management.

EM at the Paducah Site consists of effluent monitoring and environmental surveillance activities and supports the evaluation and assessment of unplanned releases. Monitoring is conducted for a variety of media including air, surface water, groundwater, and sediment.

This EMP is comprised of the main text that details rationale and objectives, as well as five appendices. Appendix A is a summary of the Paducah Site permits and agreements; Appendix B is a well inventory; Appendix C lists all individual sampling programs, along with their sampling frequencies, methods, action limits, and parameter lists; Appendix D contains the quality assurance project plan (QAPP) for executing the work described in this EMP; and Appendix E contains supplemental per- and polyfluoroalkyl substances (PFAS) QAPP worksheets related to a screening assessment that will be performed in FY 2023. Appendix D should be referenced for other QAPP worksheets that apply to the PFAS screening assessment.

Sampling frequencies and sampling parameters that were modified for a sampling program that was permit-driven or collected as a result of a Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) or Resource Conservation and Recovery Act (RCRA) decision document were changed only if the permit allowed the change. Data collected under existing permits and under CERCLA or RCRA decision documents will continue to be evaluated in FY 2023. If changes are deemed appropriate based on trending analyses, they will be proposed via a permit modification or decision document change (as applicable) and implemented immediately after approval by the regulatory agencies. These changes will be incorporated in the FY 2024 EMP. If sampling is modified due to a change in a sampling approach or by physical limitations, such as a dry well, then those conditions will be documented in the assessment file for that given project.

The Energy Policy Act of 1992 provided for lease of the enrichment facilities to a commercial entity that operated the enrichment facilities from 1998 to 2013. In 2014, the leased facilities were returned to the U.S. Department of Energy (DOE) control, and a DOE contractor began management of the facilities for DOE. These returned facilities are undergoing deactivation in preparation for decommissioning. DOE also is responsible for environmental remediation of the site. DOE is conducting environmental remediation activities under CERCLA. DOE also has oversight of the Depleted Uranium Hexafluoride (DUF_6) Conversion Facility, which converts cylinders of DUF_6 to a more stable form for reuse and/or disposal. Changes to the sampling programs reflected in the FY 2023 EMP include, but are not limited to, the following actions, which are described later in more detail.

- **PFAS Sampling.** A screening assessment that includes additional PFAS data is needed to perform an initial sitewide evaluation for the presence of PFAS in environmental media and drinking water[1] at the Paducah Site. The supplemental PFAS QAPP worksheets containing the requirements for the screening assessment are included in Appendix E.

[1] For the purposes of the PFAS sampling described herein, "drinking water" refers to potable water from the site water treatment plant (C-611) and does not include bottled drinking water provided by an off-site vendor and available to site personnel.

- **Northwest Plume Operations and Maintenance Program.** Based on trichloroethene (TCE) and technetium-99 (Tc-99) trends, the sampling frequency for MW339, MW340, MW455, and MW456 will be changed from semiannual to quarterly.

- **C-400 Monitoring Wells Program.** Analyses of polychlorinated biphenyls and polycyclic aromatic hydrocarbons for MW405 Port 5, MW406 Port 5, MW407 Port 4, and MW408 Port 5 are no longer needed to support C-400 remedial action(s). These analyses will be removed from this program.

- **Water Policy Boundary Monitoring Program.** In FY 2022, vinyl chloride was detected above the maximum containment level (MCL) in R40 samples collected by the Kentucky Division of Waste Management Agreement in Principle and DOE. Multiple sampling events were conducted at R40 in FY 2022 and the pump and tubing were replaced in the well. After the pump and tubing were replaced and additional samples were collected, vinyl chloride was not detected above the MCL. In order to continue evaluating conditions at the well, R40 will be sampled quarterly for TCE and degradation products in FY 2023.

- **Environmental Surveillance Monitoring Program.** Based on TCE and Tc-99 trends, the sampling frequency for MW549, MW550, and MW551 will be changed from biennial to semiannual, and the sampling frequency for MW169, MW477, MW491, and MW492 will be changed from biennial to annual. Based on data trends, polychlorinated biphenyl analyses will be removed for MW182, MW418, and MW419. Additionally, in support of assessing the impact of potential faulting in the McNairy Formation at the site, MW346 and MW347 are being added to the annual sampling program.

- **Sediment Monitoring.** The background sediment location in Massac Creek, S28, is no longer safely accessible due to road construction and design changes to the highway that provided access for sampling. A new background location, S29, has been established along Massac Creek to replace S28.

- **External Gamma and Neutron Radiological Monitoring.** Background thermoluminescent dosimeter (TLD) locations, TLD-54 and TLD-85, were removed from the surveillance network in January 2022 due to not having access to the properties where the TLDs were located. An evaluation was performed and it was determined that these TLDs would not be replaced with new background TLDs.

- **Kentucky Pollutant Discharge Elimination System Permit.** The Paducah Site discharges waste waters under Kentucky Pollutant Discharge Elimination System (KPDES) Permit KY0004049. The Paducah Site has been operating administratively under the prior KPDES Permit that expired on August 30, 2022, while the Kentucky Division of Water (KDOW) processed the KPDES permit renewal application. KDOW issued the new permit in December 2022, and the new permit became effective on February 1, 2023. New permit requirements, in addition to the previous requirements, include phosphorous reporting at Outfalls 006, 009, 015, 016, and 017; temperature reporting limits at Outfalls 001, 002, and 008; mercury reporting limits at Outfall 008; and total residual chlorine reporting limits at Outfalls 001 and 006. Also, total suspended solids and oil and grease reporting limits have been assigned to Outfalls 002, 008, 009, 010, 011, 012, 015, 016, and 017. This EMP has been revised to reflect the new KPDES permit monitoring changes.

1. INTRODUCTION

1.1 PURPOSE

This Paducah Site Environmental Monitoring Plan (EMP) for fiscal year (FY) 2023 is intended to document the rationale, sampling frequency, parameters, and analytical methods for environmental monitoring (EM) activities at the Paducah Site and provide information on site characteristics, environmental pathways, dose assessment methodologies, and quality assurance (QA) management. Guidance for EM is included in U.S. Department of Energy (DOE) Order (O) 436.1, *Departmental Sustainability*; DOE O 458.1, *Radiation Protection of the Public and the Environment*; DOE-HDBK-1216-2015, *Environmental Radiological Effluent Monitoring and Environmental Surveillance* (DOE 2015), hereinafter identified as the Radiological Guide; and Commonwealth of Kentucky and federal regulations that implement federal environmental laws. The purpose of the Radiological Guide is to identify procedures, systems, methods, instruments, and practices that may be used to plan and implement radiological effluent monitoring and environmental surveillance that meet the requirements in DOE O 458.1.

This FY 2023 EMP supports meeting requirements in DOE O 436.1 and DOE O 458.1 at the site. DOE O 436.1, *Departmental Sustainability*, requires that sites incorporate activities and programs to meet the goals of the Strategic Sustainability Performance Plan (SSPP), which are specified in Executive Order 13693. These environmental stewardship goals of the SSPP require sites to prevent pollution and eliminate waste; follow sustainable acquisition practices; encourage agency innovation; reduce greenhouse gas emissions; perform regional and local planning; execute and integrate high-performance sustainable design and green building best practices; and usher in electronic stewardship and data center energy efficiency. DOE O 458.1 establishes standards and requirements for DOE operations with respect to protection of the public and the environment against undue risk from radiation.

This EMP also supports permit requirements and supplements the ongoing Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) remedial investigations (RIs) being conducted at the Paducah Site under the Federal Facility Agreement (FFA) for the Paducah Gaseous Diffusion Plant (PGDP) (EPA 1998). In accordance with the Paducah Site Management Plan, the following CERCLA operable units (OUs) require investigation—C-400 Complex, surface water, groundwater, soils, burial grounds, facility decontamination and decommissioning, lagoons, soils and slabs, and depleted uranium hexafluoride (DUF_6) footprint underlying Soils OU (DOE 2021a). This EMP is integrated with OU investigations and/or remedial actions to help provide collection of optimal data sets.

1.2 SCOPE

EM at the Paducah Site consists of effluent monitoring and environmental surveillance activities and supports the evaluation and assessment of unplanned releases. Monitoring is conducted routinely for a variety of media including air, surface water, groundwater, and sediment. Effluent monitoring is the direct measurement or the collection and analysis of liquid discharges and gaseous emissions to the environment. Environmental surveillance is the direct measurement or the collection and analysis of ambient air, surface water, groundwater, sediment, and other media.

In order for DOE and Four Rivers Nuclear Partnership, LLC, (FRNP) to comply with applicable environmental, public health, and resource protection requirements cost-effectively, the EMP is evaluated and modified, as appropriate. These modifications may include adjusting the number of monitoring wells (MWs) that are sampled, changing sampling frequency of certain activities, or eliminating parameters to avoid duplication of data. As a contractor for DOE at the Paducah Site, FRNP evaluates optimization of

sampling efforts in order to provide a comprehensive data set to the affected projects. Changes to the EMP, as a result of these evaluations, will be documented in the EMP rationale section and in each specific project section in Appendix C of the EMP. Changes that occur and are implemented during the FY will be documented in the following year's EMP. Optimization of permit-required sampling also is performed, but will be implemented only when approved by the regulatory agencies.

The Paducah Site EMP is evaluated and modified, as appropriate, using the data quality objective (DQO) methodology on an FY basis (i.e., October 1 through September 30) (EPA 2006). Measurement quality objectives are addressed in Appendix D, the "Environmental Monitoring Quality Assurance Project Plan" (QAPP), which is consistent with the Programmatic QAPP (DOE 2022a). Project data, following data verification, data assessment, and data validation, are placed into and reported from the Paducah Oak Ridge Environmental Information System (OREIS). Data loaded into Paducah OREIS then is available to public stakeholders via the Portsmouth/Paducah Project Office Environmental Geographic Analytical Spatial Information System (PEGASIS). Results are published and made available to the public in the form of the Annual Site Environmental Report (ASER).

QA is assured through assessments and management reviews. At a minimum, a management review of a sampling activity mandated by a permit will be conducted on a quarterly basis.

Operational sampling included in the Title V air permit is considered outside the scope of the EMP. FRNP will implement the appropriate operational sampling. While this EMP addresses liquid effluent monitoring from the DUF_6 conversion facility, which is operated by Mid-America Conversion Services, LLC, (MCS) this EMP does not address gaseous emissions monitoring that is conducted by MCS in support of their air permit.

1.3 RATIONALE

The rationale for EM activities at the Paducah Site for FY 2023 is premised by the understanding that sampling frequency, sampling parameters, and analytical methods must be sufficient to meet regulatory and contractual requirements and support appropriate DOE orders and guidance cost-effectively.

Data collected under existing permits, National Emission Standards for Hazardous Air Pollutants (NESHAP) Management Plan (FRNP 2019), and under CERCLA or Resource Conservation and Recovery Act (RCRA) decision documents will continue to be evaluated in FY 2023. Sampling frequencies and sampling parameters that were modified for a sampling program that was permit-driven or collected as a result of a CERCLA or RCRA decision document were changed only if the permit or decision document allowed the change. If, during FY 2023, changes are deemed appropriate based on trending analyses, changes will be proposed via a permit modification or decision document change and implemented immediately after approval by the regulatory agencies. These changes will be incorporated in the FY 2024 Paducah Site EMP. If sampling is modified due to a change in a sampling approach or by physical limitations, such as a dry well, then those conditions will be documented in the assessment file for that given project.

Changes to the sampling programs reflected in the FY 2023 EMP include, but are not limited to, the following actions, which are described in more detail in Appendix C.

- **Per- and polyfluoroalkyl substances (PFAS) sampling.** A screening assessment that includes additional PFAS data is needed to perform an initial sitewide evaluation for the presence of PFAS in

environmental media and drinking water[2] at the Paducah Site. The supplemental PFAS QAPP worksheets containing the requirements for the screening assessment are included in Appendix E.

- **Northwest Plume Operations and Maintenance Program.** Based on trichloroethene (TCE) and technetium-99 (Tc-99) trends, the sampling frequency for MW339, MW340, MW455, and MW456 will be changed from semiannual to quarterly.

- **C-400 Monitoring Wells Program.** Analyses of polychlorinated biphenyls (PCBs) and polycyclic aromatic hydrocarbons for MW405 Port 5, MW406 Port 5, MW407 Port 4, and MW408 Port 5 are no longer needed to support C-400 remedial action(s). These analyses will be removed from this program.

- **Water Policy Boundary Monitoring Program.** In FY 2022, vinyl chloride was detected above the maximum containment level (MCL) in R40 samples collected by the Kentucky Division of Waste Management (KDWM) Agreement in Principle and DOE. Multiple sampling events were conducted at R40 in FY 2022 and the pump and tubing were replaced in the well. After the pump and tubing were replaced and additional samples were collected, vinyl chloride was not detected above the MCL. In order to continue evaluating conditions at the well, R40 will be sampled quarterly for TCE and degradation products in FY 2023.

- **Environmental Surveillance Monitoring Program.** Based on TCE and Tc-99 trends, the sampling frequency for MW549, MW550, and MW551 will be changed from biennial to semiannual, and the sampling frequency for MW169, MW477, MW491, and MW492 will be changed from biennial to annual. Based on data trends, PCB analyses will be removed for MW182, MW418, and MW419. Additionally, in support of assessing the impact of potential faulting in the McNairy Formation at the site, MW346 and MW347 are being added to the annual sampling program.

- **Sediment Monitoring.** The background sediment location in Massac Creek, S28, is no longer safely accessible due to road construction and design changes to the highway that provided access for sampling. A new background location, S29, has been established along Massac Creek to replace S28.

- **External Gamma and Neutron Radiological Monitoring.** Background thermoluminescent dosimeter (TLD) locations, TLD-54 and TLD-85, were removed from the surveillance network in January 2022 due to not having access to the properties where the TLDs were located. An evaluation was performed and it was determined that these TLDs would not be replaced with new background TLDs.

1.4 GENERAL CONSIDERATIONS

1.4.1 Site Description

The Paducah Site is located in a generally rural area of McCracken County, Kentucky [population approximately 65,000 (DOC 2020)]. Uranium enrichment ceased in May 2013. The uranium enrichment process facility consisted of a diffusion cascade and extensive support facilities. The cascade, including product and tails withdrawal, is housed in six large process buildings. The plant is located on a reservation consisting of approximately 3,556 acres in western McCracken County, 10 miles west of Paducah, Kentucky, [population approximately 25,000 (DOC 2020)] and 3.5 miles south of the Ohio River. DOE property has a heavily developed industrial area, with nonindustrial lands around it. Approximately 1,973 acres of the nonindustrial land are licensed to the Commonwealth of Kentucky as part of the West Kentucky

[2] For the purposes of the PFAS sampling described herein, "drinking water" refers to potable water from the site water treatment plant (C-611) and does not include bottled drinking water provided by an off-site vendor and available to site personnel.

Wildlife Management Area (WKWMA). The land licensed to the Commonwealth of Kentucky contains access roads and multiple rights-of-way for electrical transmission lines, but it is otherwise a mixture of woodlands and meadows.

The population within a 50-mile radius of the Paducah Site is about 534,000. Within a 10-mile radius of the Paducah Site, the population is approximately 87,750 (DOC 2020).

1.4.2 Site Background Information

Before World War II, the area now occupied by the Paducah Site was used for agricultural purposes. Numerous small farms produced various grain crops, provided pasture for livestock, and included large fruit orchards.

During World War II, a 16,126-acre tract was assembled for construction of Kentucky Ordnance Works, which subsequently was operated by the Atlas Powder Company until the end of the war. At that time, it was turned over to the Federal Farm Mortgage Corporation and then to the General Services Administration (GSA).

In 1950, the U.S. Department of Defense (DOD) and DOE's predecessor, the Atomic Energy Commission (AEC), began efforts to expand fissionable material production capacity. As part of this effort, the National Security Resources Board was instructed to designate power areas within a strategically safe area of the United States. Eight government-owned sites initially were selected as candidate areas. In October 1950, as a result of joint recommendations from DOD, U.S. Department of State, and AEC, President Harry S. Truman directed AEC to expand further production of atomic weapons. One of the principal facets of this expansion program was the provision for a new gaseous diffusion plant. On October 18, 1950, AEC approved the Paducah Site for uranium enrichment operations and formally requested the Department of the Army to transfer the site from GSA to AEC. Of the 7,566 acres acquired by the AEC, 1,361 acres subsequently were transferred to the Tennessee Valley Authority (Shawnee Fossil Plant Site), and approximately 2,700 acres were conveyed to the Commonwealth of Kentucky for wildlife conservation and for recreational purposes (WKWMA).

Although construction of PGDP was not complete until 1954, production of enriched uranium began in 1952. Recycled uranium from nuclear reactors was introduced into the PGDP enrichment cascades in 1953 and continued through 1964. In 1964, cascade feed material was switched solely to virgin-mined uranium. Use of recycled uranium resumed in 1969 and continued through 1976. In 1976, the practice of recycling uranium feed material from nuclear reactors was halted and never resumed. During the recycling time periods, Paducah received approximately 100,000 metric tons of recycled uranium containing an estimated 328 grams of plutonium-239 (Pu-239), 18,400 grams of neptunium-237 (Np-237), and 661,000 grams of Tc-99. The majority of the Pu-239 and Np-237 was separated out during the initial chemical conversion to uranium hexafluoride (UF_6). Concentrations of transuranics (e.g., Pu-239 and Np-237) and Tc-99 are believed to have been deposited on internal surfaces of process equipment and in waste products.

The Energy Policy Act of 1992 provided for lease of the enrichment facilities to a commercial entity that operated the enrichment facilities from 1998 to 2013. In 2014, the leased facilities were returned to DOE control, and a DOE contractor began management of the facilities for DOE.

PGDP was placed on the U.S. Environmental Protection Agency (EPA) National Priorities List on May 3, 1994, with an effective date of June 30, 1994. Environmental restoration is being addressed under an FFA with EPA and the Commonwealth of Kentucky (EPA 1998). The FFA became effective February 13, 1998.

1.5 PLAN OBJECTIVES

The following are the main objectives of this EMP.

- Ensure the early identification of potential adverse environmental impacts associated with DOE operations through effluent monitoring and environmental surveillance.
- Ensure that analytical work supporting EM is implemented using the following:
  - A consistent system for collecting, assessing, and documenting environmental data of known and documented quality;
  - A validated and consistent approach for sampling and analysis of samples to ensure laboratory data meet program-specific needs and requirements; and
  - An integrated sampling approach to avoid duplicative data collection.
- Support the "fully implemented status" of the Paducah Site Environmental Management System (EMS).
- Support the implementation of the Paducah Site Integrated Safety Management System (ISMS).
- Ensure integration of EMS into the site's ISMS.

Outputs from implementation of the EMP may be used to do the following:

- Provide data for use in the ASER, which informs the public about releases and potential impacts from DOE operations to human health and the environment;
- Identify DOE operations pollutant contributions;
- Provide ancillary data that may be required to assess the consequences of a spill or release;
- Identify significant changes in sample analytical results;
- Support or supplement data needs for CERCLA actions; and
- Provide a mechanism for long-term data collection needs under the FFA, when applicable.

A screening assessment for PFAS will be performed in FY 2023. The screening assessment is needed to perform an initial sitewide evaluation for the presence of PFAS in environmental media and drinking water at the Paducah Site. The screening assessment will include sampling of groundwater, treated groundwater, treated wastewater, surface water, landfill leachate, and drinking water. The supplemental PFAS QAPP worksheets containing the requirements for the screening assessment are included in Appendix E.

1.6 PLAN OVERVIEW

Section 1 is used to describe the program's relevant historical and current information. Section 2 of this document describes effluent monitoring for liquid and airborne radiological constituents. Section 3 discusses meteorological monitoring, which is collected from the National Weather Service. Section 4

addresses, by media, environmental surveillance activities undertaken to monitor the radiological impacts of DOE operations. Section 5 describes the dose calculation methods used for the site. Section 6 provides various reporting requirements. Section 7 lists references utilized in the preparation of this plan.

The appendices provide detailed information regarding site permits, groundwater well information, sampling program details, QA, and data management.

1.7 MEASURING FACILITY IMPACT

The Radiological Guide requires comparisons of the measured concentrations against measured concentrations at "background" locations. For the purposes of this EMP, a "background" location also is called a reference location and is defined as an area unaffected by releases from the Paducah Site. The area could, however, be impacted by other anthropogenic sources, such as emissions from industrial and commercial facilities. When no standards or criteria exist for contaminants that may have an impact on human health or the environment, comparisons to concentrations at reference locations can be made to determine if concentrations are significantly higher near the Paducah Site boundary.

2. EFFLUENT MONITORING

Effluent monitoring is the collection and analysis of samples or measurements of liquid and gaseous effluents for the purpose of characterizing and quantifying contaminants, assessing radiation exposures of members of the public, providing a means to control effluents at or near the point of discharge, and demonstrating compliance with applicable standards and permit requirements. It also helps evaluate the effectiveness of effluent treatment and control; helps identify potential environmental problems and evaluate the need for remedial actions or mitigation measures; supports permit revision and/or reissuance; and detects, characterizes, and helps to report unplanned releases. Effluent monitoring is initiated to demonstrate compliance with one or more federal or Commonwealth of Kentucky regulations, permit conditions, or environmental commitments made in environmental impact statements, environmental assessments, DOE Orders and guides, or other official documents. Table 1 lists the various routine effluent monitoring activities performed at the Paducah Site. This table includes monitoring of liquid effluents, but it does not include gaseous effluents by MCS operations or FRNP. MCS and FRNP conduct gaseous emissions monitoring on their systems, as described in Section 1 of this EMP. Ambient air monitoring, which is required by NESHAP, is included within this EMP. A summary of permits and compliance agreements is included in Appendix A.

Table 1. Routine Liquid Effluent Monitoring

Program	Number of Locations	Sampling Frequency
Surface Water		
C-746-S&T Landfills	3[a]	Quarterly
C-746-U Landfill	3[a]	Quarterly
Environmental Radiation Protection Program (ERPP) near Kentucky Pollutant Discharge Elimination System (KPDES) Outfalls	14	Monthly
KPDES[b]		
Outfall (K001)	1	Weekly
Outfall (K002, K004[c], K006, K008, K009, K010, K011, K012, K013, K015, K016, K017, K019[d], K020)	14	Monthly
Outfall Toxicity[e] (K001, K010[f], K011[g], K017)	4	Quarterly
CERCLA Outfall		
C001	1	Weekly and quarterly
Leachate		
C-746-S Landfill	1	As required and annually
C-746-U Landfill	1	As required and annually
C-404 Landfill	1	As required

[a] One location, L154, is cited in the Solid Waste Landfill Permit for both the C-746-S&T Landfills and for the C-746-U Landfill. L154 is included in the totals for both landfills. Total number of locations sampled equals five.
[b] Sampling frequency reflects most frequent analyses required by the permit and does not reflect field measurement analyses.
[c] K004 is sampled twice per month.
[d] K019 is sampled when the C-746-U Landfill sedimentation pond is discharged through the outfall.
[e] K001, K010, and K011 are monitored for chronic toxicity. K017 is monitored for acute toxicity.
[f] Chronic toxicity is not required when the effluent from the C-617 Lagoon is discharged through Outfall 011.
[g] Chronic toxicity is required only when the effluent from the C-617 Lagoon is discharged through the outfall.
NOTE: Sampling locations and frequencies are detailed in Appendix C.

The primary statute governing the monitoring of effluents to surface water is the Clean Water Act (with the exception of radionuclides), which requires the issuance of a National Pollutant Discharge Elimination

System (NPDES) permit.[3] EPA has delegated administration of the NPDES Program to the Kentucky Division of Water (KDOW) KPDES Program. The KPDES permit requires radiological monitoring at some of the permitted outfalls for reporting purposes only.

Sampling and analytical methods meet the requirements described in 40 *CFR* Part 136 or the KPDES permit. In addition, DOE O 458.1, *Radiation Protection of the Public and the Environment*, and the Radiological Guide provide general and detailed guidance regarding the establishment of effluent monitoring programs for radiological parameters.

Rationale and Design Objectives. To ensure the protection of public health and the environment, the technical/regulatory objectives identified as part of DQOs for the Effluent Monitoring Program include the following:

- Verifying compliance with applicable federal, Commonwealth of Kentucky, and local effluent regulations and DOE Orders;
- Determining compliance with commitments made in environmental impact statements, environmental assessments, or other official documents;
- Evaluating the effectiveness of treatment processes and pollution control;
- Identifying potential environmental problems and evaluating the need for remedial actions or mitigating measures;
- Supporting permit revision and/or reissuance;
- Detecting, characterizing, and reporting unplanned releases; and
- Measuring changes in monitored concentrations of constituents in effluent over time.

In addition, Section 2.0 of the Radiological Guide recommends that this plan document the following:

- Effluent monitoring (sampling or *in situ* measurement) extraction locations used for providing quantitative effluent release data for each outfall;
- Procedures and equipment used to perform the extraction and measurement;
- Frequency and analyses required for each extraction (continuous monitoring and/or sampling) location;
- Method detection level (MDL)/minimum detectable activity (MDA) and accuracy by analyte;
- QA components; and
- Effluent outfall alarms (not required at the Paducah Site).

The preceding requirements are addressed as follows.

- Appendix C of this document lists all effluent monitoring locations. Appendix C specifies sampling and field measurements, as well as analytical method information. Appendix C also lists the sampling

[3] Radioactive materials that are regulated under the Atomic Energy Act of 1954 are excluded from the Clean Water Act.

frequency at each location and the required analytical parameters and analytical methods. Additionally, Appendix C specifies the sampling driver for each sampling program (e.g., permit, CERCLA decision document). Generally, data collected as part of this document not only meets permit and CERCLA decision requirements, it also provides data sets that may be used in future CERCLA decision documents.

- Appendix D of this document provides the QAPP. All QA components are outlined within this plan. The QAPP identifies reporting limits [or practical quantification limits (PQLs)] and MDLs/MDAs. In cases where reporting limits (or PQLs) are specified under a given regulatory driver, those requirements are denoted as such within the QAPP.

- Each laboratory receives a statement of work for all sampling activities. The reporting limits (or PQLs) found in the QAPP are specified in the statement of work as a condition of work. If a laboratory cannot meet these limits, and if the limits are not a matter of regulatory compliance, the contractor project manager may approve the increased reporting limits (or PQL) and/or MDLs/MDAs.

- Monitoring results from the KPDES outfalls are summarized in the discharge monitoring reports, which are submitted on a monthly basis to the KDOW as required by the KPDES permit. Notifications of exceedances to the permit are submitted per the specifications within the permit. Surface water monitoring results at the landfills are summarized in quarterly reports and submitted to KDWM on a quarterly basis.

Evaluation of Effluents. Effluents, regardless of whether they contain radiological contaminants from new or modified facilities, are to be evaluated against permit conditions (as applicable) by the Environmental Compliance support personnel. Additionally, data are reviewed by the ERPP organization for evaluation and trending purposes and to determine any required response.

Physical/Chemical/KPDES. KPDES is the regulatory program administered by KDOW for discharge of wastewaters to the waters of the Commonwealth of Kentucky. The DOE Paducah Site KPDES permit, KY0004049, establishes monitoring requirements for the discharge of effluent and surface water runoff.

The permit defines limits on the concentration and amounts of specific chemicals that can be discharged and on the physical impact of those discharges (e.g., temperature or biological harm) to surface waters.

Processes for DOE operations have been evaluated to determine the chemicals, radiological components, and physical parameters (e.g., temperature) likely to affect the KPDES-permitted effluents. Effluents from permitted landfills are evaluated during the reporting and permit renewal processes.

Radiological. Based on the evaluation of emissions and the results of radiological monitoring from historical data sets, neither continuous monitoring nor continuous sampling with frequent analyses is required by DOE O 458.1. The KPDES permit requires radiological analyses at some of the outfall locations (Figure C.12).

Effluent sampling is required by the ERPP. Radiological data sets of effluent water near the KPDES outfalls (Figure C.13), along with surveillance data of surface water and sediments slightly downstream (Figures C.15 and C.16), are evaluated as part of the ERPP.

Program Implementation Procedures. The FRNP EM manager (or designee) is responsible for implementing all relevant aspects of the EMP. In that role, the FRNP EM manager reports through a line organization to the Environmental Services Director and provides centralized coordination responsibilities.

2.1 LIQUID

2.1.1 Surface Water

Surface water leaving KPDES outfalls/the CERCLA outfall includes rainfall runoff from cylinder yards and landfills and effluent from site processes. The intent of monitoring is to assess compliance with Commonwealth of Kentucky and federal regulations, permits, and DOE Orders and to assess the impact of DOE operations on the local environment.

C-746-S&T and C-746-U Landfills Surface Water. Rainfall runoff from three locations at C-746-U Landfill and three locations at C-746-S&T Landfills (Figure C.11) are sampled quarterly for parameters listed in Appendix C. Although three locations are cited for each, there are only five unique locations.

KPDES Monitoring. Fifteen effluent sampling points covered by the KPDES permit are illustrated in Appendix C (Figure C.12).

2.1.2 Leachate

C-746-S and C-746-U Landfills Leachate. Untreated leachate from the solid waste landfills is sampled annually and is analyzed for the parameters listed in Appendix C in accordance with permit requirements.

C-404 Landfill Leachate. Leachate samples are collected from the C-404 Landfill Leachate Collection System and analyzed for the parameters listed in Appendix C in accordance with permit requirements.

2.2 AIRBORNE

Airborne emissions are regulated by the Kentucky Division for Air Quality. For emissions that may be harmful to the public or the environment, permits are required from the Division for Air Quality. Operations at the Paducah Site require air permits. Ambient air monitoring, which monitors fugitive emissions from all Paducah Site operations, is conducted by nine continuous air monitors, as described in the approved Paducah Site NESHAP Management Plan, CP2-EC-0002/FR2 (FRNP 2019). This includes a background location.

Operational sampling included in the Title V air permit (V-21-011) is considered outside the scope of the EMP. FRNP will implement the appropriate operational sampling included in the Title V air permit (V-21-011). This data will be available in the event it is needed to evaluate site conditions; however, this sampling is considered outside the scope of the EMP. Additionally, the DUF_6 facility maintains a Conditional Major, Operating permit (F-21-018), which also is considered outside the scope of the EMP.

3. METEOROLOGICAL MONITORING

DOE operations may have airborne radionuclide and chemical emissions from various sources, such as CERCLA remedial actions, as well as fugitive emissions and stack emissions from deactivation of the gaseous diffusion buildings. The Paducah Site requires meteorological monitoring data to support both chemical and radiological evaluations. The Radiological Guide recommends that a meteorological monitoring program appropriate to site activities be established. The Paducah Site no longer operates the on-site meteorological tower to collect meteorological data. Meteorological data sets purchased from other sources and historical data collected at the site may be used to model the radiological and chemical emissions. Purchased meteorological data is procured from accredited meteorological measuring stations that are in close proximity to the site.

3.1 CHEMICAL EMISSIONS

DOE operations may have airborne chemical emissions from various sources, such as CERCLA remedial actions, as well as fugitive emissions.

3.2 RADIOLOGICAL EMISSIONS

Operations at the Paducah Site may have airborne radiological emissions from various sources, such as CERCLA remedial actions, deactivation activities, DUF_6 conversion activities, as well as fugitive emissions. Modeling to demonstrate compliance with NESHAP regulations is conducted using the Clean Air Act Assessment Package-88 (CAP-88). In accordance with the NESHAP Management Plan (FRNP 2019), meteorological data utilized for CAP-88 are compiled from the National Weather Service at Paducah and the National Climatic Data Center's "Climate at a Glance" database. Other dose modeling software such as RESRAD-OFFSITE or RESRAD-BIOTA may be used with appropriate meteorological data sets.

THIS PAGE INTENTIONALLY LEFT BLANK

4. ENVIRONMENTAL SURVEILLANCE

Supporting the goal of DOE O 436.1, *Departmental Sustainability*, for planning environmental activities, the Paducah Site performs environmental surveillance. Environmental surveillance is the collection and analysis of samples or direct measurements of air, water, sediment, and other media from DOE sites and their environs for the purpose of determining compliance with applicable standards and permit requirements, assessing radiation exposures of members of the public, and assessing the effects, if any, on the local environment; therefore, the environmental surveillance program is a comprehensive environmental program addressing radiological and nonradiological parameters.

In support of DOE O 458.1, *Radiation Protection of the Public and the Environment*, the Paducah Site performs monitoring of remedial actions and activities to monitor that members of the public are not exposed to ionizing radiation at a total effective dose (TED) exceeding 100 mrem (1 mSv) in a year from all site-related sources of ionizing radiation and exposure pathways. Air emissions are covered under 40 *CFR* Part 61, NESHAP. Under 40 *CFR* § 61.92, emissions of radionuclides to the ambient air from DOE facilities shall not exceed those amounts that would cause any member of the public to receive in any year an effective dose equivalent (EDE) of 10 mrem per year.

DOE activities must be conducted to ensure that radionuclides contained in liquid effluents do not cause private or community drinking water systems to exceed an annual dose of 4 mrem per year for radionuclides emitting beta particle and photon radioactivity per 40 *CFR* § 141.66 (d)(1), which is more limiting than DOE O 458.1 limit of 10 mrem per year. For monitoring of community drinking water systems, 40 *CFR* Part 141 allows for environmental surveillance data to be used in the vicinity of nuclear facilities. The nearest downstream community water withdrawal location is Cairo, Illinois, located on the Ohio River. For comparison purposes, a background sample of the Ohio River water is collected upstream of the site. The plant effluent sampling results are evaluated against both the Cairo, Illinois, sampling results and the background location sampling results. This evaluation is to demonstrate that plant effluent concentrations are below a 4 mrem per year standard at the community drinking water system. Plant environmental surveillance sampling locations are within the Bayou and Little Bayou Creek systems prior to confluence with the Ohio River.

DOE O 458.1 defines “public dose” as the dose received by member(s) of the public from exposure to radiation and to radioactive material released by a DOE radiological activity whether the exposure is within a DOE site boundary or off-site. It does not include doses received from radon and its decay products in air (regulated separately under DOE O 458.1), occupational exposures, doses received from naturally occurring “reference” radiation, or doses received by a patient from medical procedures. The determination of the public dose, as established by EPA regulation 40 *CFR* Part 61, differs in that the 10 mrem EDE per year limit applies to dose received where the members of the public reside.

The Radiological Guide recommends that DOE facilities perform routine surveillance if an annual dose of site origin at the site boundary exceeds either 5 mrem per year effective dose (ED) to an individual or 100 person-rem collective ED within a radius of 80 km (about 50 miles) of a central point on the site. Historically, as reported in previous ASERs, the annual dose due to DOE operations at the Paducah Site has been less than 5 mrem per year ED (individual) or 100 person-rem collective ED.

An overview of routine environmental surveillance is provided in Table 2, which lists for each program the number of sampling locations, sampling frequency, sample type, and parameters for the analysis performed.

Table 2. Routine Environmental Surveillance

Program	Number of Locations	Sampling Frequency	Sample Type	Parameters
Groundwater				
Surveillance	38	Annually	Grab	See Appendix C
Surveillance	74	Biennially (Sampled FY 2021—will be sampled in FY 2023)	Grab	See Appendix C
Surveillance	17	Semiannually	Grab	See Appendix C
Surveillance	3	Quarterly	Grab	See Appendix C
Surveillance Geochemical	37	Every 3 years (Sampled FY 2022—will be sampled in FY 2025)	Grab	See Appendix C

Table 2. Routine Environmental Surveillance (Continued)

Program	Number of Locations	Sampling Frequency	Sample Type	Parameters
Environmental Dosimeters	64/7	Quarterly	Continuous	External Gamma/Neutron

[a] Four of the same wells are cited in the Solid Waste Landfill Permit for C-746-S&T and C-746-U Landfills. For these totals, the wells are counted for both programs. Also, for the C-746-S&T Landfills locations, the count of 25 wells includes 2 wells that are measured only for water level. Twenty-three locations are sampled for analytical laboratory parameters.
[b] Sampling frequency reflects most frequent analyses required by the permit and does not reflect field measurement analyses.
[c] K004 is sampled twice per month.
[d] K001, K010, and K011 are monitored for chronic toxicity. K017 is monitored for acute toxicity.
[e] Chronic toxicity is not required when the effluent from the C-617 Lagoon is discharged through Outfall 011.
[f] Chronic toxicity is required only when the effluent from the C-617 Lagoon is discharged through the outfall.
[g] Information is taken from the National Weather Service and historic data sets.

4.1 GROUNDWATER

4.1.1 Introduction

The Paducah Site, located in the Jackson Purchase region of western Kentucky, lies within the northern tip of the Mississippi Embayment portion of the Gulf Coastal Plain Province. The stratigraphic sequence in the region consists of Cretaceous, Tertiary, and Quaternary sediment unconformably overlying Paleozoic bedrock. The *Report of the Paducah Gaseous Diffusion Plant Groundwater Investigation Phase III* (Clausen et al. 1992) discusses geology and hydrogeology of the Paducah Site in detail. Additional information regarding the geology and hydrogeology at the Paducah Site is covered in the *2016 Update of the Paducah Gaseous Diffusion Plant Sitewide Groundwater Flow Model* (DOE 2017) for the Paducah Site. The most recent groundwater contaminant plume maps were developed in 2021 and are contained in *Trichloroethene and Technetium-99 Groundwater Contamination in the Regional Gravel Aquifer for Calendar Year 2020 at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky* (FRNP 2021a).

An investigation is being performed under the Groundwater Strategy project to evaluate the extent of TCE and groundwater flow trends at the site. Manual water level measurements and pressure transducer measurements will be used to measure the potentiometric surface and seasonal changes in the potentiometric surface. MWs covered under this project are included in Table B.5 of Appendix B.

The synoptic water level events will continue to be performed quarterly to support the Groundwater Strategy project and groundwater modeling. Also in support of the Groundwater Strategy project and groundwater modeling, during the quarterly synoptic water level events, water level elevation at Metropolis Lake will be measured. A survey control point has been established near the lake.

4.1.2 Rationale and Design Criteria

The groundwater monitoring program consists of routine compliance monitoring designed to ensure the protection of public health and the environment. The technical criteria identified as part of DQOs for the groundwater monitoring program include the following:

- Obtain data to determine baseline conditions of groundwater quality and quantity;
- Demonstrate compliance with and implementation of all applicable regulations and DOE Orders;
- Provide data to allow early detection of groundwater pollution or contamination;

- Identify existing and potential groundwater contamination sources and maintain surveillance of these sources; and

- Provide data for making decisions about waste disposal on land-based units and the management and protection of groundwater resources.

The following addresses specific laws, regulations, and orders.

DOE Orders. Neither DOE Orders nor the Radiological Guide requires specific groundwater sampling frequencies or parameters. Instead, DOE Orders require that sample collection programs reflect specific facility needs. Type and frequency of sampling shall be adequate to characterize effluent streams and to identify existing and potential groundwater contamination sources. Monitoring verifies that releases are stable without causing environmental harm. This EMP was written to include effluent monitoring and environmental surveillance at the Paducah Site. In order to provide a data set that is assessed for potential environmental impacts, a comparison data set from samples collected from areas that are not impacted by site operations also is required. Such sample locations are called "background" locations.

Commonwealth of Kentucky Regulation. Preparation of a Groundwater Protection Plan that addresses requirements to ensure protection for all current and future uses of groundwater and to prevent groundwater pollution is required by 401 *KAR* 5:037. This requirement was addressed by DOE, by writing and implementing the Groundwater Protection Plan, according to 401 *KAR* 5:037, prior to the deadline of August 24, 1995. The current Groundwater Protection Plan is *Groundwater Protection Plan for the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, CP2-ES-1000 (FRNP 2021b). This document is reviewed and revised, as needed, to reflect current site operations.

Agreement in Principle Sampling. The Agreement in Principle (AIP) provides sampling and inspection of the differing monitoring programs. The oversight includes inspections (including MW inspections and surface water area inspections), sample analysis, and data quality. KDWM AIP personnel conduct independent groundwater and surface water sampling and obtain DOE sample splits.

AIP personnel also respond to questions and concerns from the public, including sampling of residential wells. The AIP personnel participate in public meetings to provide an independent view of the effect of the Paducah Site on the local environment and health of the public.

CERCLA Actions. A requirement of the FFA is to determine the nature and extent of off-site contamination (attributed to historical releases from Paducah facilities). This requirement is addressed through the RI process and ongoing remedial actions for OUs at the Paducah Site, as well as for the sampling under this EMP. Ongoing remedial actions at the Paducah Site include the following.

The *Action Memorandum for the Water Policy at the Paducah Gaseous Diffusion Plant* (Water Policy) (DOE 1994) stipulated the need to ensure that residential landowners whose well water was contaminated by PGDP sources were provided with water (DOE 1993a; DOE 1993b). The Water Policy was established in accordance with the Administrative Consent Order, following an Engineering Evaluation/Cost Analysis, and was written to document the preferred alternative addressing the need for protection of human health due to the presence of groundwater contamination originating from the Paducah Site. As soon as possible after contamination was found in local residential water supply wells, the affected households were supplied with bottled water. Construction of water mains allowed access to water lines for homes in the affected area. This was accomplished as a non-time-critical removal action under CERCLA. The Action Memorandum provided the sampling strategy only at the time the document was prepared and referred future sampling to the Sampling and Analysis Plan Addendum, which was superseded by the EMP. Currently, 27 wells are sampled in support of the action (Figures C.8 and C.9). DOE also is sampling 2

additional residential wells along Ogden Landing Road northwest of the Paducah Site in support of the Groundwater Strategy project and Water Policy Box evaluation (Figure C.8).

Record of Decision for Interim Remedial Action for the Groundwater Operable Unit for the Volatile Organic Compound Contamination at the C-400 Cleaning Building at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky (DOE 2005) requires MW sampling. This sampling provides a meaningful tool for evaluating the downgradient dissolved-phase contamination in the Northwest Plume and the efficacy of the C-400 Interim Remedial Action (Figure C.6).

Per the *Memorandum of Agreement for Resolution of Informal Dispute Concerning U.S. Environmental Protection Agency and Kentucky Department for Environmental Protection Requirements for Additional Actions or Modifications Regarding the CY 2018 Five-Year Review for Remedial Actions at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky, DOE/LX/07-2426&D2* (DOE 2020), the Operation and Maintenance Plans for the Northeast and Northwest Plumes were revised to incorporate elements of Water Policy boundary monitoring conducted under the EMP.

Operation and Maintenance Plan for the Northwest Plume Groundwater System Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky[4] requires well sampling in order to monitor the nature and extent of groundwater contamination and to evaluate any cyclic trends in water quality that may affect contaminant migration (DOE 2021b). There are 28 wells to be sampled semiannually for the Northwest Plume (Figure C.5). In addition, five wells will be sampled quarterly in order to evaluate trends in TCE and Tc-99 concentrations along the Northwest Plume.

Operation and Maintenance Plan for the Northeast Plume Containment System Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky[2] (DOE 2021c), and the *Remedial Action Work Plan for the Optimization of the Northeast Plume Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, (DOE 2018) require quarterly sampling of 36 wells for the Northeast Plume (Figure C.4). The Northeast Plume operation and maintenance (O&M) plan requires semiannual sampling of MW255 and MW256; however, these wells are sampled quarterly to provide timely assessment of Northeast Plume optimized extraction well operations. The Northeast Plume O&M plan requires sampling of a CERCLA outfall in order to monitor effluent from the Northeast Plume Containment System. The sampling requirements for the CERCLA outfall are included in this EMP.

Remedial Action Work Plan for In Situ Source Treatment by Deep Soil Mixing of the Southwest Groundwater Plume Volatile Organic Source at the C-747-C Oil Landfarm (Solid Waste Management Unit 1) at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky, (DOE 2014) requires sampling of MWs in order to monitor the progress of contaminant reduction in the Regional Gravel Aquifer (RGA) groundwater following soil mixing. Seven wells will be sampled semiannually in FY 2023 (Figure C.7).

4.1.2.1 Landfill groundwater monitoring program

C-746-S and C-746-T Landfills. C-746-S and C-746-T Solid Waste Landfills are closed landfills owned by DOE. These landfills currently are in postclosure status under the landfill permit. The groundwater is monitored utilizing a total of 25 MWs near the two landfills (Figure C.1). Of these 25, 23 are used for collection of samples to analyze organic, inorganic, and radiological parameters. The remaining two are used for water level measurements. Additional analytical information is found in Appendix C.

C-746-U Landfill. The C-746-U Solid Waste Landfill is an operating landfill owned and managed by DOE. This landfill currently is being operated as a contained landfill under the landfill permit; 21 MWs

[4] O&M plans also specify production sampling. Sampling and monitoring of treatment systems are not captured within this EMP.

(Figure C.1) are monitored quarterly for organic, inorganic, and radiological parameters. Additional analytical information is found in Appendix C. Sampling and monitoring of the treatment system is not captured within this document because it is part of the daily operations of the landfill.

The sample collection order is as follows: volatiles (including total organic halides), dissolved gases and total organic carbon, semivolatile organics, metals and cyanide, water quality cations and anions, and radionuclides. If samples are being collected at a location where it is anticipated that sample volume is not adequate, then the order of collection will be volatiles followed by radionuclides.

C-404 Landfill. The C-404 Hazardous Waste Landfill is currently subject to post-closure monitoring under the Hazardous Waste Management Facility Permit KY8-890-008-982. The C-404 Hazardous Waste Landfill currently is being monitored under detection monitoring (semiannual sampling) according to permit requirements, including Attachment E of the permit, "Groundwater Monitoring." The groundwater is monitored utilizing nine MWs (Figure C.2). There are six downgradient and three upgradient compliance point wells. Per the permit, sample aliquots shall be withdrawn in the following order: volatiles, total metals, and radionuclides. Remaining permit requirements may follow the radionuclide sample collection. Samples are to be collected twice a year: January through March as one sampling event and July through September as the second event. Results from the January through March event are reported to KDWM by May 30 and results from the July through September event are reported to KDWM by November 30.

An alternate source demonstration (ASD) was conducted in 2021 in response to a statistical exceedance for Tc-99 in MW84A. This ASD has determined that the Tc-99 contamination is indicative of dissolved contamination in the RGA and is not derived from contamination associated with construction of RGA well MW84A (FRNP 2021c). In accordance with the permit, compliance monitoring for radiological constituents was conducted quarterly at the C-404 Landfill during FY 2022. Compliance monitoring for radiological constituents will continue to be conducted quarterly during FY 2023 until the required groundwater fate and transport report is submitted and a decision is made to change the sampling frequency.

Prior to sample collection, KDWM shall be notified one week in advance. Notification may be made in writing or electronic format. Electronic mail shall be submitted to pertinent KDWM field personnel.

All groundwater wells (MWs, piezometers, etc.) will be inspected annually during the third quarter of the calendar year (CY). The wells will be inspected for the condition of the Kentucky Groundwater Data Repository identification, the outer casing, the concrete pad, the bumper posts, painting, the well cap, the lettering and numbers, lock and hasp, well access, vegetation control, and well fittings and tubing. Items will be repaired, as necessary. The wells will be inspected annually for excessive sedimentation by performing a depth sounding at each MW. If a well is found that no longer meets the requirements of 401 *KAR* 34:060, the well will be abandoned in accordance with 401 *KAR* 6:350 and the Hazardous Waste Management Facility Permit. If a replacement well is needed, it will be installed in accordance with 401 *KAR* 6:350 and the requirements of the Hazardous Waste Management Facility Permit.

C-746-K Landfill. Sampling of three MWs (Figure C.3) is conducted to evaluate the potential impact of historical waste disposal activities at the C-746-K Landfill on the groundwater quality parameters, which are analyzed semiannually, as identified in Appendix C. The Record of Decision (ROD) for Waste Area Groups 1 and 7 (DOE 1998) discussed sampling that was being conducted at the time of the ROD development; however, the ROD allowed for modifications to the sampling strategy with documentation of the strategy in a Sampling and Analysis Plan addendum, which was replaced by the EMP. Sampling of these wells is not required by a permit, but is conducted in support of the FFA CERCLA investigation and RCRA facility investigations according to the FFA. Additional analytical information is found in Appendix C.

4.1.2.2 Surveillance monitoring program

Environmental Surveillance Program. In order to monitor the nature and extent of groundwater contamination and to monitor groundwater quality, 73 nonbackground MWs and 1 background well are sampled biennially, 37 nonbackground MWs and 1 background well are monitored annually, 17 MWs are sampled semiannually, and 3 MWs are sampled quarterly, as shown in Figure C.10. Sampling of these MWs is not driven by a permitted process, but is conducted in support of the FFA CERCLA investigations, as well as DOE O 436.1. The inclusion of these MWs in this program does not exclude them from other sampling programs. For ease of review, Appendix B of this document contains a well inventory list, which acts as a crosswalk for each MW and sampling program.

Per the *Memorandum of Agreement for Resolution of Informal Dispute Concerning U.S. Environmental Protection Agency and Kentucky Department for Environmental Protection Requirements for Additional Actions or Modifications Regarding the CY 2018 Five-Year Review for Remedial Actions at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky, DOE/LX/07-2426&D2*, (DOE 2020), the *Operation and Maintenance Plan for the Northeast Plume Containment System Interim Remedial Action at the Paducah Gaseous Diffusion Plant*, *Paducah, Kentucky*, (DOE 2021c) was revised to incorporate elements of Water Policy boundary monitoring conducted under the EMP. MW100, MW150, MW409, MW410, MW411, MW473, MW474, MW475, and MW476 are sampled in support of the Environmental Surveillance program, and these wells also are sampled in support of Water Policy boundary monitoring.

The sampling frequency for this program was modified in the FY 2011 EMP from a quarter/semiannual basis to an annual/biennial basis. This modification was justified by an evaluation of the data collected over 10 years, which showed that there had not been significant changes that merited the need for sampling as frequently. The MWs that were selected to be monitored annually were selected based on their location within the plumes. Eighty-three biennial MWs were sampled in FY 2021; therefore, the biennial MWs will be sampled in FY 2023.

One background well is sampled biennially and one annually to monitor the background water chemistry of wells located upgradient of the plant to compare with MWs potentially impacted from plant activities.

MW152 was abandoned in October 2018 to enable Tennessee Valley Authority to construct a new process water basin. Another location has been selected for installation of a new well once construction activities have been completed. This new well will be MW583, and it will be included in the annual group of MWs once it has been installed.

Environmental Surveillance (Geochemical Monitoring) Program. In order to monitor the effects of natural attenuation of groundwater contamination and to monitor groundwater quality, 37 MWs are to be sampled every 3 years (Table C.22). Sampling of these wells is not driven by a permitted process, but is conducted in support of the FFA CERCLA investigations, as well as DOE O 436.1. The sampling frequency for this program was modified in the FY 2011 EMP. The sampling frequency was modified from an annual basis to a triennial basis. These MWs were sampled in FY 2022 as part of the triennial basis sampling strategy; therefore, these wells will not be sampled in FY 2023.

MW152 was abandoned in October 2018 to enable Tennessee Valley Authority to construct a new process water basin. Another location has been selected for installation of a new well once construction activities have been completed. This new well will be MW583, and it will be included in this program once it has been installed.

4.1.3 Extent and Frequency of Monitoring

Appendix B provides information for all wells used at the Paducah Site, as well as residential wells located off-site. The groundwater sampling frequency and parameters, which are identified in Appendix C, are reviewed annually. The information detailed in Appendix C is the planning document for all monitoring and lists sites to be monitored, the governing program(s), MWs, parameters, analytical methods, and the sampling frequency.

4.1.4 Program Implementation Procedures

Organization. The FRNP EM manager (or designee) is responsible for implementing all relevant aspects of the EMP.

Plans. The *Groundwater Protection Plan for the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, CP2-ES-1000 (FRNP 2021b), addresses the following specific requirements listed in Section 3(3) of 401 *KAR* 5:037:

(a) General information regarding the facility and its operation;

(b) Identification of activities associated with the facility, as identified in Section 2 of the regulation;

(c) Identification of all practices chosen for the plan to protect groundwater from pollution;

(d) Implementation schedules for the protection practices;

(e) Description of and implementation schedule for employee training necessary to ensure implementation of the plan;

(f) Schedule of required inspections, as applicable; and

(g) Certification of the plan by the appropriate Paducah Site representative.

These plans and the EMP provide the framework of the Groundwater Monitoring Program.

4.2 SURFACE WATER/SEDIMENT ENVIRONMENT

Surface Water. Measurement of water quality parameters in surface water samples provides a general guide to the environmental health of the system. Certain contaminants (e.g., volatile organic compounds) that are not particularly concentrated in other media are more efficiently analyzed in water samples.

Sediment. A single sediment sample can represent information that would require a large number of water samples, spaced over a period of time, to reconstruct. Sediment acts to collect, concentrate, and store specific kinds of contaminants at specific locations. Concentrations of contaminants in sediments represent integrated measures of aqueous contaminant concentrations over some preceding period of time.

The Environmental Surveillance Program at the Paducah Site for surface water and sediment evolved over a number of years in response to regulatory and community concerns. Initially, the prudent action was to sample surface water at the permitted outfalls and upstream and downstream within the receiving streams to assess potential impacts. Since that time, DOE has conducted remediation/removal efforts at the site, which has decreased the potential for surface water and sediment contamination. Additionally, the effluent and surface water runoff from outfalls leaving the plant site is monitored to confirm no current impacts

from ongoing operations. Monitoring at the outfalls is permitted by KDOW through the KPDES permit and radiological parameters are monitored under DOE O 458.1 requirements. Limited radiological samples for surface water and sediment are collected in the environment to verify the effectiveness of the outfall sampling and to evaluate the accumulation of radionuclides in the environment.

4.2.1 Rationale and Design Criteria

The surface water and sediment sampling sites included in this EMP are located on selected receiving streams downstream from primary contaminant sources and reference streams. The reference streams are located either off-site or on-site, but upstream of contaminant sources. Sample sites were selected to prioritize areas where the public had access and to capture any and all emissions from the plant site. Contaminant sources include both point sources (e.g., effluent outfalls) and nonpoint sources, such as waste disposal areas or burial grounds.

4.2.2 Extent and Frequency of Monitoring

4.2.2.1 Surface water program

Previously, the KPDES permit required sampling for PCBs and TCE at 19 locations upstream and downstream from Paducah Site operations. The current KPDES permit does not require this sampling; therefore, these locations were removed from this program in FY 2018, with the exception of the C-746-K Landfill locations. The C-746-K Landfill locations will be sampled per the ROD for Waste Area Groups 1 and 7 (DOE 1998). In addition, one seep location in Little Bayou Creek is sampled quarterly for TCE (Figure C.15).

For radiological parameters, surface water is sampled quarterly at seven locations and annually at two locations (Figure C.15). Two locations, L1 (background) and L30 (a location just downstream of the Paducah Site), are sampled annually. L29A (background) and a location near the nearest public water withdrawal location, Cairo, Illinois, (L306) are sampled quarterly. This sampling is performed to evaluate all potential radiological effluents leaving the site and to evaluate the effectiveness of the outfall sampling program. This supports the implementation of DOE O 458.1 through the ERPP (FRNP 2021d). Additional analytical information is found in Appendix C.

4.2.2.2 Sediment program

Sediment samples are collected semiannually from 14 locations, 2 of which are considered background locations (Figure C.16). Five locations and a background are sampled for radiological parameters to evaluate the effectiveness of the plant effluent monitoring and to monitor the accumulation of contaminants in the environment. Sediment is sampled near the surface water and biological stations at locations downstream from plant operations and in background (reference) streams. Station locations coincide with those for surface water in Bayou Creek and Little Bayou Creek. Of note: Analytical laboratory results will be reported on a dry weight basis, as applicable, unless specified otherwise. Additional analytical information is found in Appendix C. An assessment code of “DRY” has been added in OREIS with the description of “Result reported on a dry weight basis,” for data generated starting in FY 2014, as applicable.

4.2.3 Program Implementation Procedures

The FRNP EM manager (or designee) is responsible for implementing all relevant aspects of the EMP. In that role, the FRNP EM manager reports through a line organization to the Environmental Services Director and provides centralized coordination responsibilities.

4.3 TERRESTRIAL ENVIRONMENT

Woodlands, meadows, and cultivated fields dominate the rural landscape around the DOE Reservation. Immediately adjacent to the DOE Reservation is WKWMA, which is used by a considerable number of hunters, trappers, and anglers each year. Hunting and trapping activities may include such wildlife as rabbit, deer, quail, raccoon, squirrel, dove, turkey, waterfowl, and beaver. Additionally, the Kentucky Department of Fish and Wildlife Resources (KDFWR) sponsors field hunting trials for dogs within the WKWMA.

This section discusses the terrestrial environment near the Paducah Site that could become radiologically contaminated as a result of releases of materials from current or past DOE operations. Farm-raised animal products, as well as local wildlife in the area, may be contaminated through water releases. Wildlife and animal products, including meat, eggs, and milk, may become contaminated through animal ingestion of contaminated water, sediment, other animals, or through direct contact with contaminated areas. The subsequent ingestion of these products can lead to a dose to man and is discussed in subsequent sections. Concentrations of both radionuclide and chemical contaminants are evaluated in the terrestrial environment. The Radiological Guide suggests that if wild game, such as deer or game birds, is available locally, these species should be considered for radiological sampling purposes. Due to downward trends and continued lack of detectable results, this sampling is not performed. Additional details of these evaluations are discussed below.

4.3.1 Rationale and Design Criteria

AIRDOS-EPA computer code contained in the latest version of the CAP-88, which implements a steady-state, Gaussian plume, atmospheric dispersion model, is used to calculate environmental concentrations of the estimated released airborne radionuclides and then uses U.S. Nuclear Regulatory Commission (NRC) Regulatory Guide 1.109 food chain models to calculate human exposures, both internal and external, to receptors. The human exposure values then are used by EPA's version of the DARTAB computer code to calculate radiation doses to the public from radionuclides released during the year.

4.3.1.1 Soils

Very low amounts of airborne radionuclides are emitted at the Paducah Site. A portion of the airborne radionuclides is estimated to be deposited in soil. Irrigation and deposition through waterborne radionuclides is an incomplete pathway because municipal water is used at nearby residences for household purposes (including activities such as watering plants and lawns). See Section 4.3.1 for air modeling information.

4.3.1.2 Animal products

Very low amounts of airborne radionuclides are emitted at the Paducah Site. A portion of the airborne radionuclides is estimated to be deposited in soil and on food crops where they may be absorbed into plants and then may be ingested by animals. Animal products then may be ingested by the public. Irrigation and deposition through waterborne radionuclides is an incomplete pathway because municipal water is used at nearby residences for household purposes (including activities such as watering plants and lawns). The Paducah Site estimates doses from animal products to the receptors based on these estimated airborne emissions. See Section 4.3.1 for air modeling information.

4.3.1.3 Food crops and vegetation

Very low amounts of airborne radionuclides are emitted at the Paducah Site. A portion of the airborne radionuclides is estimated to be deposited in soil and on food crops and vegetation where they may be

absorbed into food crops and vegetation. These food crops then may be ingested by the public. Irrigation and deposition through waterborne radionuclides is an incomplete pathway because municipal water is used at nearby residences for household purposes (including activities such as watering plants and lawns). The Paducah Site estimates doses from food crops to the receptors based on these estimated airborne emissions. See Section 4.3.1 for air modeling information.

4.3.1.4 Wildlife

Wildlife monitoring (i.e., deer) historically was conducted near the Paducah Site. In 2011, an extensive review was conducted of data sets from 20 years of deer harvesting events. As a result of this review, the deer monitoring was eliminated because of a downward trend and a continued lack of detection in the results, as well as an overall downward trend in the concentration of contaminants found at the Paducah Site due to remediation efforts.

4.4 EXTERNAL RADIATION

The Paducah Site conducts routine surveillance of external gamma and neutron radiation exposure to monitor any effects due to past releases of radionuclides and current operations involving radioactive sources (e.g., depleted uranium hexafluoride cylinder management). Historical monitoring has shown that the external gamma and neutron radiation dose from routine DOE operations at the Paducah Site boundary is under 10 mrem per year ED (individual) and 100 person-rem per year ED (collective dose for exposed population). Routine surveillance of external gamma radiation with dosimeters is conducted to provide data to model direct external radiation from sources located on-site consistent with DOE O 458.1. Area gamma and neutron dosimetry monitoring near cylinder yards has been in place in previous years to meet 10 *CFR* Part 835 requirements.

4.4.1 Objectives

A primary objective is to calculate the ED of the maximally exposed individual (MEI) member of the public.

A second objective is to calculate ED to a member of the public in areas freely accessible to members of the public. The Paducah Site licenses a portion of the DOE Reservation to the KDFWR for recreational uses. These areas are open to the public for use but do not have any residences within the Paducah Site boundary. Public traffic is allowed on the main reservation roads outside of the active plant area as a courtesy to the public, and some members of the public visit the DOE Reservation for various reasons, including hunting. It is anticipated that any use would be limited to recreational purposes and durations of time spent in the area by the public would be less than full time.

A third objective is to calculate the ED to a member of the public at the Paducah Site boundary. No residences are on-site and any residential receptor would be beyond the Paducah Site boundary.

A fourth objective is to establish the potential dose that a member of the public may receive while visiting or passing through the Paducah Site. This would be for visitors accessing the Paducah Site in the area closed for public access but outside DOE-controlled areas, as defined by DOE O 458.1.

A fifth objective of external exposure monitoring is to establish the potential radiation dose from direct exposure to DOE operations at the boundary of the DOE perimeter fence.

4.4.2 Rationale and Design Criteria

The External Radiation Monitoring Program is designed to provide exposure data on direct radiation from DOE operations to members of the public. The primary factor in selecting the monitoring locations is the potential for a member of the public to be exposed to direct radiation. The highest potential radiation exposure to the public is at the plant perimeter.

The monitoring program conducts area external radiation dose monitoring using dosimeters. Devices of this type are capable of measuring exposure resulting from gamma and neutron radiation and are used throughout the industry to perform EM.

The primary sources for radiation exposure to areas outside the Paducah Site security fence are the UF_6 cylinder storage yards, which are located within the secured area, but in close proximity to the perimeter fence. Studies conducted within the cylinder storage yards have shown that the cylinders are sources of both gamma and neutron radiation. The neutrons are produced at moderate energy levels by the alpha-fluorine reaction taking place within the residual UF_6 material. Further studies have indicated that the range of the neutrons is such that the neutron dose rate falls off rapidly with distance.

4.4.3 Extent and Frequency of Monitoring

The extent and frequency of monitoring for external gamma radiation are determined based on the principle that the exposure levels decrease with distance from the sources and that the levels are relatively constant over time.

Public access assumptions are that (1) the security fence for the secured area provides a physical boundary beyond which the public has no access; (2) the locations of residences and communities outside the reservation are known; and (3) individual exposure scenarios may vary.

Environmental gamma detection dosimeters are located at 64 locations and neutron dosimeters are located at 7 locations, including inside the Paducah Site security fence, Paducah Site perimeter, outfalls, ditches, and background locations (Figure C.17). Dosimeters also have been placed in areas that historically have received the highest radiation exposure.

Data comparisons are made yearly between the current year and the prior year's radiation monitoring and the results are presented in the Annual Report on External Radiation Monitoring, as well as in the ASER.

4.5 AMBIENT AIR

DOE complies with 40 *CFR* Part 61, Subpart H, to control airborne emissions of radionuclides. This compliance includes evaluation of activities that have potential radionuclide emissions. The EDE from point sources is calculated based on monitoring information for each source.

In addition to point sources, DOE has identified potential fugitive and diffuse sources of radionuclides. In accordance with the Paducah Site NESHAP Management Plan, CP2-EC-0002/FR2, ambient air is monitored to measure concentrations of radionuclides from all sources, including fugitive and diffuse (FRNP 2019). The ambient air monitoring network is comprised of nine air monitoring stations surrounding the site, including one background station (Figure C.18). Additional analytical information is found in Appendix C.

Because the public dose has been below 10 mrem per year consistently, additional sampling beyond the ambient air monitoring is not warranted for the FY 2023 EMP.

4.6 VEGETATION/SOIL

Very low amounts of airborne radionuclides are emitted at the Paducah Site from DOE sources. A portion of the airborne radionuclides is estimated to be deposited in soil and on vegetation. The Paducah Site estimates doses through the food chain to the receptors based on these estimated airborne emissions. See Section 4.3.1 for air modeling information.

4.7 ANIMAL PRODUCTS

Very low amounts of airborne radionuclides are emitted at the Paducah Site from DOE sources. A portion of the airborne radionuclides are estimated to be deposited in soil and on food crops where they may be absorbed into plants and then may be ingested by animals. Animal products then may be ingested by the public. Irrigation and deposition through waterborne radionuclides is an incomplete pathway because municipal water is used at nearby residences for household purposes (including activities such as watering plants and lawns). The Paducah Site estimates doses from animal products to the receptors based on these estimated airborne emissions. See Section 4.3.1 for air modeling information.

4.8 WATERSHED BIOLOGICAL MONITORING

Historically, a Watershed Monitoring Plan (WMP) was required to meet KPDES permit requirements. The WMP detailed the Paducah Site's biological monitoring program.

In 2011, the WMP was modified to eliminate the requirement for biological monitoring in the creeks surrounding the site. The justification for elimination of biological monitoring in creeks was that, over the years, the watersheds had been sampled extensively to the point that further collection of aquatic organisms could result in a deleterious effect on the aquatic community; therefore, biological sampling no longer was required. Elimination of the program also was supported by the fact that measured concentrations associated with radionuclides of concern at the Paducah Site in fish were low and there was an overall downward trend in the concentration of contaminants due to remediation efforts.

THIS PAGE INTENTIONALLY LEFT BLANK

5. DOSE CALCULATIONS

Effluent releases due to operations at the Paducah Site from DOE sources may contain radionuclides. After release, these substances disperse through the environment by transport mechanisms by which they eventually may reach and affect humans. This section describes the methodologies used to model the dispersion of radionuclides and to estimate human exposure resulting from the intake of the dispersed radionuclides. Human exposures to radionuclides are characterized in terms of TED to the public MEI and to the entire population residing within 50 miles of the site. Site-specific pathways may be used that have current or potential future pathways that are not listed in the Risk Methods Document (DOE 2022b). The Risk Methods Document states that during the DQO process for a specific project, risk analyses will be used to identify qualitatively the preliminary chemicals of potential concern, receptors that may be exposed to contaminants, locations at which exposure may occur, and pathways by which contaminants may reach these locations. This information will be used to develop the conceptual site model against which the new data collected can be compared. Exposure factors will be based on information contained in the Risk Methods Document or in consultation with project teams for site-specific parameters. In addition to the dose assessments in support of the ASER, individual projects also may perform dose assessments to establish bounding scenarios to ensure that any future public radiological exposures are maintained within the limits established in DOE Orders. The assumptions and parameters used in these project-specific assessments are found within the individual project technical derivations.

5.1 CONFORMANCE WITH STANDARDS FOR PUBLIC DOSE CALCULATIONS

Models selected to assess environmental transport of and human exposures to substances released from DOE operations are codified or approved for use by DOE. The models are appropriate for the physical and environmental situation encountered and for the data available to characterize the situation. Input data, including default values, are documented and evaluated for applicability to the situation being modeled.

A complete set of potential human exposure pathways is considered in the assessments of radiological exposures. Those pathways that represent the potential exposures to the most exposed individual and to the entire population residing within 50 miles of the site are evaluated as appropriate. The pathways that are evaluated are discussed in Sections 5.3 and 5.4.

Descriptions of the models and computer codes may consist of references to published descriptions or of actual mathematical formulations developed for special calculations. Surface water and groundwater modeling are conducted, as necessary, to conform to applicable requirements of the Commonwealth of Kentucky and of the regional EPA office.

5.2 MAJOR CONSIDERATIONS

Members of the public may receive radiation doses from the Paducah Site from DOE sources from materials released to the air and waters. In addition, some members of the public may receive minor radiation doses through direct external irradiation by radiation emanating from the cylinder yards located within the secured area of the plant. Doses are estimated for all potentially important exposure pathways relevant to the above exposure media. Table 3 lists environmental release and transport mechanisms that apply to emissions from DOE operations. Estimation of the consequences of radionuclide or chemical releases from DOE operations must consider all potential pathways by which these materials may reach the surrounding population. To aid in selecting potentially important pathways, a land use survey was performed. This survey recorded and mapped the locations of all residences, farms for animal products, and vegetable gardens within a 3-mile

radius of the site. All identified locations were plotted on a map divided into 16 equal sectors corresponding to the 16 cardinal compass points. This land use survey and other potential pathways are summarized in the Risk Methods Document (DOE 2022b).

Table 3. Environmental Transport Mechanisms Applicable to Releases from DOE Operations

Releases to water	Remain dissolved or suspended in water Deposit on ground via irrigation* Deposit on vegetation via irrigation* Deposit in sediment Uptake to biota
Releases to air	Remain suspended in air Deposit on ground Deposit on vegetation Uptake to biota

*The protective measures taken in support of the Water Policy preclude the use of potentially contaminated water for irrigation. The inclusion of irrigation as a potentially completed exposure pathway is for informational purposes only, and the doses are not modeled.

This information was compared to modeling results to identify the MEI. Demographic data were obtained from the Bureau of the Census to document characteristics of the people who live near the site. As part of the management of the Water Policy, property surrounding the Paducah Site is evaluated annually to ensure that there have been no changes to property ownership.

As part of a CERCLA site investigation, a survey was taken of users of surface and groundwater in the vicinity of the Paducah Site to determine the number of residents using water wells within a 4-mile radius and to determine the number of surface water intakes on the Ohio River up to 15 miles downstream from the Paducah Site.

No resident or business responding to the survey reported using a private intake on the Ohio River or on Bayou Creek or Little Bayou Creek for any part of their water supply. On the Ohio River, the nearest downstream water-intake point used for drinking water is at Cairo, Illinois. Cairo is within 50 miles of the Paducah Site, and drinking water concentrations to the population at that location are considered in the dose assessment.

Figures 1 and 2 list potential environmental pathways to humans and associated media for the transport mechanisms given in Table 3. Sections 5.3, 5.4, and 5.5 discuss the environmental transport, food chain, and dosimetric models used to evaluate human exposures due to current or past DOE operations. Input data to the models are evaluated using site-specific (collected under the EM and surveillance activities described earlier in this plan), historical data, and generic (default) values.

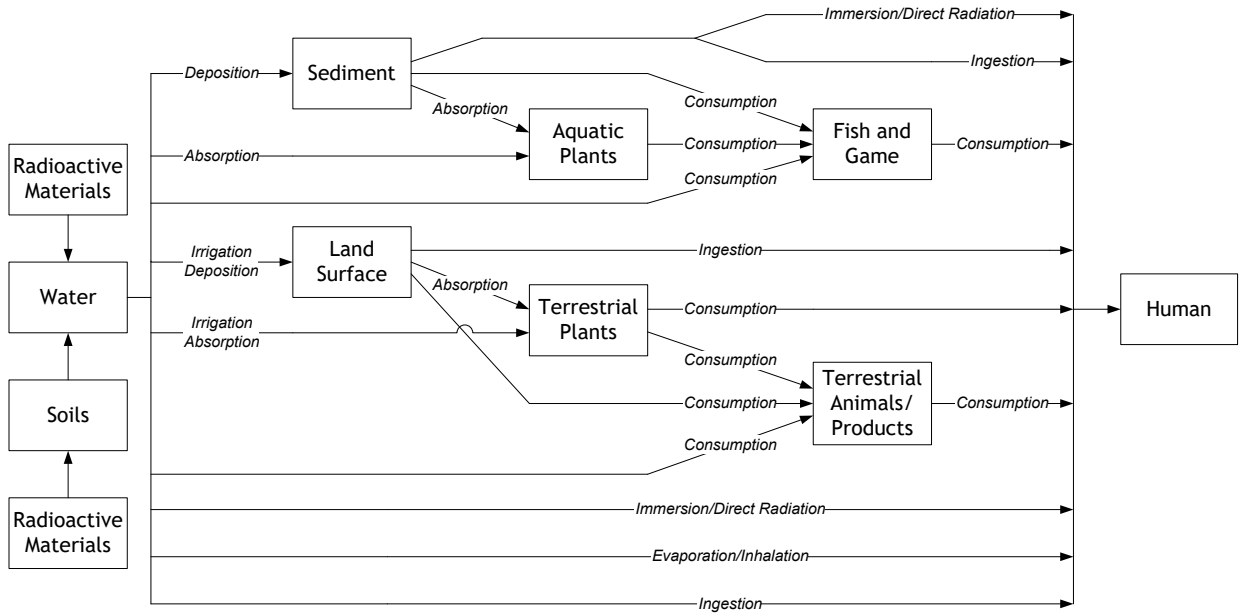

Figure 1. Possible Pathways between Radioactive Materials Released to the Water and Humans

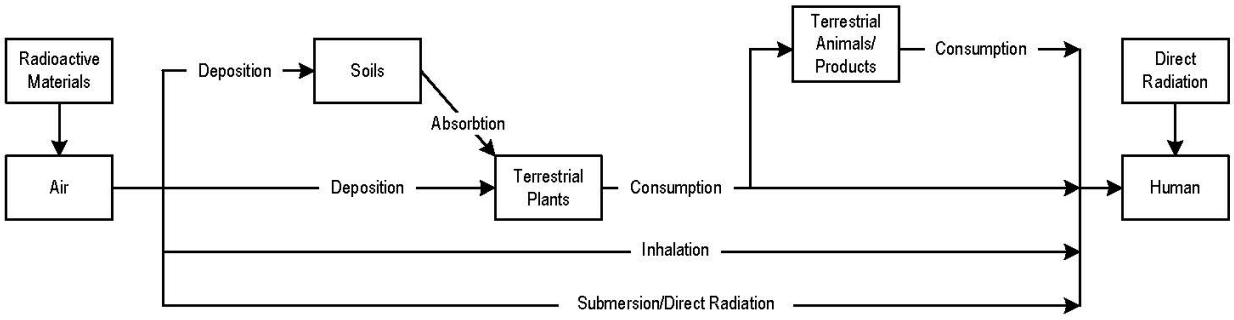

Figure 2. Possible Pathways between Radioactive Materials Released to the Air and Humans

5.3 TRANSPORT MODELS

This section describes the methodologies used to characterize environmental concentrations of radiological materials released from current or past DOE operations. In some cases, transport models are used to predict concentrations; in other cases, measured concentrations are available. When both predicted and measured concentrations are available, the measured concentrations are used to verify modeling predictions.

5.3.1 Atmospheric Transport

Contaminants released to air may be inhaled by individuals, cause direct radiation by submersion, or deposit on vegetation that may be consumed by farm animals or humans.

Dose calculations on atmospheric releases are described in Section 5.4.1.

5.3.2 Water Transport

Contaminants released to water may remain dissolved or suspended in water (groundwater or surface water), deposited in sediment, deposited on ground or vegetation by irrigation,[5] absorbed into plants and animals, or may infiltrate to the groundwater. Quantities of radionuclides released to surface waters are determined by sampling permitted outfalls in each of the local receiving streams. Contamination of private wells with both Tc-99 and TCE due to releases from historical DOE operations led to a response action in 1988. DOE supplied potable water to affected residents and installed an interim water supply for each resident whose water had TCE above the laboratory reporting limit of 1 ppb. For a long-term water supply, a community water line was extended to the residents with contaminated wells. Irrigation of gardens and watering of livestock using contaminated well water has ceased. Presently, groundwater transport is not modeled for public dose calculations; however, a programmatic working group develops information to support transport modeling. This information is used to better understand sources of contamination found in groundwater off-site and to support risk management decisions made for CERCLA projects.

5.4 ENVIRONMENTAL PATHWAY MODELS

This section describes the methodologies that are used to characterize mechanisms for human uptake and exposure to the radiological contaminant concentrations described in Section 5.3. As in Section 5.3, both modeling and sampling are used to obtain contaminant concentrations in media and foods to which humans may be exposed. In addition, environmental gamma radiation exposure is measured through a dosimetry program.

5.4.1 Contaminants in Air

The ambient air surrounding the Paducah Site is monitored to evaluate public exposure to airborne radionuclides. The results of this ambient air monitoring are used by DOE to demonstrate compliance with Commonwealth of Kentucky and federal regulations as well as with DOE Orders. The DOE contribution to airborne radioactivity from DOE operations at the Paducah Site normally is too low to be detected in the presence of natural background radiation in the environment; therefore, as required under 40 *CFR* Part 61, Subpart H, potential doses to the public from point sources also are calculated with a dispersion model. This model calculates how measured quantities of released radionuclides mix with the atmosphere, where they travel, and where they could deposit. Once the dispersion is calculated, population data and concentration/dose conversion factors are used to calculate individual and population doses. These doses include exposure from all the pathways represented in Figure 2, although the primary route of exposure is inhalation. The ambient air monitoring data collected from the ambient air monitoring network are used to assess the impact of emissions of all point and fugitive sources.

The radiation dose calculations are performed using the latest version of CAP-88 computer codes. This package contains EPA's most recent version of the AIRDOS-EPA computer code. The code uses a steady-state, Gaussian plume, atmospheric dispersion model to calculate environmental concentrations of released radionuclides. The code also uses NRC Regulatory Guide 1.109 for food chain models to calculate human exposures, both internal and external, to radionuclides deposited in the environment. DOE uses EPA's latest version of the DARTAB computer code that uses the human exposure values to calculate radiation doses to the public from radionuclides released during the year. The dose calculations use dose conversion factors from the latest version of the RADRISK data file, which EPA provides with CAP-88.

[5] The protective measures taken in support of the Water Policy preclude the use of potentially contaminated water for irrigation. The inclusion of irrigation as a potentially completed exposure pathway is for informational purposes only, and the doses are not modeled.

5.4.2 Contaminants in Water

Potential direct routes of human exposure to contaminants in waters include ingestion (drinking water, incidental ingestion while swimming), immersion (swimming, wading, showering), direct irradiation (boating, skiing, shoreline use), and inhalation (e.g., release of contaminants during household use of water). Indirect pathways involve deposition on soil and crops by deposition in sediment (Section 5.4.3), contaminants in soil (Section 5.4.4), contaminants in or on food crops (Section 5.4.5), and contaminants in terrestrial animals and fish (Section 5.4.6).

DOE O 458.1 requires conducting radiological activities to ensure that radionuclides from DOE activities contained in liquid effluents do not cause private or public drinking water systems to exceed the drinking water maximum contaminant levels in 40 *CFR* Part 141. Per 40 *CFR* Part 141, environmental surveillance data may be used in the vicinity of a nuclear facility to verify compliance with 40 *CFR* Part 141 radiological limits for drinking water. Surveillance data from Bayou and Little Bayou Creeks also may be used to verify compliance with 40 *CFR* Part 141 prior to their entrance into the Ohio River.

If the surveillance data from Bayou and Little Bayou Creeks exceed the limits for drinking water, samples may be taken at the Cairo, Illinois, intake and compared to the Ohio River background upstream of the Paducah Site to demonstrate DOE compliance.

Surface water is not used for drinking or irrigation near the plant. In 1990, a survey of surface water and groundwater users in the vicinity of the Paducah Site was conducted to determine the number of residents using water wells within a 4-mile radius and to determine the number of surface water intakes on the Ohio River within 15 miles downstream of the plant. No residents or businesses that responded to the survey questionnaire reported using a private surface water intake on the Ohio River, Bayou Creek, or Little Bayou Creek for any part of their water supply. Private groundwater wells were the major water supply for residents surrounding the Paducah Site. Most residents reported using water from their residential wells for drinking, irrigation, and domestic uses. As part of the management of the Water Policy, property surrounding the Paducah Site is evaluated annually to ensure there have been no changes to property ownership. Dose to the hypothetical maximally exposed individual is calculated based on incidental ingestion of surface water due to swimming in Bayou and Little Bayou Creeks (outfall locations are not included because water within these locations is not indicative of a body of water that a person could enter). The assumptions based on the Risk Methods Document are that a hypothetical recreator may swim 45 days a year, for 2.6 hours a day, with an incidental ingestion of 0.092 liters per hour, and be in different locations throughout the wildlife management area (DOE 2022b). The annual average of the surface water results from the various sampling locations are utilized to calculate a dose for each sample location and the sample location with the maximum estimated dose is assigned to the maximally exposed individual. Collective dose is not calculated for the incidental ingestion of surface water pathway because it is unlikely that a population of individuals would swim repeatedly in either Bayou or Little Bayou Creeks. This pathway is more likely to involve individuals; therefore, it is more suited for MEI dose calculation.

In September 1988, following the discovery of contamination in residential drinking water wells, water was supplied to all residents whose wells contained detectable levels of TCE and gross beta. In 1992, a Water Policy was developed, which specified that residents in the Water Policy box were to receive supplied water either through bottled water or municipal water. That effort was completed May 31, 1994.

Dose calculations are made for the drinking water pathway if measurable concentrations of radionuclides are found in water samples collected from drinking water systems. Cairo, Illinois, about 36 miles downstream on the Ohio River, has the nearest drinking water intake to the plant. The dose to a resident from drinking water ingestion is evaluated based on environmental surveillance data, which includes a sample taken at Cairo, Illinois. If site environmental surveillance data is insufficient to meet the requirements of

40 *CFR* Part 141 and DOE O 458.1, additional samples may be taken at the water intake of the drinking water system. Members of the public (adult) are assumed to ingest 2.5 liters per day of drinking water per the Risk Methods Document (DOE 2022b). Collective doses for the drinking water pathway are calculated based on the population of Cairo, Illinois.

Measured concentrations are compared with federal and Commonwealth of Kentucky standards and with historical concentrations for each contaminant found.

5.4.3 Contaminants in Sediment

Discharges from DOE operations to surface waters may result in accumulations in sediment of radionuclides. Potential routes of human exposure from sediment are direct irradiation, indirect pathways, and incidental ingestion. An example of an indirect pathway is a fish ingesting contaminated sediment and subsequent human ingestion of the fish.

External irradiation from contaminated sediment in Little Bayou Creek is a pathway of potential importance. Radionuclides deposited on the shores of rivers or creeks may accumulate over a period of time, leading to external irradiation of persons standing on contaminated surfaces. The amount of the nuclides built up on the shoreline depends on the concentration in the water, the depth of deposit, and the length of the period of buildup. The dose to persons depends on the time spent near the contaminants. This exposure time is expected to be minimal because warning signs are posted in this area that indicate the possible presence of contamination. An estimated collective dose for the incidental ingestion of sediment within plant creeks and ditches pathway has been calculated by multiplying the dose to the maximally exposed individual from incidental ingestion of sediment by a total estimated number of visitors hiking within the wildlife management area annually (150 persons) (DOE 2022b). This pathway is more likely to involve individuals; therefore, it is more suited for MEI dose calculation.

Incidental ingestion of contaminated sediment may result from exposure during fishing, hunting, or other recreational activities.

5.4.4 Contaminants in Soil

A portion of the airborne radionuclides is estimated to be deposited in soil and on food crops where they may be absorbed into plants and then may be ingested by animals. Animal products then may be ingested by the public. The Paducah Site estimates doses from animal products to the receptors based on these estimated airborne emissions. AIRDOS-EPA computer code contained in the latest version of CAP-88, which implements a steady-state, Gaussian plume, atmospheric dispersion model, is used to calculate environmental concentrations of the estimated released airborne radionuclides and then uses NRC Regulatory Guide 1.109 food chain models to calculate human exposures, both internal and external, to receptors. The human exposure values then are used by the EPA's version of the DARTAB computer code contained in the latest version of CAP-88 to calculate radiation doses to the public from radionuclides released during the year.

Contaminants also may be deposited in soil due to irrigation of crops from groundwater and/or surface water. As part of a CERCLA site investigation, a survey was taken of users of surface and groundwater in the vicinity of the Paducah Site to determine the number of residents using water wells within a 4-mile radius, as specified in the 1990 land use survey, and to determine the number of surface water intakes on the Ohio River up to 15 miles downstream from the site.

No resident or business responding to the survey reported using a private intake on the Ohio River, Bayou Creek, or Little Bayou Creek for any part of their water supply. Because irrigation of gardens and watering of livestock using contaminated well water has ceased, this form of exposure is not modeled.

5.4.5 Contaminants in or on Food Crops

A portion of the airborne radionuclides is estimated to be deposited in soil and on food crops where they may be absorbed into food crops. These food crops then may be ingested by the public. The Paducah Site estimates doses from food crops to the receptors based on these estimated airborne emissions. AIRDOS-EPA computer code contained in the latest version of CAP-88, which implements a steady-state, Gaussian plume, atmospheric dispersion model, is used to calculate environmental concentrations of the estimated released airborne radionuclides and then uses NRC Regulatory Guide 1.109 food chain models to calculate human exposures, both internal and external, to receptors. The human exposure values then are used by the EPA's version of the DARTAB computer code contained in the latest version of CAP-88 to calculate radiation doses to the public from radionuclides released during the year.

Contaminants also may be deposited on vegetation due to irrigation of crops from groundwater and/or surface water. As part of a CERCLA site investigation, a survey was taken of users of surface and groundwater in the vicinity of the Paducah Site to determine the number of residents using water wells within a 4-mile radius and to determine the number of surface water intakes on the Ohio River up to 15 miles downstream from the site.

No resident or business responding to the survey reported using a private intake on the Ohio River, Bayou Creek, or Little Bayou Creek for any part of their water supply. As part of the management of the Water Policy, property surrounding the Paducah Site is evaluated annually to ensure that there have been no changes to property ownership. Because irrigation of gardens and watering of livestock using contaminated well water has ceased this form of exposure is not modeled.

5.4.6 Contaminants in Terrestrial Animals and Fish

Contaminants may accumulate in animals from eating contaminated feed, drinking contaminated water, and breathing contaminated air. Contaminants may accumulate in fish when they eat contaminated foods and equilibrate with surrounding waters. Indirect pathways for human exposure to contaminants in animals and fish are eating meat and fish. Because both measured concentrations and bioconcentration factors associated with radionuclides of concern at the Paducah Site in animals and fish are low, assessments of these pathways are not performed for the EMP; however, radionuclide impact to animals and fish is evaluated per project based on the expected concentration of radionuclides discharged.

Biota in the aquatic community are not sampled. Biota in the watersheds were sampled previously to the extent that further collection of aquatic organisms would have had deleterious effects on the aquatic community.

A portion of the airborne radionuclides are estimated to be deposited in soil and on food crops where they may be absorbed into plants and then may be ingested by domestic animals. Domestic animal products then may be ingested by the public. The Paducah Site estimates doses from animal products to the receptors based on these estimated airborne emissions. AIRDOS-EPA computer code contained in the latest version of CAP-88, which implements a steady-state, Gaussian plume, atmospheric dispersion model, is used to calculate environmental concentrations of the estimated released airborne radionuclides and then uses NRC Regulatory Guide 1.109 food chain models to calculate human exposures, both internal and external, to receptors. The human exposure values then are used by the EPA's version of the DARTAB computer code contained in the latest version of CAP-88 to calculate radiation doses to the public from radionuclides released during the year.

During the 20-year period of deer harvesting at the site, dose assessments from the ingestion of deer meat were performed using measured concentrations of contaminants. In 2011, an evaluation was conducted of the data sets from the years of deer harvesting events (LATA Kentucky 2011). As a result of this review, the deer harvest was eliminated because of a downward trend and a continued lack of detection in the results, as well as an overall downward trend in the concentration of contaminants found at the Paducah Site due to remediation efforts. The elimination of the deer harvest program was documented in the FY 2012 EMP.

5.4.7 Direct Radiation

The only identified source of potential exposure to the public from radiation emanating from radionuclides contained in structures and other objects is gamma radiation from the uranium cylinder storage yards. It is very improbable that members of the public would be exposed to gamma radiation from these uranium cylinders found in the storage yards due to limited exposure time, distance from the access points of the public to the cylinder yards, and shielding. Collective doses for direct radiation are calculated, based on the total estimated number of visitors hiking within WKWMA annually.

5.5 INTERNAL DOSIMETRY MODELS

The results of all dose calculations are reported in terms of TED, the sum of ED received during the year from external exposures, plus the 50-year committed equivalent dose from intake of radionuclides during the year. Appropriate dose conversion factors based on site-specific factors and uses that are used in the calculations are obtained from DOE O 458.1 reference documents such as these: International Commission on Radiological Protection Publication 60 and 40 *CFR* Part 141, *National Primary Drinking Water Regulations.* Although not used in specific dose calculations, the derived concentration standard values given in DOE-STD-1196-2021 may be used in assessing the magnitude of dose to the public associated with measured concentrations of radionuclides in environmental media.

5.6 RADIATION DOSE TO AQUATIC AND TERRESTRIAL BIOTA

Compliance with DOE-STD-1153-2019, *A Graded Approach for Evaluating Radiation Doses to Aquatic and Terrestrial Biota*, regarding the absorbed dose rate limit to native organisms (e.g., invertebrates, fish, raccoons, and muskrats) is demonstrated using generally accepted methods of dose calculation. Current practice estimates absorbed doses by multiplying measured radionuclide concentrations in surface waters by internationally recognized, organism-specific dose rate factors for external and internal exposures and summing the external and internal contributions.

5.7 REPORTS AND RECORDS

Doses to the maximally exposed member of the public and to the population are published in the ASER. In addition, if a radiological release that exceeds any limit contained in paragraphs 2.f.(2), 2.f.(5), 2.g.(4), 2.g.(5)(a), 2.g.(7), 2.g.(8)(a)4 or 2.i.(1) of DOE O 458.1 Chg 4 (LtdChg), *Radiation Protection of the Public and the Environment*, dated September 15, 2020, or exceeds the 40 *CFR* § 61.92 requirements, then the Paducah Site notifies DOE Headquarters.

All input data used in dose calculations are considered as records requiring “permanent retention.”

6. REPORTS

6.1 INTRODUCTION

This section provides an overview of the reporting requirements that are followed by DOE utilizing data generated under the EMP. These requirements have been established in regulations, statutes, and orders issued by regulatory agencies and by DOE and are addressed specifically in the individual sections of this plan. In addition to the reporting requirements listed, data generated under the EMP also is used in preparing regulatory documents completed under the FFA, as appropriate. Revisions to the groundwater conceptual model use data generated under this EMP.

It is the policy of DOE to comply with all applicable environmental requirements, and those listed here are subject to supersession and/or amendment as well as being variable in applicability to individual DOE facilities.

6.2 REPORTING REQUIREMENTS

The preparation and disposition of reports relevant to EM are shown in Table 4, Applicable Reporting Requirements. The ASER contains a summary for the effluent monitoring and environmental surveillance data for each CY. The ASER includes a summary of sampling results collected throughout the year as part of programmatic, environmental sampling activities and regulatory permit requirements. All permit activities, such as mitigation action plans, new requirements, or emission sources are described.

The ASER also includes the information from the Superfund Amendments Reauthorization Act (SARA) 6.3 Title III, Section 313, *Toxic Chemical Release Inventory Report*, on quantities of nonradiological chemical emissions to the environment from unplanned releases. The ASER also includes the chemicals reported in the Emergency Planning and Right-to-Know Act, Section 312, Hazardous Chemical Inventory.

Table 4. Applicable Reporting Requirements

Reporting	Due Date	Source of Requirement	Requirement
ASER	October 1	DOE O 231.1B and DOE O 458.1 (and ERPP)	All DOE facilities that conduct significant environmental protection programs shall prepare an ASER for DOE. The report must provide a comprehensive review of the environmental surveillance programs, status of environmental compliance, and effluent data for nonradioactive pollutants.
Annual NESHAP Compliance Report	June 30	NESHAP 40 *CFR* Part 61 Subpart H	Reporting shall include results from monitoring of radionuclide emissions to the ambient air, as well as, required dose calculations. Ambient air monitoring data are included in the NESHAP reports for assessment of fugitive and diffuse emission sources.
Discharge Monitoring Report	The 28th of each month	Clean Water Act	Discharge Monitoring Reports are required for compliance with KPDES permit KY0004049.

Table 4. Applicable Reporting Requirements (Continued)

Reporting	Due Date	Source of Requirement	Requirement
Annual PCB Document	July 1	40 *CFR* § 761.180	The Annual PCB Document is required for PCBs in use and PCB wastes.
SARA Section 313	June 1	SARA Title III	Covered facilities shall report to EPA and the Commonwealth of Kentucky, all environmental releases of specified toxic chemicals that are manufactured, processed, or otherwise used in excess of specified thresholds.
SARA Section 312	March 1	SARA Title III	Annual Hazardous Chemical Inventory Report.
C-746-U Landfill Compliance Monitoring Report	Quarterly	401 *KAR* 47:130	This report is required in accordance with the Solid Waste Landfill Permit SW07300014, SW07300015, SW07300045.
Landfill Quarterly Operating Report	Quarterly	401 *KAR* 47:130	This report is required in accordance with the Solid Waste Landfill Permit SW07300014, SW07300015, SW07300045.
C-746-S&T Landfills Compliance Monitoring Report	Quarterly	401 *KAR* 47:130	This report is required in accordance with the Solid Waste Landfill Permit SW07300014, SW07300015, SW07300045.
C-404 Landfill Groundwater Monitoring Report	May, November	401 *KAR* 34:060	This report is required in accordance with Paducah Hazardous Waste Management Facility Permit KY8-890-008-982.
Environmental Monitoring Plan	October 1 Annually	DOE O 436.1 DOE O 458.1 (and ERPP)	Requires a plan to ensure the site's sustainability; characterize the exposures and doses to individuals and to the population; and evaluate the potential impacts to the biota in the vicinity of DOE activity.
Groundwater Protection Plan	Three Years; Last Updated August 2021	401 *KAR* 5:037	Requires a plan to ensure protection for all current and future uses of groundwater and to prevent groundwater pollution.
Best Management Practices Plan	Five Years; Last Updated January 2020	KPDES permit (KPDES permit is required by the Clean Water Act)	This plan is required by KPDES permit KY0004049.
Spill Prevention Control and Countermeasure (SPCC) Plan	Reviewed Every Three Years; Last Updated April 2020	40 *CFR* Part 112	Requires regulated facilities to prepare and implement a SPCC. The purpose of a SPCC Plan is to form a comprehensive spill prevention program that minimizes the potential for discharges.
Annual External Radiation Monitoring Report	March 1	DOE O 458.1 (and ERPP)	This report estimates the external radiation dose on an annual basis; summary info also is included in the ASER.
FFA Semiannual Report	April 30 October 30	FFA	This report is required by the FFA. Data generated in many of the sampling programs referenced in Appendix C are reported in this report.

APPENDIX A

PADUCAH PERMIT SUMMARY

THIS PAGE INTENTIONALLY LEFT BLANK

U.S. DEPARTMENT OF ENERGY PERMIT SUMMARY FOR THE PADUCAH GASEOUS DIFFUSION PLANT

Permit Type	Issuer	Expiration Date	Permit Number	Permittee
AIR				
Title V Air Permit*	Kentucky Division for Air Quality	9/12/2026	V-21-011	Four Rivers Nuclear Partnership, LLC (FRNP)
Conditional Major Operating Air Permit	Kentucky Division for Air Quality	7/27/2026	F-21-018	Mid-America Conversion Services, LLC (MCS)
WATER				
Kentucky Pollutant Discharge Elimination System (KPDES)	Kentucky Division of Water (KDOW)	1/31/2028	KY0004049	U.S. Department of Energy (DOE), FRNP, and MCS
Permit to Withdraw Public Water	KDOW	N/A	0900	FRNP
Water Treatment Registration (Public Water System)	KDOW	N/A	PWS No. 0732457	FRNP
SOLID WASTE				
Solid Waste Landfill Permit [C-746-S Residential Landfill (Closed), C-746-T Inert Landfill (Closed), C-746-U Contained Landfill]	Kentucky Division of Waste Management (KDWM)	11/04/2026	SW07300014 SW07300015 SW07300045	DOE/FRNP
RCRA				
Hazardous Waste Management Facility Permit	KDWM	8/25/2025	KY8-890-008-982	DOE/FRNP

*Operational sampling included in the Title V air permit is considered outside the scope of the Environmental Monitoring Plan. FRNP will implement the appropriate operational sampling to meet the requirements of the Title V air permit.

U.S. DEPARTMENT OF ENERGY COMPLIANCE AGREEMENTS SUMMARY FOR THE PADUCAH GASEOUS DIFFUSION PLANT

Agreement	Effective Date	Expiration Date	Entities
TSCA CA (Toxic Substances Control Act Compliance Agreement)	05/2017 (Modification)	N/A	U.S. Environmental Protection Agency (EPA) and DOE
Federal Facility Compliance Agreement Agreed Order/Site Treatment Plan	09/1997	N/A	KDWM and DOE
Federal Facility Agreement	02/1998	Ongoing	Commonwealth of Kentucky, EPA, and DOE
Agreed Order for Waste, Air, and Water Violations	10/2003	Ongoing	Commonwealth of Kentucky and DOE
Agreed Order for DUF_6 Management	10/2003	Ongoing	KDWM and DOE

[a] MW initial lithologic log indicated well was completed in the RGA; however, the lithology has been reinterpreted to show a higher top of McNairy.
[b] MWs associated with Southwest Plume project. These MWs are not required to be sampled in fiscal year (FY) 2023.
[c] PZs associated with the Solid Waste Management Unit (SWMU) 4 project. These PZs will be evaluated for their acceptance into the environmental monitoring program. Abandonment will be determined after the completion of the evaluation.
[d] Transect monitoring wells associated with the Northeast Plume Optimization project.
[e] PZs associated with the Northeast Plume Optimization project.

Table B.1. Well Program Inventory (Continued)

[f] MW152 was abandoned in October 2018 in order for the Tennessee Valley Authority to construct a new process water basin. Another location has been selected for installation of a new well. This new well will be MW583.
[g] MW153 was abandoned in October 2018 in order for the Tennessee Valley Authority to construct a new process water basin.
[h] MWs installed as part of the C-400 Remedial Investigation/Feasibility Study.
[i] MWs and performance MWs installed and sampled as part of the SWMU 211-A Enhanced *In Situ* Bioremediation project. These MWs will be sampled under the environmental monitoring program in FY 2024.
[j] Residential wells along Ogden Landing Road are being sampled in support of the Groundwater Strategy project and Water Policy.
[k] PZs are associated with the C-400 Remedial Investigation/Feasibility Study. Water level measurements are not collected from these PZs.
Note: Piezometers now will be given an MW designation and noted as (PZ) to be consistent with the remedial action work plans.
Note: Residential wells inside of the Water Policy Box will be inspected during a Comprehensive Environmental Response, Compensation, and Liability Act Five-Year Review period to verify that the well is not functioning as a water source. There are residential wells that are not sampled and are not listed in this table, but will be included in this inspection. Those residential wells outside of the Water Policy Box may be accessed by the landowner.

Table B.2 includes an inventory of nonconventional borings. Nonconventional borings are defined as those borings that were installed as part of a short-term project where the borings never were part of the Environmental Monitoring well inventory or the borings were not part of the well inventory in recent years.

*During walkdowns performed in preparation of the fieldwork for the MW abandonment project, it was discovered that this PZ had not been abandoned previously. This PZ was abandoned during the MW abandonment project in 2020.

WATER LEVELS

Water level measurements are divided into two programs: (1) measurement of water levels at wells that support potentiometric surface map development in relation to the permitted landfills (measured quarterly as indicated in Table B.3); and (2) measurement of water levels at the remaining wells (measured quarterly) as indicated in Table B.4. The remaining wells are defined as those remaining wells from Appendix B of this Environmental Monitoring Plan. Wells associated with the potentiometric surface maps at the permitted landfills are measured within as short a time period as possible, not to exceed a three-day period. (Note: Wells denoted as "commitment wells" are those wells formally agreed upon to be measured, but are not listed specifically in the permit. Wells denoted as "noncommitment wells" are measured as a best management practice.) In support of the Groundwater Strategy project and groundwater modeling at the site, the synoptic water level events will continue to be performed quarterly for FY 2023. Also in support of the Groundwater Strategy project, water level measurements will be collected from Metropolis Lake at the same time as the quarterly synoptic water level events.

An investigation is being performed under the Groundwater Strategy project to evaluate the extent of trichloroethene and groundwater flow trends at the site. This investigation began in January 2020 and is continuing through FY 2023. In FY 2023, manual water level measurements and pressure transducer (PT) measurements will be used to measure the potentiometric surface and seasonal changes in the potentiometric surface. MWs to be evaluated under this project are included in Table B.5.

[a] Per a DOE commitment, PPPO-02-640-08, (pertaining to C-404 Landfill permitting process) water level measurements will be taken for seven additional wells that were not cited within the permit within a 24 hour window of when water level measurements are collected on the C-404 wells cited in the permit. Although these wells are not identified in the permit, the obtained water level measurement data will be reported to Kentucky Division of Waste Management as part of the semiannual report.

[b] Wells are cited in the Solid Waste Landfill Permit for C-746-S&T and C-746-U Landfills.

[c] Based on the approved permit on for the C-746-S&T Landfills, these two wells are cited in the permit; however, the permit only requires water level measurements for these wells.

[a] Per the Operations & Maintenance Plan for the Northeast Plume Containment System, depending on longevity of the remedial system, these measurements may be necessary to characterize flow directions and system performance. Water levels are collected during the quarterly synoptic water level events.

C.1. INTRODUCTION

Four-hundred five monitoring wells (MWs) and piezometers are active and monitored as part of the Environmental Monitoring (EM) Program. Active wells either are in an analytical sampling program or may be evaluated only for water level measurements. This appendix shows a summary of each analytical sampling program. (Note: Wells denoted as "noncommitment wells" are measured as a best management practice, but are not listed in the permit.)

In addition to MW locations, the sampling programs within this appendix include sampling parameters for other locations covered in the EM Program (i.e., surface water and sediment programs).

Each summary includes the environmental sampling frequencies, parameters, analytical methods, the sampling drivers, rationale for conducting the sampling, which document(s) the sampling results are reported in, and a list of locations that are sampled.

An effort has been made to reduce the amount of sampling performed to support fiscal responsibility of the EM program at the site. The criteria used to determine less frequent sampling include the following:

- New understanding of contaminant migration pathways and contaminants present,
- Review of historical results and long-term trends,
- Analyses to determine if the MW meets the current and future objectives of the Groundwater Operable Unit, and
- Addition of new MWs that may eliminate the need for sampling older MWs.

A brief summary of changes that have been made from the fiscal year (FY) 2022 to the FY 2023 Environmental Monitoring Plan (EMP) is included in each sampling program section. The changes described in this appendix were made using the criteria listed above. Data collected under the sampling programs defined in this appendix will be evaluated in FY 2023. Based on trending results, if changes are deemed appropriate, they will be proposed via a permit modification or via modification of the appropriate driver and reflected in the FY 2024 EMP. In those cases where sampling cannot be performed due to an uncontrollable condition, such as blocked access to an MW due to flooding conditions, the sampling staff will denote the reason as to why the sample could not be collected.

A screening assessment that includes additional per- and polyfluoroalkyl substances (PFAS) data is needed to perform an initial sitewide evaluation for the presence of PFAS in environmental media and drinking water[1] at the Paducah Site. Appendix E, Attachment E-2 contains sampling locations that will be included in this screening assessment. Sampling locations include a subset of MWs from all groundwater monitoring programs included in this FY 2023 EMP, Kentucky Pollutant Discharge Elimination System (KPDES) outfalls, and landfill leachate.

[1] For the purposes of the PFAS sampling described herein, "drinking water" refers to potable water from the site water treatment plant (C-611) and does not include bottled drinking water provided by an off-site vendor and available to site personnel.

THIS PAGE INTENTIONALLY LEFT BLANK

C.2. GROUNDWATER MONITORING

The Paducah Site samples MWs and residential wells on a routine basis. Additionally, MWs are monitored for water levels on a routine basis. The EM manager is responsible for accepting any new MWs installed and assuring that the wells meet the following standards:

(1) Construction requirements, as outlined in either the statement of work, field sampling plan, or work plan for the project;

(2) Acceptance criteria for well development, as outlined in the U.S. Department of Energy's (DOE) Four Rivers Nuclear Partnership, LLC (FRNP) procedures;

(3) Requirements for pump and packer placement; and

(4) The well is functioning properly and has no deficiencies.

MWs that do not meet these requirements will not be accepted by the EM manager until all deficiencies have been corrected. More specific requirements to the acceptance of MWs are detailed in procedure CP4-ES-0069*, Monitoring Well and Associated Infrastructure Installation*. MWs are inspected, at a minimum, on an annual basis per the procedure CP4-ES-0074, *Monitoring Well Inspection and Maintenance*. Outlines for well rehabilitation methods are found in CP2-ES-0024, *Monitoring Well Maintenance Implementation Plan for the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*.

Specified methods found in Appendix C are U.S. Environmental Protection Agency (EPA)-approved methods, as applicable. In some instances, such as with radionuclides, EPA-approved methods are unavailable. For this EMP, the currently used laboratory's analytical procedure is noted as the method of choice. If an analysis is conducted at another laboratory during FY 2023, an equivalent procedure will be used upon approval by the EM manager.

C.2.1 GROUNDWATER MONITORING PROGRAM FOR LANDFILL OPERATIONS

C-746-S, C-746-T, and C-746-U Landfills (Solid Waste Landfill Monitoring)

Frequency: Quarterly

Driver: Sampling requirements are outlined in the Solid Waste Landfill Permit SW07300014, SW07300015, SW07300045 issued by the Kentucky Division of Waste Management (KDWM) and *Groundwater Monitoring Plan for the Solid Waste Permitted Landfills (C-746-S Residential Landfill, C-746-T Inert Landfill, and C-746-U Contained Landfill) at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, PAD-PROJ-0139, June 2014.

Reported: Quarterly Compliance Monitoring Reports, as required by the permit, and the Annual Site Environmental Report (ASER)

Rationale: To evaluate the potential impact of historical waste disposal activities at the C-746-S&T Landfills, as well as historical and current waste disposal activities at the C-746-U Landfill on groundwater quality and to comply with compliance monitoring requirements, as set forth in the solid waste landfill permit.

Comments: For Solid Waste Landfill Permit, SW07300014, SW07300015, SW07300045, the reporting requirement for maximum contaminant level (MCL) is as follows: "If the analysis of

groundwater sample results indicates contamination (i.e., a statistical or MCL exceedance) as specified in 401 *KAR* 48:300 Section 8(1), the owner or operator shall notify the Cabinet within (forty-eight) 48 hours of receiving the results and shall arrange to split sample no later than ten (10) days from the receipt of the results. [401 *KAR* 48:300 Section 7]"

MW sampling is performed and reported collectively for the C-746-S and C-746-T Landfills. Sample collection order is as follows: volatiles (including total organic halides), dissolved gases and total organic carbon, semivolatile organics, metals and cyanide, water quality cations and anions, and radionuclides. If samples are being collected at a location where it is anticipated that sample volume is not adequate, then the order of collection will be volatiles followed by radionuclides.

Data collected under this program will be evaluated. Based on trending results, if changes are deemed appropriate, they will be proposed via a permit modification and reflected in the FY 2024 EMP.

Tables C.1 and C.2 list MWs for the C-746-S, C-746-T, and C-746-U Landfills, and Table C.3 lists the quarterly analytical parameters for these landfills. Locations are shown on Figure C.1.

Table C.1. C-746-S and C-746-T Landfills Wells (23)[a]

MW220	MW370[b]	MW387	MW393
MW221	MW372[b]	MW388	MW394
MW222	MW373[b]	MW389	MW395
MW223	MW384	MW390	MW396
MW224	MW385	MW391	MW397
MW369[b]	MW386	MW392	

[a] The total number of wells cited in the permit associated with the C-746-S&T Landfills is 25; however, two of these wells (MW225, MW353) only require water level measurement. The total number of analytically measured wells, therefore, is 23.
[b] Wells are sampled with the C-746-U Landfill sampling event; these four wells are not counted in the sampling event for the C-746-S&T Landfills, but are reported in the Compliance Monitoring Reports for both the C-746-U and C-746-S&T Landfills. These wells are upgradient wells for the C-746-U Landfill and are downgradient wells for the C-746-S&T Landfills.

Table C.2. C-746-U Landfill Wells (21)

MW357	MW363	MW368	MW373*
MW358	MW364	MW369*	MW374
MW359	MW365	MW370*	MW375
MW360	MW366	MW371	MW376
MW361	MW367	MW372*	MW377
MW362			

*These four wells are not counted in the totals for the C-746-S&T Landfills, but are reported in the Compliance Monitoring Reports for both the C-746-U and C-746-S&T Landfills. These wells are upgradient wells for the C-746-U Landfill and are downgradient wells for the C-746-S&T Landfills.

Table C.3. C-746-S, C-746-T, C-746-U Quarterly Analytical Parameters

Volatiles—Method 8260D unless noted		
1,1,1,2-Tetrachloroethane	Acetone	Dibromochloromethane

Beta Activity—9310	**Strontium-90—905.0M**	**Thorium-232[d]—Th-01-RC M**
Radium-226—AN-1418	**Technetium-99—TC-02-RC M**	**Tritium—906.0M**

[a] Xylenes

[b] Permit does not require analysis of dissolved metals. These parameters are analyzed in support of understanding the source of contaminants potentially observed in wells in comparison to total metals.

[c] Polychlorinated biphenyls (PCBs) are required under the solid waste permits to be monitored quarterly for the C-746-U Landfill and annually for the C-746-S&T Landfills.

[d] Permit does not require analysis of radium-228 and thorium-232. These parameters are analyzed in support of demonstrating compliance with DOE Order 458.1 for the C-746-U Landfill.

Methods included in table are equivalent methods to those listed in the current *Groundwater Monitoring Plan for the Solid Waste Permitted Landfills (C-746-S Residential Landfill, C-746-T Inert Landfill, And C-746-U Contained Landfill) at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, PAD-PROJ-0139.

Bolded parameters are analyzed by different method than specified in header.

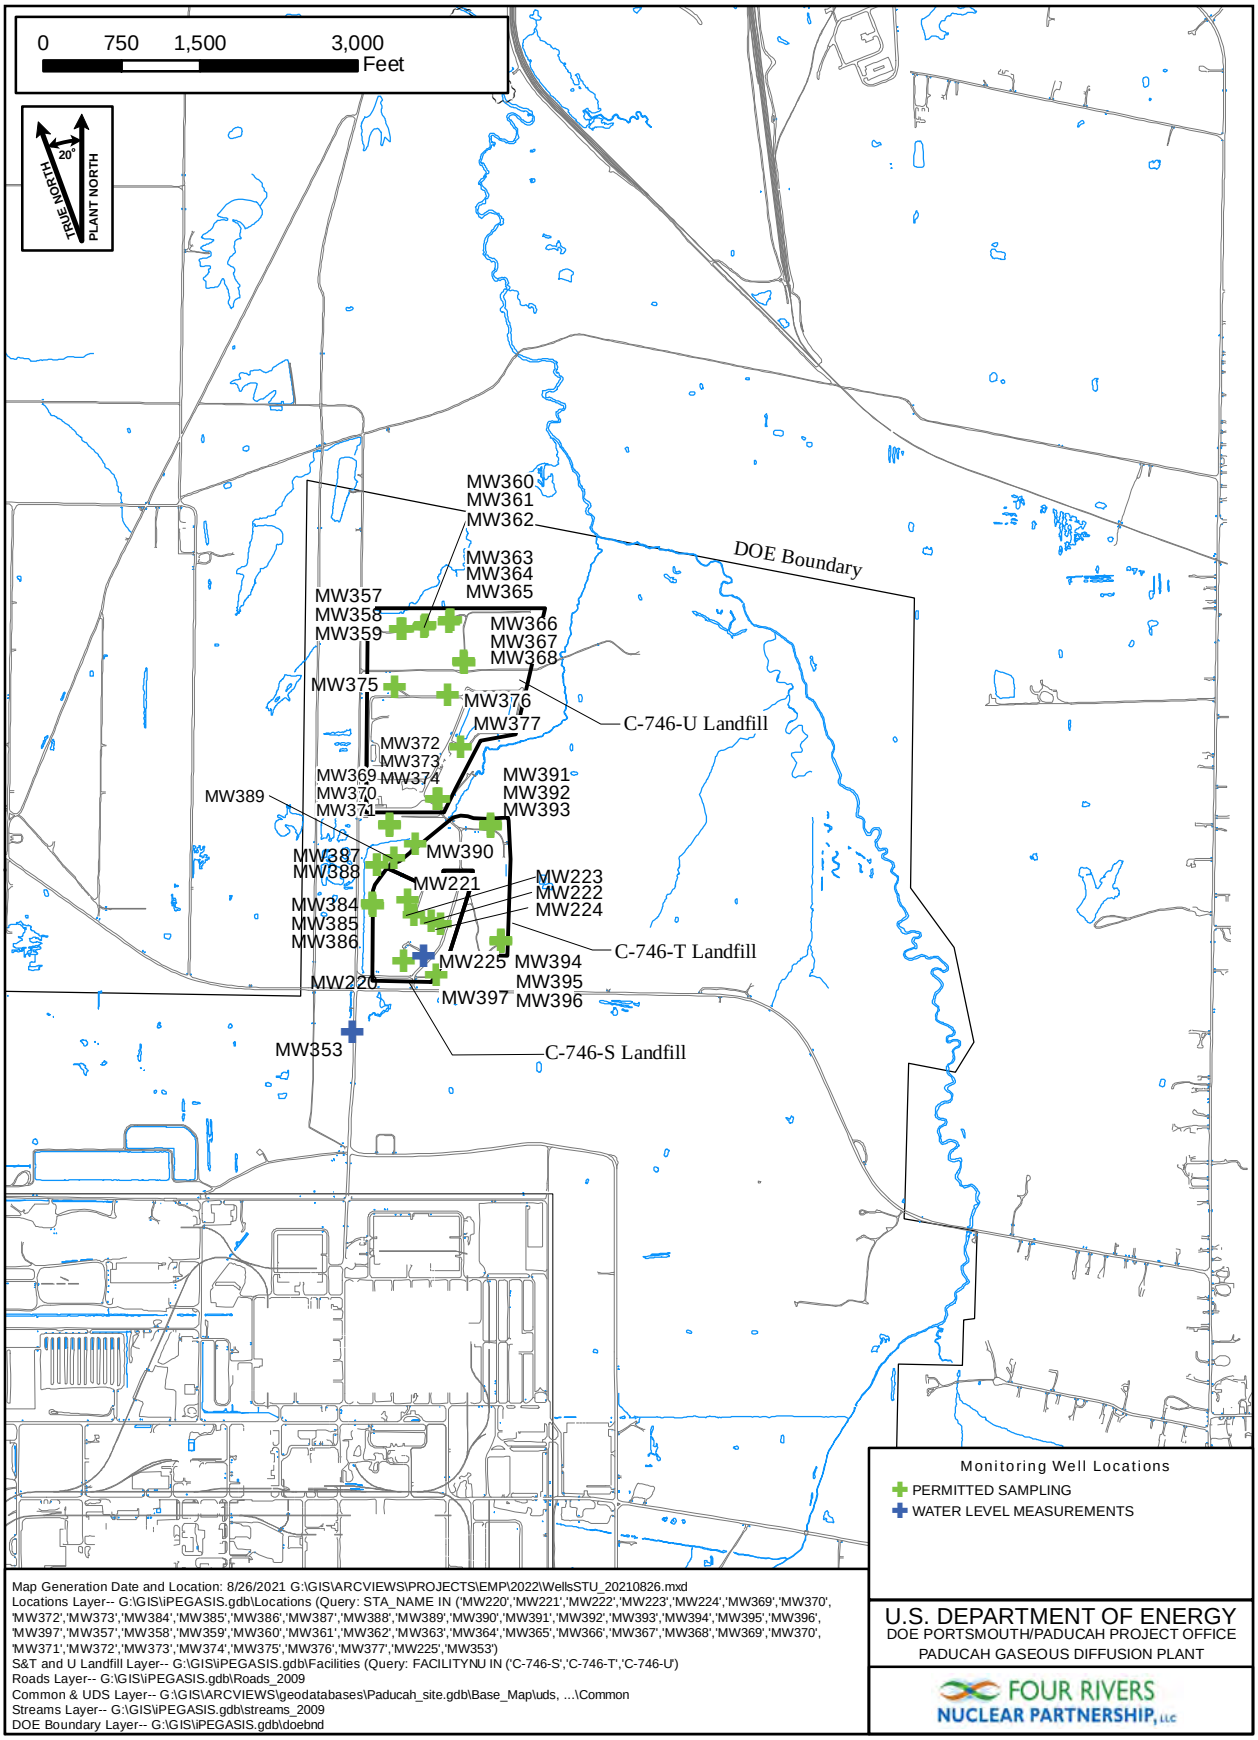

Figure C.1. Groundwater Monitoring Wells near the C-746-S, T, and U Landfills

C-404 Low-Level Radioactive Waste Burial Ground (Resource Conservation and Recovery Act Detection Status Monitoring)

Frequency: Quarterly and Semiannually

Driver: The semiannual parameters are required to be sampled per Hazardous Waste Management Facility Permit, KY8-890-008-982. Compliance monitoring for radiological constituents will be conducted quarterly, as noted below in the comments section.

Reported: Semiannual C-404 Groundwater Monitoring Report required by the permit, Semiannual Federal Facility Agreement (FFA) Progress Report, and the ASER

Rationale: To monitor the C-404 Low-Level Radioactive Waste Burial Ground under detection monitoring program regulations.

Rule: Perform statistical evaluation for each constituent to determine if there is a statistically significant exceedance over background levels. If a statistically significant exceedance is indicated, notification to KDWM must be made within 7 days of confirmation of the exceedance. The statistical exceedance is evaluated with respect to the 2007 alternate source demonstration (ASD) to determine if the results are consistent with findings of the ASD. This evaluation will assess whether the contamination is from the C-404 Landfill or another source.

Comments: In the event that only a partial sample can be obtained, the following priority will be followed: field parameters, trichloroethene (TCE), and metals. The dissolved metal samples (arsenic, cadmium, chromium, lead, mercury, selenium, and uranium) are filtered at the off-site laboratory.

An ASD was conducted in 2021 in response to a statistical exceedance for Technetium-99 (Tc-99) in MW84A. This ASD has determined that the Tc-99 contamination is indicative of dissolved contamination in the Regional Gravel Aquifer (RGA) and is not derived from contamination associated with the construction of RGA well MW84A. In accordance with the permit, compliance monitoring for radiological constituents was conducted quarterly at the C-404 Landfill during FY 2022. Compliance monitoring for radiological constituents will continue to be conducted quarterly during FY 2023 until the required groundwater fate and transport report is submitted and a decision is made to change the sampling frequency.

In support of an ASD at the C-404 Landfill, additional metals analysis are performed on some MWs that are not required to be sampled under the landfill permit issued by KDWM. Additionally, sulfate analysis is performed on the C-404 Landfill MWs. The sulfate analysis provides key information to assess the significance of biological activity and abiotic processes in the wells. The data will be evaluated, and any necessary changes to the monitoring will be reflected in the FY 2024 EMP.

Field parameters (pH, temperature, conductivity, dissolved oxygen, oxidation-reduction potential, and turbidity) are measured using a water quality meter. Other field parameters, such as depth to water and barometric pressure, are measured prior to sampling.

Prior to sample collection, KDWM shall be notified one week in advance. Notification may be made in writing or electronic format. Electronic mail shall be submitted to pertinent KDWM field personnel.

A listing of MWs for the C-404 Landfill is presented in Table C.4 and the analytical parameters are presented in Table C.5. Locations are shown on Figure C.2.

Table C.4. C-404 Landfill Wells

C-404 Landfill Wells (9)			
MW84A	MW88	MW91A	MW94
MW85	MW90A	MW93A	MW420
MW87A			
Noncommitment Wells (12)[a] TCE, Tc-99, and Field Parameters			
MW67	MW89	MW226	MW337
MW76	MW92	MW227	MW338
MW86	MW95A	MW333	MW548[b]
Noncommitment Wells (7) Metals and Field Parameters			
MW227	MW414	MW549	MW551
MW333	MW416	MW550	

[a] Routine sampling of these wells is not required by the permit. MWs 414 and 416 are also part of this special sampling event; however, only depth to water measurements are collected for these two wells.
[b] MW548 was installed during Phase V of Solid Waste Management Unit (SWMU) 4 and is intended to serve as a complementary well to MW333 in order to detect trends for TCE in the RGA near the C-404 Landfill.

Table C.5. C-404 Landfill Quarterly[a] and Semiannual Analytical Parameters

Volatiles—Method 8260D			
Trichloroethene			
Metals—6020B unless noted			
Arsenic	Lead	Uranium	Lead, Dissolved[b]
Cadmium	Manganese[b]	Arsenic, Dissolved[b]	**Mercury, Dissolved—7470A[b]**

Technetium-99—TC-02-RC M	Uranium-234	Uranium-235	Uranium-238
Miscellaneous			
Total Organic Carbon—9060A[b]	**Sulfate—9056A[b]**		

[a] Quarterly sampling will be for radionuclides only.
[b] Not required by the permit.
Bolded parameters are analyzed by different method than specified in header.
Alternate SW-846 methods may be substituted with prior written approval from KDWM.

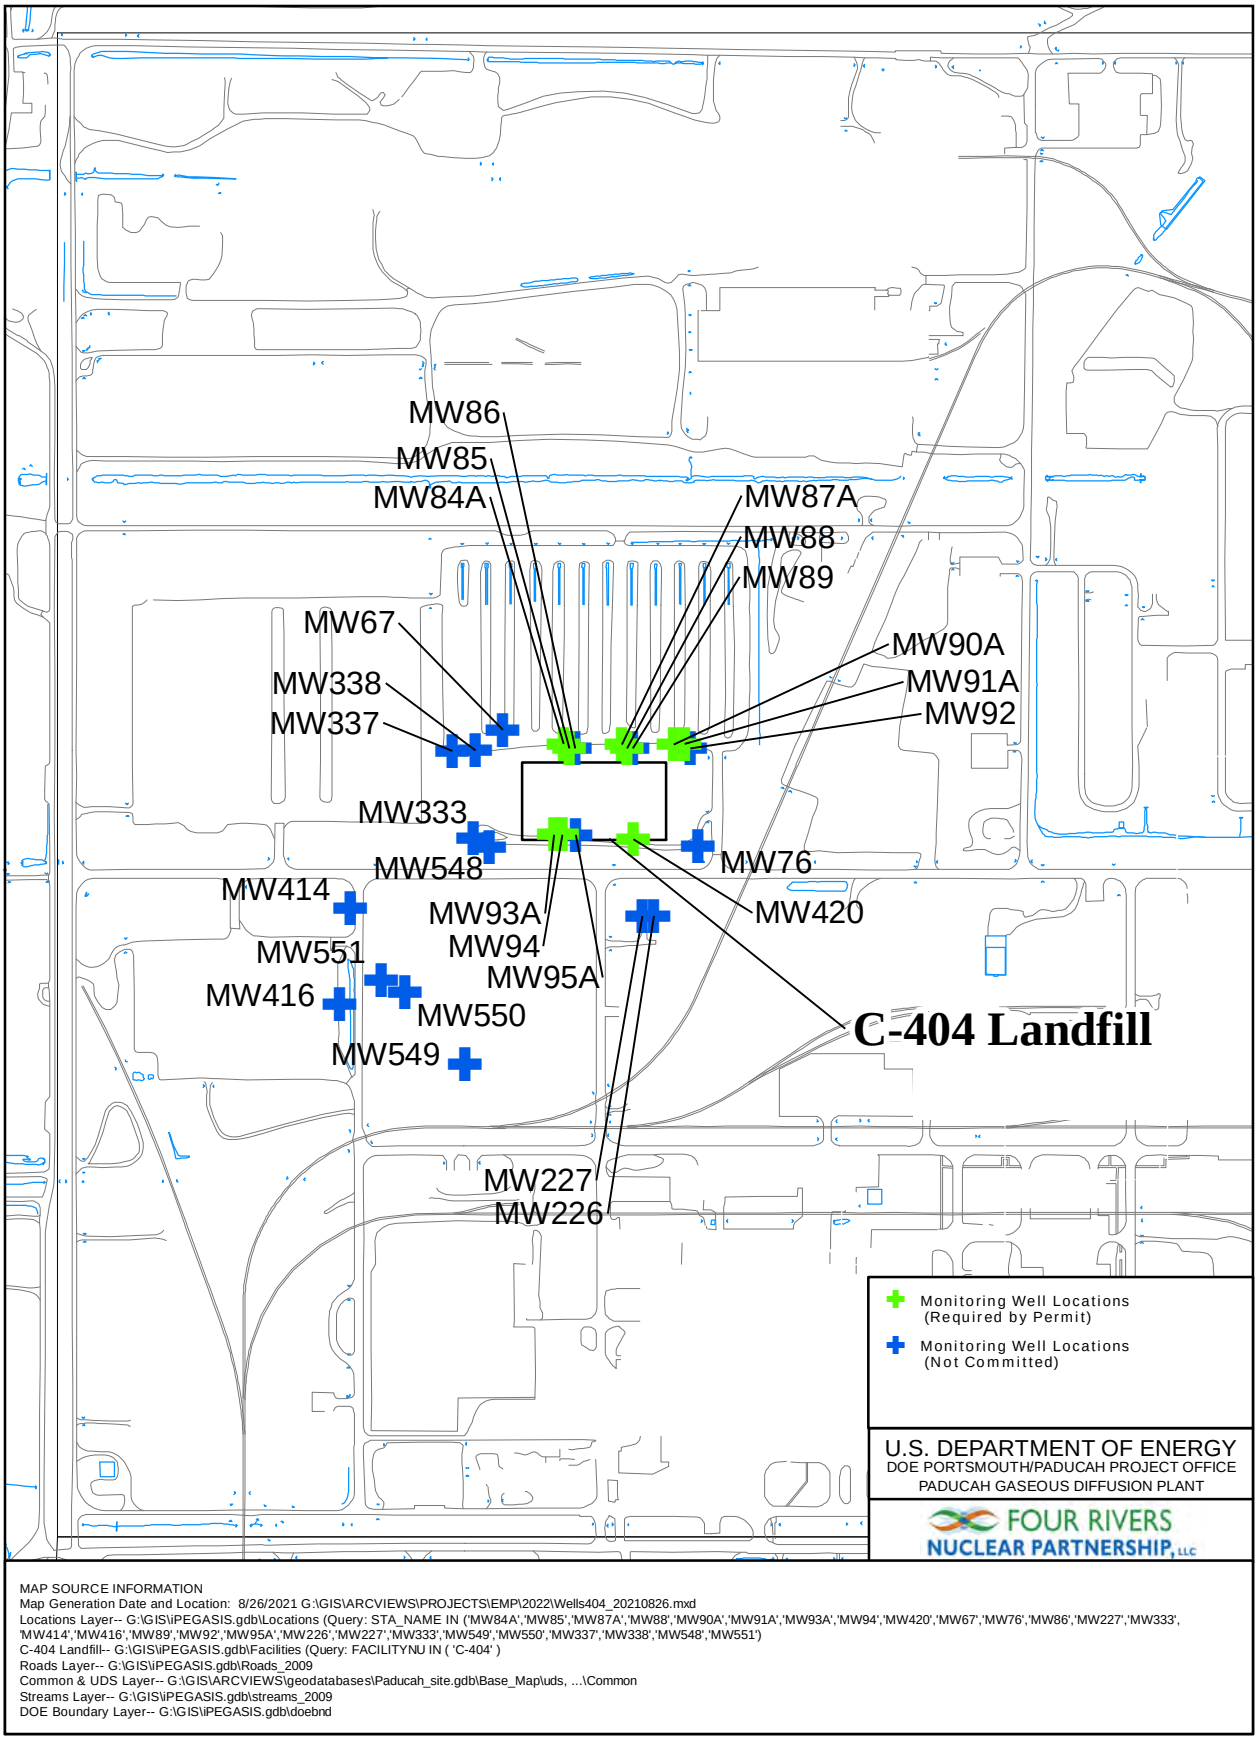

Figure C.2. Groundwater Monitoring Wells Near C-404 Landfill

C-746-K Landfill Monitoring

Frequency: Semiannually

Driver: *Record of Decision for Waste Area Groups 1 and 7 for the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/OR/06-1470&D2, September 1997: Even though the Record of Decision (ROD) for Waste Area Groups 1 and 7 was a Surface Water Operable Unit decision document, sampling of MWs is noted in the ROD. The ROD also allows for annual evaluation of the program with documentation in the *Sampling and Analysis Plan Addendum*, KY/ER-2, which previously was superseded by the EMP.

Reported: Semiannual FFA Progress Report and the ASER

Rationale: To evaluate the potential impact of historical waste disposal activities at the C-746-K Landfill on groundwater quality.

Comments: In the event a well becomes dry while purging, no sample will be taken; however, it should be recorded that no sample was collected because the well was dry. Starting in 2005, the frequency was reduced from quarterly to semiannually.

Sampling frequencies and sampling parameters were not modified for this sampling program for FY 2023.

Tables C.6 and C.7 provide a listing of landfill wells and analytical parameters, respectively. Locations are shown on Figure C.3.

Table C.6. C-746-K Landfill Wells (3)

Bolded parameters are analyzed by different method than specified in header.

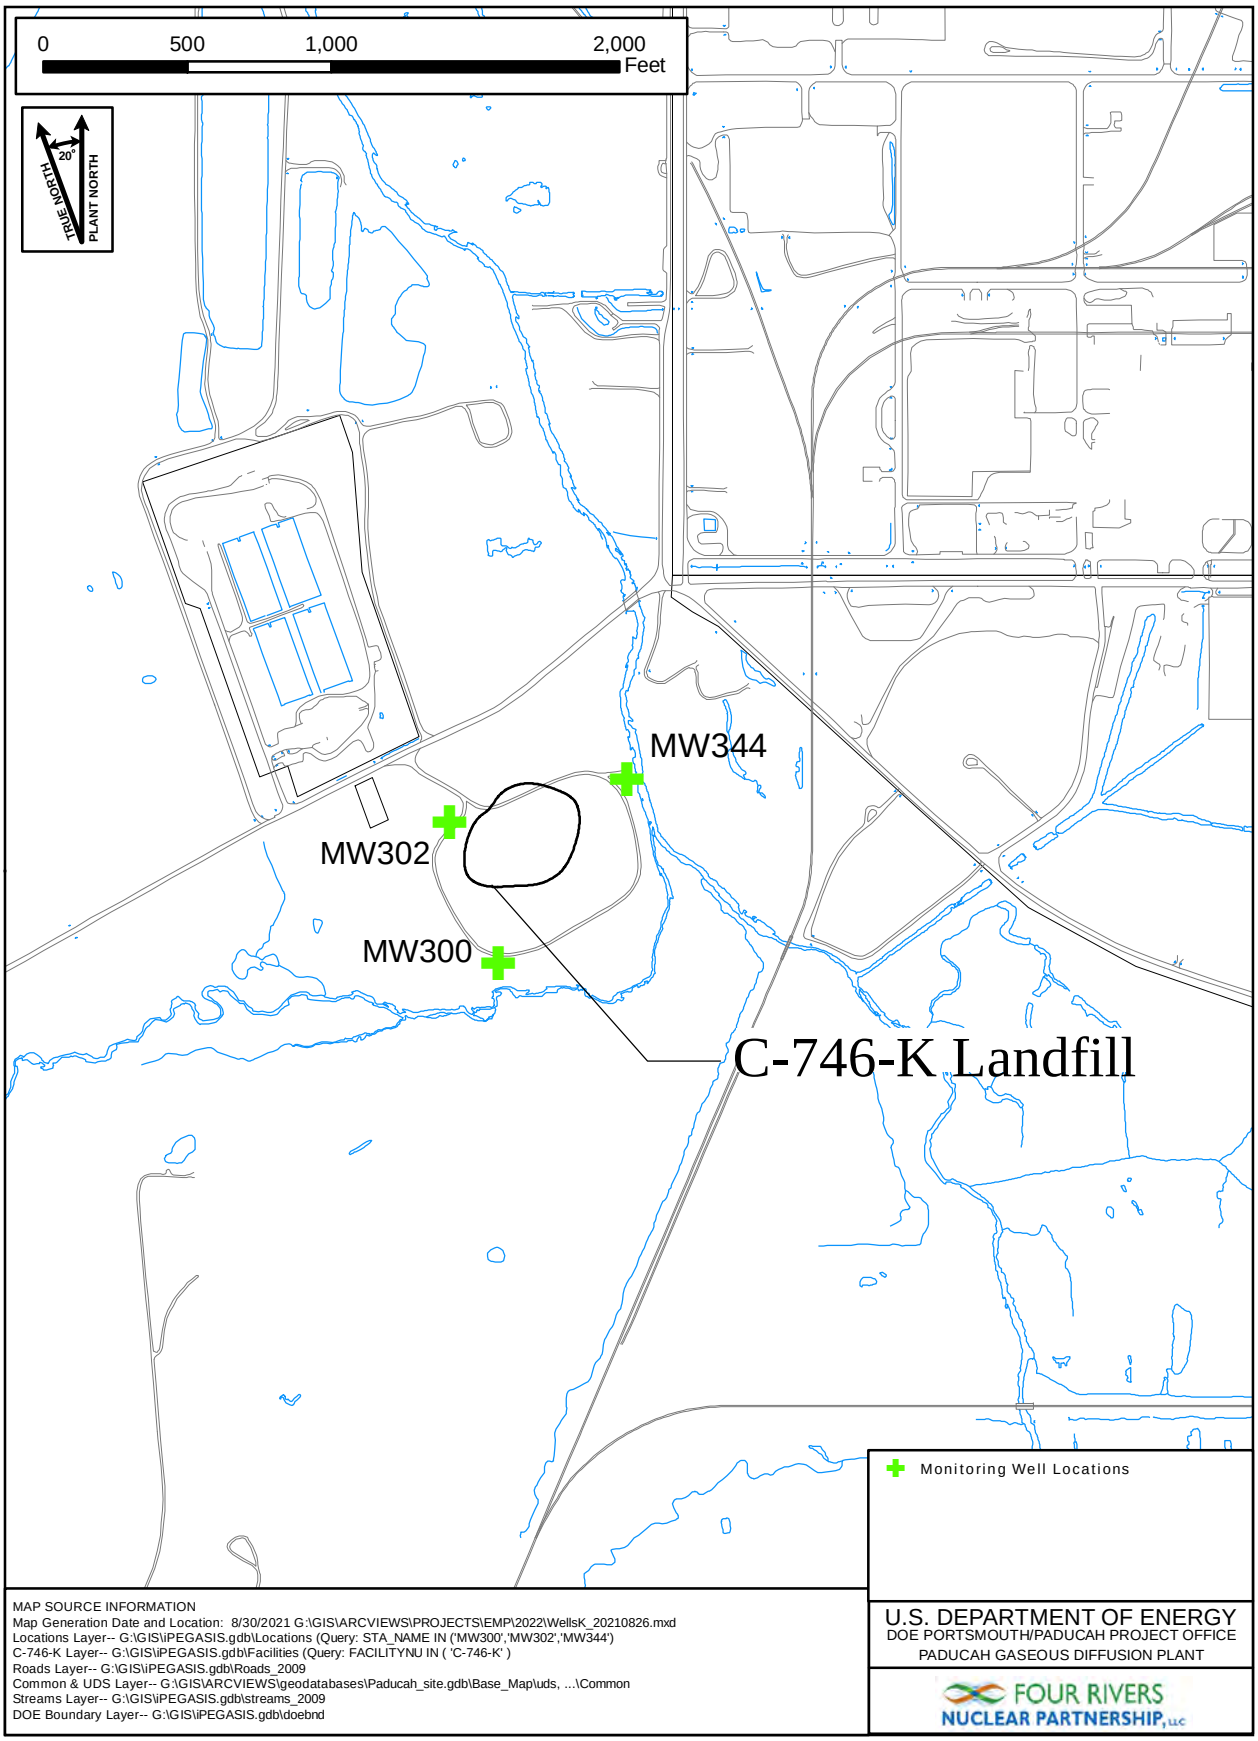

Figure C.3. Groundwater Monitoring Wells near C-746-K Landfill

C.2.2 NORTHEAST PLUME OPERATION AND MAINTENANCE PROGRAM

Northeast Plume Monitoring

Frequency: Quarterly

Driver: The MWs are required to be sampled by the *Operation and Maintenance Plan for the Northeast Plume Containment System Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-2470&D1, November 2021, and by the *Remedial Action Work Plan for the Optimization of the Northeast Plume Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-1280&D2/R3/A1, July 2018.

Per the *Memorandum of Agreement for Resolution of Informal Dispute Concerning U.S. Environmental Protection Agency and Kentucky Department for Environmental Protection Requirements for Additional Actions or Modifications Regarding the CY 2018 Five-Year Review for Remedial Actions at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, *DOE/LX/07-2426&D2*, July 2020, the Operation and Maintenance Plan for the Northeast Plume was revised to incorporate elements of Water Policy boundary monitoring currently conducted under the EMP in November 2020.

Reported: Semiannual FFA Progress Report and ASER

Rationale: To monitor the nature and extent of groundwater contamination and to evaluate any trends in water quality that may affect contaminant migration.

Comments: The extraction wells (EWs) (or other operational samples) are not sampled under the groundwater program as part of the EM Program. They are sampled as specified under the Operation and Maintenance Plan for the Northeast Plume.

The Northeast Plume EW system has undergone an optimization. New EWs have been installed in new locations closer to the site due to the decreasing concentration of contaminants at their current locations. This optimization program included two new EWs, EW234 and EW235, and 22 piezometers and MWs. Sampling frequencies and sampling parameters required by the *Operation and Maintenance Plan for the Northeast Plume Containment System Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-2470&D1, November 2021, and the *Remedial Action Work Plan for the Optimization of the Northeast Plume Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-1280&D2/R3/A1, July 2018, are included in Table C.8. The EWs (and other operational samples) are not sampled under the groundwater program as part of the EM Program. They are sampled as specified under the Operation and Maintenance Plan listed above for the Northeast Plume. Locations are shown on Figure C.4.

Sampling frequencies and sampling parameters were not modified for this sampling program for FY 2023.

Table C.8. Northeast Plume Optimization Quarterly Wells and Parameters

Quarterly Wells (36)			
MW124	MW126	MW144	MW145
MW155	MW156	MW163	MW255[a]
MW256[a]	MW258	MW260	MW283
MW288	MW291	MW292	MW293A
MW341	MW478	MW479	MW480
MW495	MW496	MW524	MW525
MW526	MW527	MW528	MW529
MW530	MW531	MW533	MW536
MW537	MW538	MW539	MW556

Quarterly Analytical Parameters			
Volatiles—Method 8260D			
1,1-Dichloroethene	Trichloroethene		
Radionuclides—Method TC-02-RC M			
Technetium-99			
Field Parameters			
Barometric Pressure	Depth to Water	Redox	Temperature
Conductivity	Dissolved Oxygen	pH	Turbidity

[a] Northeast Plume Operation and Maintenance plan requires semiannual sampling of MW255 and MW256; however, these wells are sampled more frequently (quarterly) to provide timely assessment of Northeast Plume optimized extraction well operations.

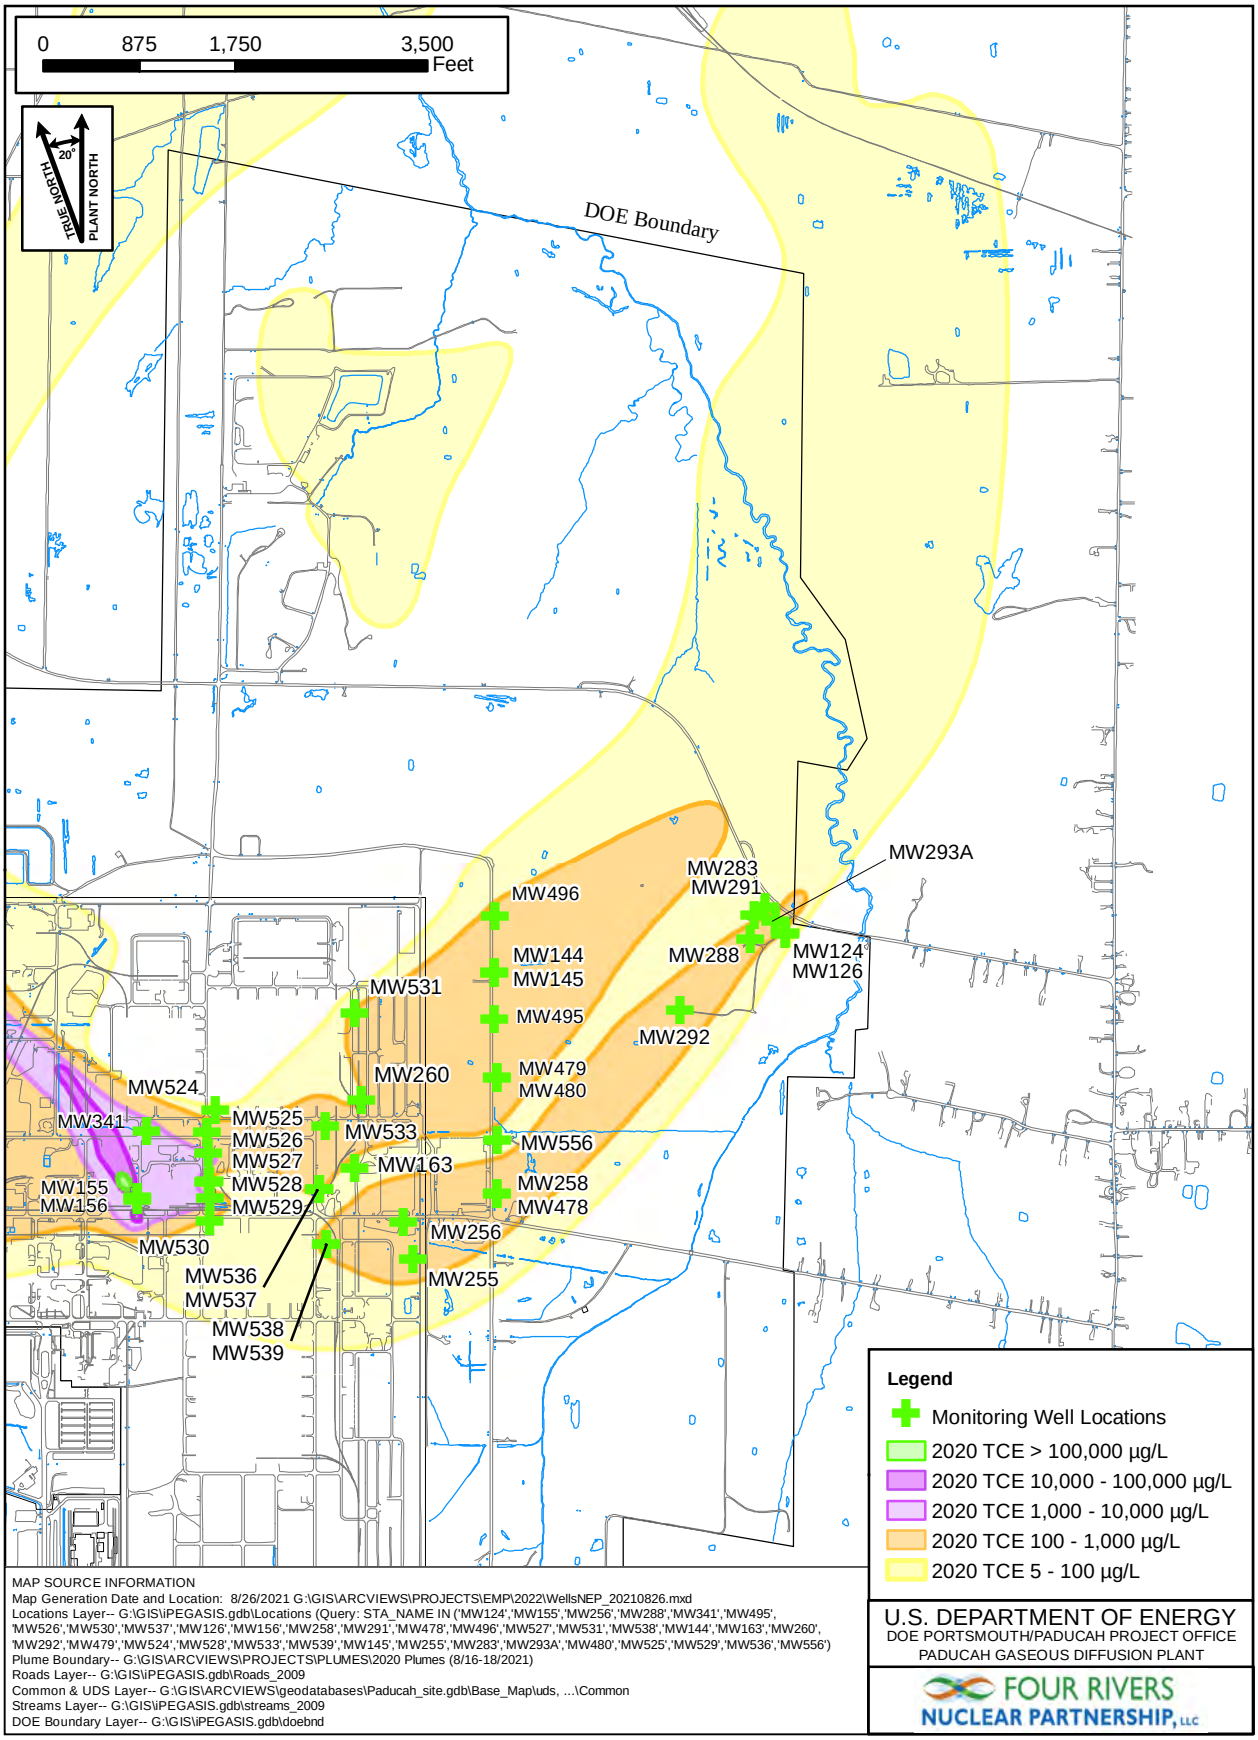

Figure C.4. Northeast Plume Monitoring Wells

C.2.3 NORTHWEST PLUME OPERATION AND MAINTENANCE PROGRAM

Northwest Plume Monitoring

Frequency: Quarterly and Semiannually

Driver: The MWs are required to be sampled by the *Operation and Maintenance Plan for the Northwest Plume Groundwater System Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-2469&D2, October 2021.

Per the *Memorandum of Agreement for Resolution of Informal Dispute Concerning U.S. Environmental Protection Agency and Kentucky Department for Environmental Protection Requirements for Additional Actions or Modifications Regarding the CY 2018 Five-Year Review for Remedial Actions at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky, DOE/LX/07-2426&D2*, July 2020, the Operation and Maintenance Plan for the Northwest Plume was revised to incorporate elements of Water Policy boundary monitoring currently conducted under the EMP in November 2020.

Reported: Semiannual FFA Progress Report and the ASER

Rationale: To determine the effectiveness of the optimization of Northwest Plume operations, monitor the nature and extent of groundwater contamination, and evaluate any trends in water quality that may affect contaminant migration.

Comments: The extraction wells (or other operational samples) are not sampled under the groundwater program as part of the EM Program. They are sampled as specified under the Operation and Maintenance Plan for the Northwest Plume.

The sampling frequency for MW460 within the Operation and Maintenance Plan is semiannual; however, the frequency of sampling was increased to quarterly in FY 2018 in order to evaluate trends in TCE concentrations along the Northwest Plume.

The sampling frequency for MW339, MW340, MW455, and MW456 within the Operation and Maintenance Plan is semiannual; however, the frequency of sampling is being increased to quarterly in FY 2023 in order to evaluate trends in TCE and Tc-99 concentrations along the Northwest Plume.

Table C.9 provides a listing of MWs, and Table C.10 provides the analytical parameters for these MWs. Locations are shown on Figure C.5.

Table C.9. Northwest Plume Wells

Semiannual Wells (28)

Figure C.5. Northwest Plume Monitoring Wells

C.2.4 C-400 MONITORING WELLS

C-400 Wells

Frequency: Quarterly and Semiannually

Driver: MWs are required to be sampled by the *Record of Decision for Interim Remedial Action for the Groundwater Operable Unit for the Volatile Organic Compound Contamination at the C-400 Cleaning Building at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/OR/07-2150&D2/R2, July 2005.

Reported: Semiannual FFA Progress Report and the ASER

Rationale: These MWs will provide a meaningful tool for evaluating the downgradient dissolved-phase contamination in the Northwest Plume and the efficacy of the C-400 Interim Remedial Action. These MWs also were sampled under the *Remedial Investigation/Feasibility Study Work Plan for the C-400 Complex Operable Unit at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-2433&D2/R1, March 2020. The results of continued monitoring in all MWs will support the upcoming remedial action(s) at C-400.

Comments: MW178 and MW341 are sampled quarterly and results will support the upcoming remedial action(s) at C-400.

Analyses of PCBs and polycyclic aromatic hydrocarbons (PAHs) for MW405 Port 5, MW406 Port 5, MW407 Port 4, and MW408 Port 5 are no longer needed to support C-400 remedial action(s). These analyses are being removed from this program.

Table C.11 provides a listing of the C-400 MWs, and Table C.12 provides the analytical parameters for these MWs. Locations are shown on Figure C.6.

Table C.11. C-400 Monitoring Wells (37)

Quarterly Wells (29)		
MW155	MW507*	MW566
MW156	MW557	MW567
MW178	MW558	MW568
MW341	MW559	MW569
MW405: Port 5	MW560	MW570
MW406: Port 5	MW561	MW571
MW407: Port 4	MW562	MW572
MW408: Port 5	MW563	MW573
MW505*	MW564	MW574
MW506*	MW565	
Semiannual Wells (8)		
MW175	MW421: Port 1, Port 2, Port 3	MW424: Port 1, Port 2, Port 3
MW342	MW422: Port 1, Port 2, Port 3	MW425: Port 1, Port 2, Port 3
MW343	MW423: Port 1, Port 2, Port 3	

* MW68 and MW71 will be sampled under the Annual Environmental Surveillance sampling program, but will be sampled at the same time as these wells during the second quarter of the calendar year (CY).

Table C.12. C-400 Monitoring Wells Analytical Parameters

* As applicable, depth to water measurements cannot be obtained for multiport wells.

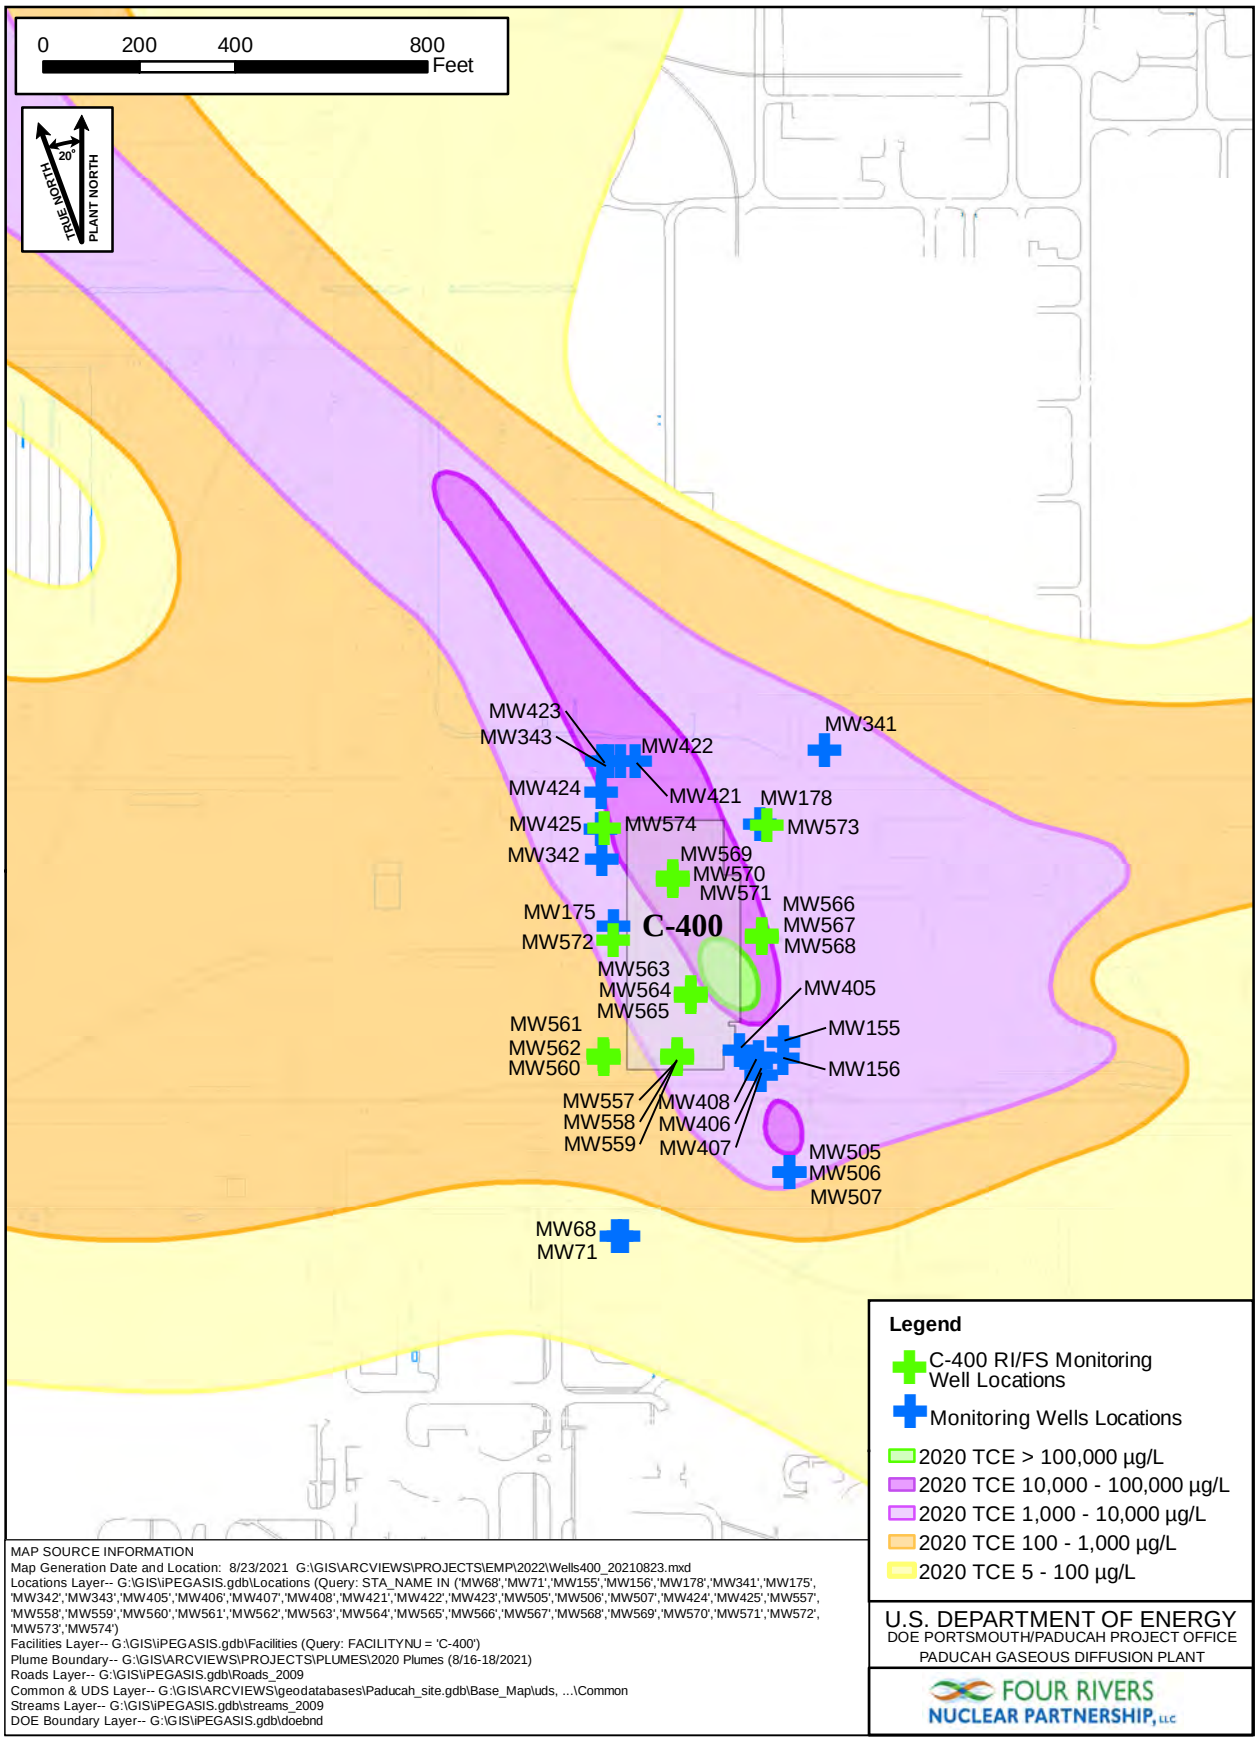

Figure C.6. C-400 Monitoring Wells with TCE Plume Shown

C.2.5 SWMU 1 MONITORING WELLS

SWMU 1 Wells

Frequency: Semiannually

Driver: The MWs are required to be sampled by the *Remedial Action Work Plan for In Situ Source Treatment by Deep Soil Mixing of the Southwest Groundwater Plume Volatile Organic Source at the C-747-C Oil Landfarm (Solid Waste Management Unit 1) at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-1287&D2, December 2013.

Reported: ASER

Rationale: To monitor the progress of contaminant reduction in the RGA groundwater following soil mixing.

Comments: Sampling frequencies and parameters were not modified for this sampling program for FY 2023.

Table C.13 provides a listing of MWs, and Table C.14 provides the analytical parameters. Locations are shown on Figure C.7.

Table C.13. SWMU 1 Wells

Figure C.7. SWMU 1 Monitoring Wells with TCE Plume Shown

C.2.6 WATER POLICY BOUNDARY MONITORING PROGRAM

Frequency: Quarterly and Annually

Driver: The *Action Memorandum for the Water Policy at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/OR/06-1201&D2, June 1994 stipulated the need to ensure that residential landowners were provided with water whose well water is contaminated by Paducah Gaseous Diffusion Plant (PGDP) sources. The Action Memorandum provided the sampling strategy only at the time the document was prepared and referred future sampling to the Sampling and Analysis Plan Addendum, which previously was superseded by the EMP.

Per the *Memorandum of Agreement for Resolution of Informal Dispute Concerning U.S. Environmental Protection Agency and Kentucky Department for Environmental Protection Requirements for Additional Actions or Modifications Regarding the CY 2018 Five-Year Review for Remedial Actions at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, *DOE/LX/07-2426&D2*, July 2020, the Operation and Maintenance Plans for the Northeast and Northwest Plumes were revised to incorporate elements of Water Policy boundary monitoring conducted under the EMP. The following are the revised plans.

- *Operation and Maintenance Plan for the Northeast Plume Containment System Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-2470&D1, November 2021

- *Operation and Maintenance Plan for the Northwest Plume Groundwater System Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-2469&D2, October 2021

Reported: Residential well data will be reported to the landowner and may be reported in the ASER. MW data for those MWs located on private property also will be reported to the landowner. Monitoring wells, regardless if located on private property or on DOE property, will be reported in the ASER.

Rationale: A group of residential wells and MWs were chosen to confirm plume migration paths of the Northwest and Northeast Plumes, near the boundaries of the Water Policy Box. Because of the predominant northern flow of groundwater from the site, the concentration of selected wells is more toward the west and east of the site, as opposed to south (see Tables C.15, C.16, and C.17).

Reviews of the data generated through this program may warrant changes to the Water Policy Box [see Figure C.8 (northwest wells) and Figure C.9 (northeast wells)].

Comments: The Water Policy Boundary Monitoring Program was introduced in FY 2013 under this format. Sampling of the residential wells and MWs stated below were previously a part of other programs contained in prior years' EMPs. In order to better capture the objectives stated above, this program was defined as a unique sampling program.

The Groundwater Strategy project is evaluating the extent of TCE and groundwater flow trends near the east and west boundaries of the Water Policy Box. Manual water level measurements and pressure transducer measurements in specific MWs will be used to measure the potentiometric surface and seasonal changes in the potentiometric surface.

MWs planned for pressure transducer deployment are included in Appendix B.

Tc-99 was removed from the list of sampling parameters for all wells under this program in FY 2019, except MW432, based on monitoring results and conceptual site models indicating that Tc-99 is not present at levels of concern in the areas of residential wells. However, based on the *Memorandum of Agreement for Resolution of Informal Dispute Concerning U.S. Environmental Protection Agency and Kentucky Department for Environmental Protection Requirements for Additional Actions or Modifications Regarding the CY 2018 Five-Year Review for Remedial Actions at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, *DOE/LX/07-2426&D2*, July 2020, and *Operation and Maintenance Plan for the Northwest Plume Groundwater System Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-2469&D2, October 2021, Tc-99 is analyzed for wells in the Northwest Plume portion of the Water Policy Box as noted in Table C.15, with the exception of those residential wells noted for TCE analysis only.

A Water Policy Box reduction evaluation report was submitted to DOE in 2021 with the recommendation to continue with the current Water Policy monitoring program.

As part of the Groundwater Strategy project and the Water Policy Box evaluation, residential wells along Bethel Church Road and Ogden Landing Road were evaluated to determine if they were able to be sampled. Residential wells that are accessible are sampled for TCE only.

In order for samples to be collected from the residential and monitoring wells in this program, license agreements have to be in place with the property owners.

In FY 2019, the analytical method for uranium isotopes was changed from alpha spectroscopy to inductively coupled plasma mass spectroscopy in order to obtain a lower detection limit.

In FY 2022, vinyl chloride was detected above the MCL in R40 samples collected by KDWM Agreement in Principle and DOE. Multiple sampling events were conducted at R40 in FY 2022 and the pump and tubing were replaced in the well. After the pump and tubing were replaced and additional samples were collected, vinyl chloride was not detected above the MCL. In order to continue evaluating conditions at the well, R40 will be sampled quarterly for TCE and degradation products in FY 2023.

Table C.15. Northwestern Wells

Quarterly (20)						
R2	R26	MW106A	MW194	MW202	MW432	MW441
R13	R53	MW134	MW199	MW426	MW433	MW452
R14	R245	MW146	MW201	MW427	MW435	
Quarterly (2)

[b] Analytical parameters for R40 only.
Bolded parameters are analyzed by different method than specified in header.

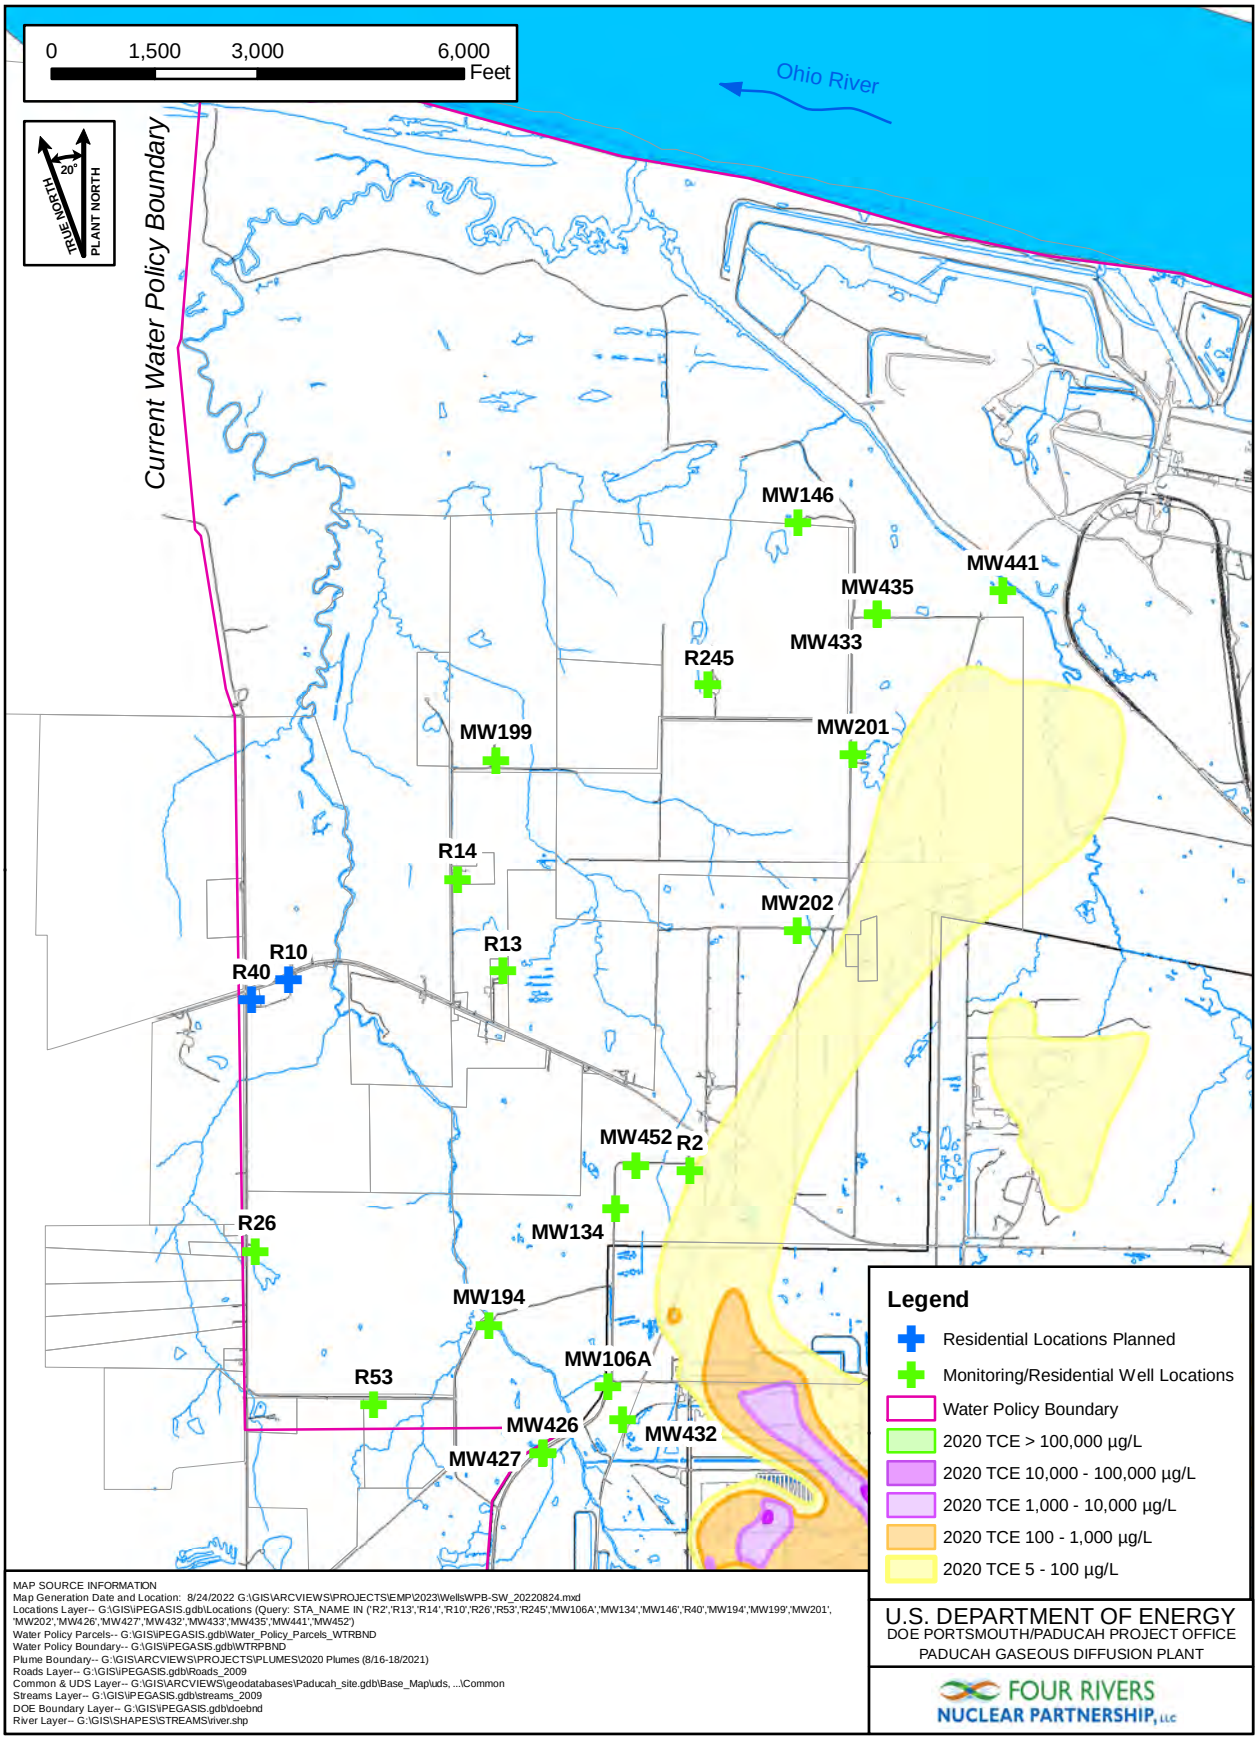

Figure C.8. Water Policy Boundary Monitoring Wells, Northwest with TCE Plume Shown

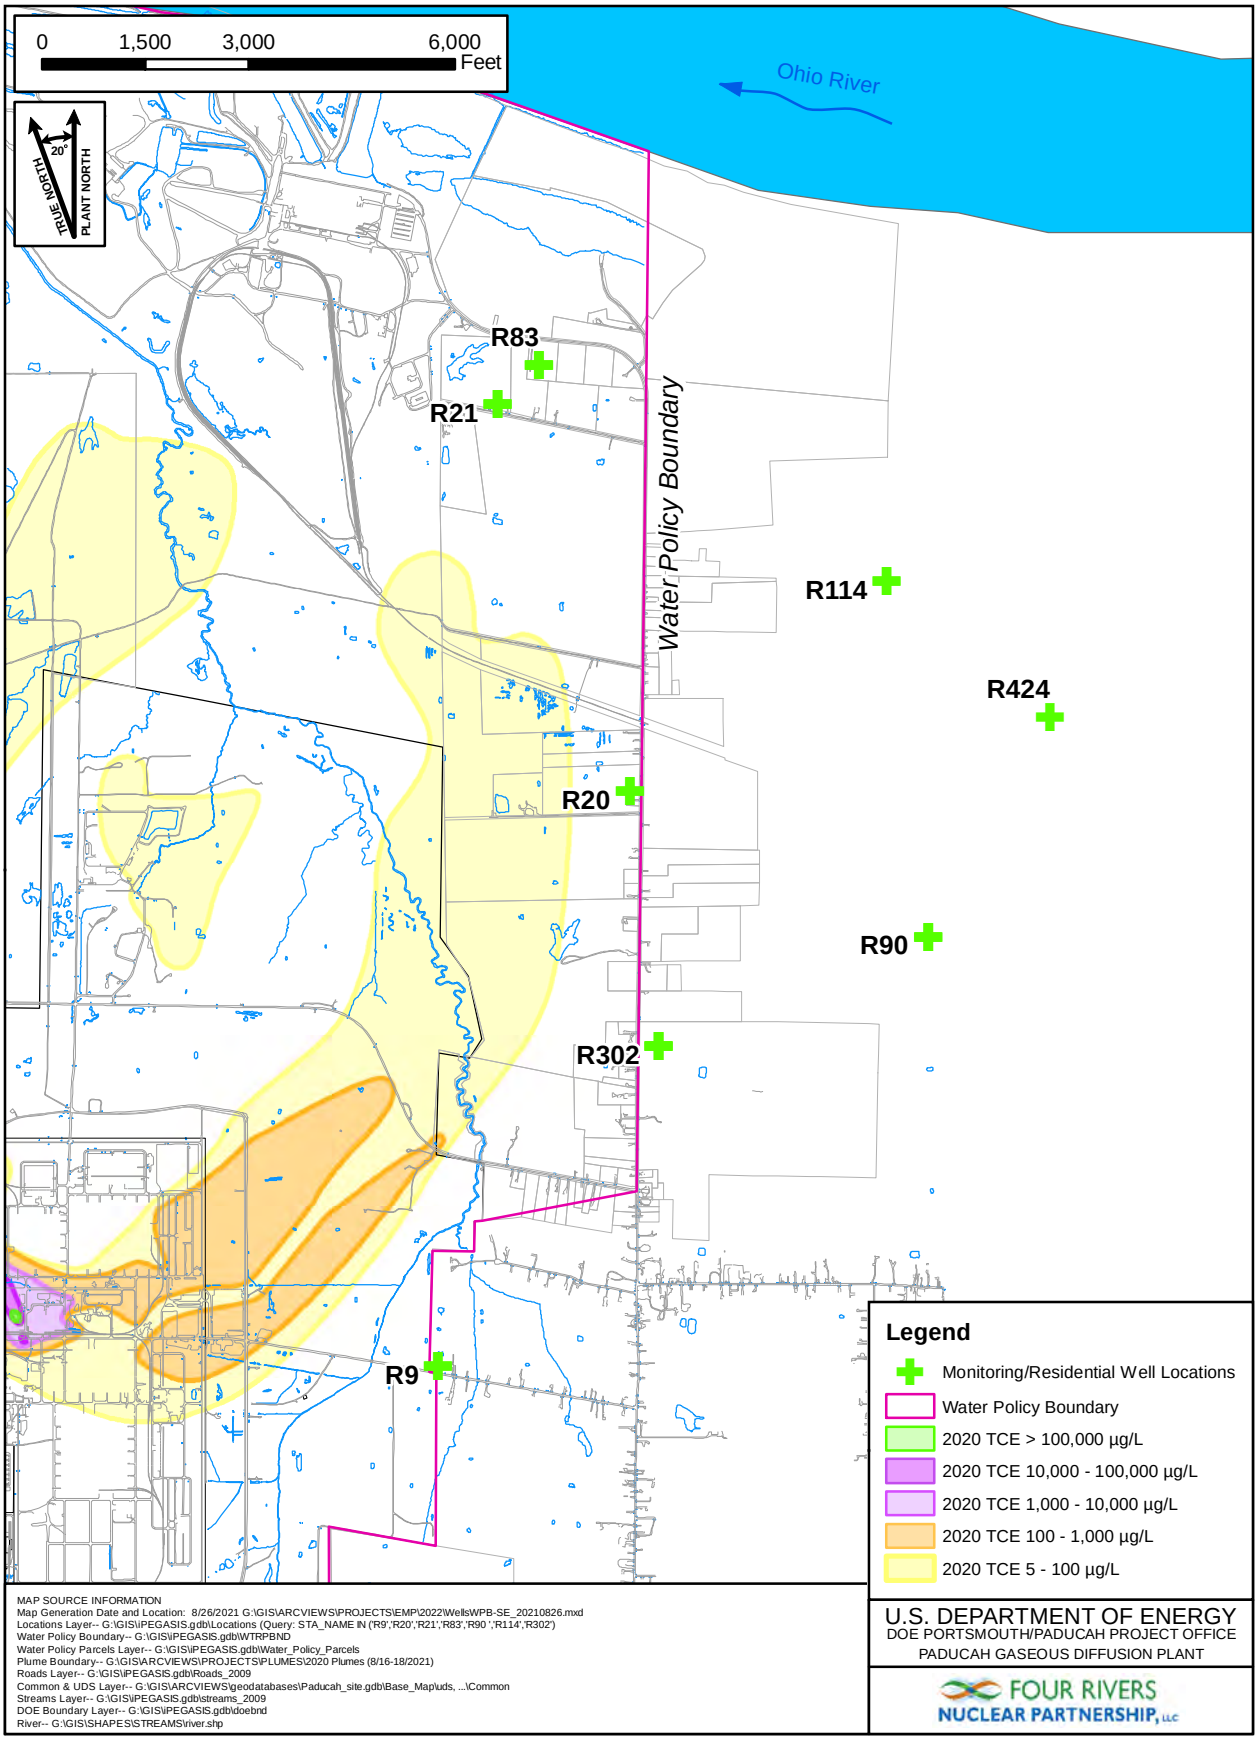

Figure C.9. Water Policy Boundary Monitoring Wells, Northeast with TCE Plume Shown

C.2.7 CARBON FILTER TREATMENT SYSTEM

Frequency: Semiannually (one before treatment sample and one after treatment sample per each semiannual event)

Driver: License agreement with landowner

Reported: Letter to landowner on a semiannual basis and the ASER

Comments: DOE is maintaining a treatment system for one landowner who is outside the Water Policy Box. A license agreement with the landowner stipulates the terms of this arrangement.

Sampling will be conducted for Tc-99 and TCE because they are contaminants of potential concern in groundwater from DOE activities. Based on reviews of the groundwater modeling and historical data, the groundwater at this location is not impacted by site operations. Based on these conditions, Tc-99 sampling frequency was reduced from monthly to semiannual to verify the Tc-99 is below reporting limits. A review of the FY 2021 Tc-99 data did not indicate a need for increased radionuclide analysis; therefore, no changes in sample strategy were made.

Tables C.18 and C.19 identify carbon filter treatment system well and carbon filter treatment system analytical parameters, respectively. Location is shown on Figure C.9.

Table C.18. Carbon Filtration System (1)

Miscellaneous—Method SM 9223		
Total Coliform		

*Field parameters will only be measured for Port 1 direct groundwater samples.

C.2.8 ENVIRONMENTAL SURVEILLANCE GROUNDWATER MONITORING PROGRAM

Environmental Surveillance Monitoring

Frequency: Biennially, Annually, Semiannually, and Quarterly

Driver: DOE Order 436.1 and the Paducah FFA

Reported: ASER

Rationale: Monitoring is conducted to determine the nature and extent of groundwater contamination and groundwater quality. Sampling of these MWs is conducted in support of the Paducah FFA Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Investigation; Resource Conservation and Recovery Act Facility Investigations (RFIs); and DOE Order 436.1.

Comments: The program was modified in FY 2011 to focus on sampling key MWs annually and reduce sampling of other MWs to a biennial basis. The biennial grouping of MWs was sampled in FY 2021; therefore, they will be sampled in FY 2023.

In support of groundwater modeling efforts at the site, McNairy MWs are sampled semiannually.

MW152 was abandoned in October 2018 in order for the Tennessee Valley Authority to construct a new process water basin. Another location has been selected for installation of a new well once construction activities have been completed. This new well will be MW583 and will be included in the annual sampling program once it has been installed.

The MWs to be monitored annually were selected based on their location within the plumes. Some MWs are key for early detection of plume migration; others are key for ongoing CERCLA decisions.

Per the *Memorandum of Agreement for Resolution of Informal Dispute Concerning U.S. Environmental Protection Agency and Kentucky Department for Environmental Protection Requirements for Additional Actions or Modifications Regarding the CY 2018 Five-Year Review for Remedial Actions at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, *DOE/LX/07-2426&D2*, July 2020, the *Operation and Maintenance Plan for the Northeast Plume Containment System Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-2470&D1, November 2021, was revised to incorporate elements of Water Policy boundary monitoring conducted under the EMP. MW100, MW150, MW409, MW410, MW411, MW473, MW474, MW475, and MW476 are sampled in support of the Environmental Surveillance program and also are sampled in support of Water Policy boundary monitoring.

Based on TCE and Tc-99 trends, the sampling frequency for MW549, MW550, and MW551 is being changed from biennial to semiannual, and the sampling frequency for MW169, MW477, MW491, and MW492 is being changed from biennial to annual. Based on data trends, PCB analyses are being removed from MW182, MW418, and MW419. Additionally, in support of assessing the impact of potential faulting in the McNairy Formation at the site, MW346 and MW347 are being added to the annual sampling program.

Tables C.20 and C.21 identify MWs and analytical parameters, respectively. Locations are shown on Figure C.10.

Table C.20. Surveillance Wells (132)

Biennial (73)

Quarterly (3)					
MW354	MW403: Port 3	MW431[d]			

[a] Sampling will occur at the same time as the second quarter CY sampling event for MW505, MW506, and MW507, which are under the C-400 MW sampling program.
[b] SWMU 4 MWs.
[c] These three wells will be sampled for TCE only to evaluate Northeast Plume migration. These wells previously were included in the Northeast Plume monitoring section as being sampled semiannually for TCE only.
[d] These wells will not be sampled for Tc-99 based on a recommendation in the Technical Memorandum provided to DOE by EarthCon, Consultants, Inc.
[e] If these McNairy MWs produce enough water for sampling, samples will be collected for volatiles, Tc-99, and uranium as a metal.
[f] These MWs also are sampled in support of Water Policy boundary monitoring.
[g] MWs located on private property or Kentucky Department of Fish and Wildlife Resources property.

[a] Uranium analysis is only required on the eight McNairy MWs sampled semiannually as noted in Table C.20.
[b] Xylenes

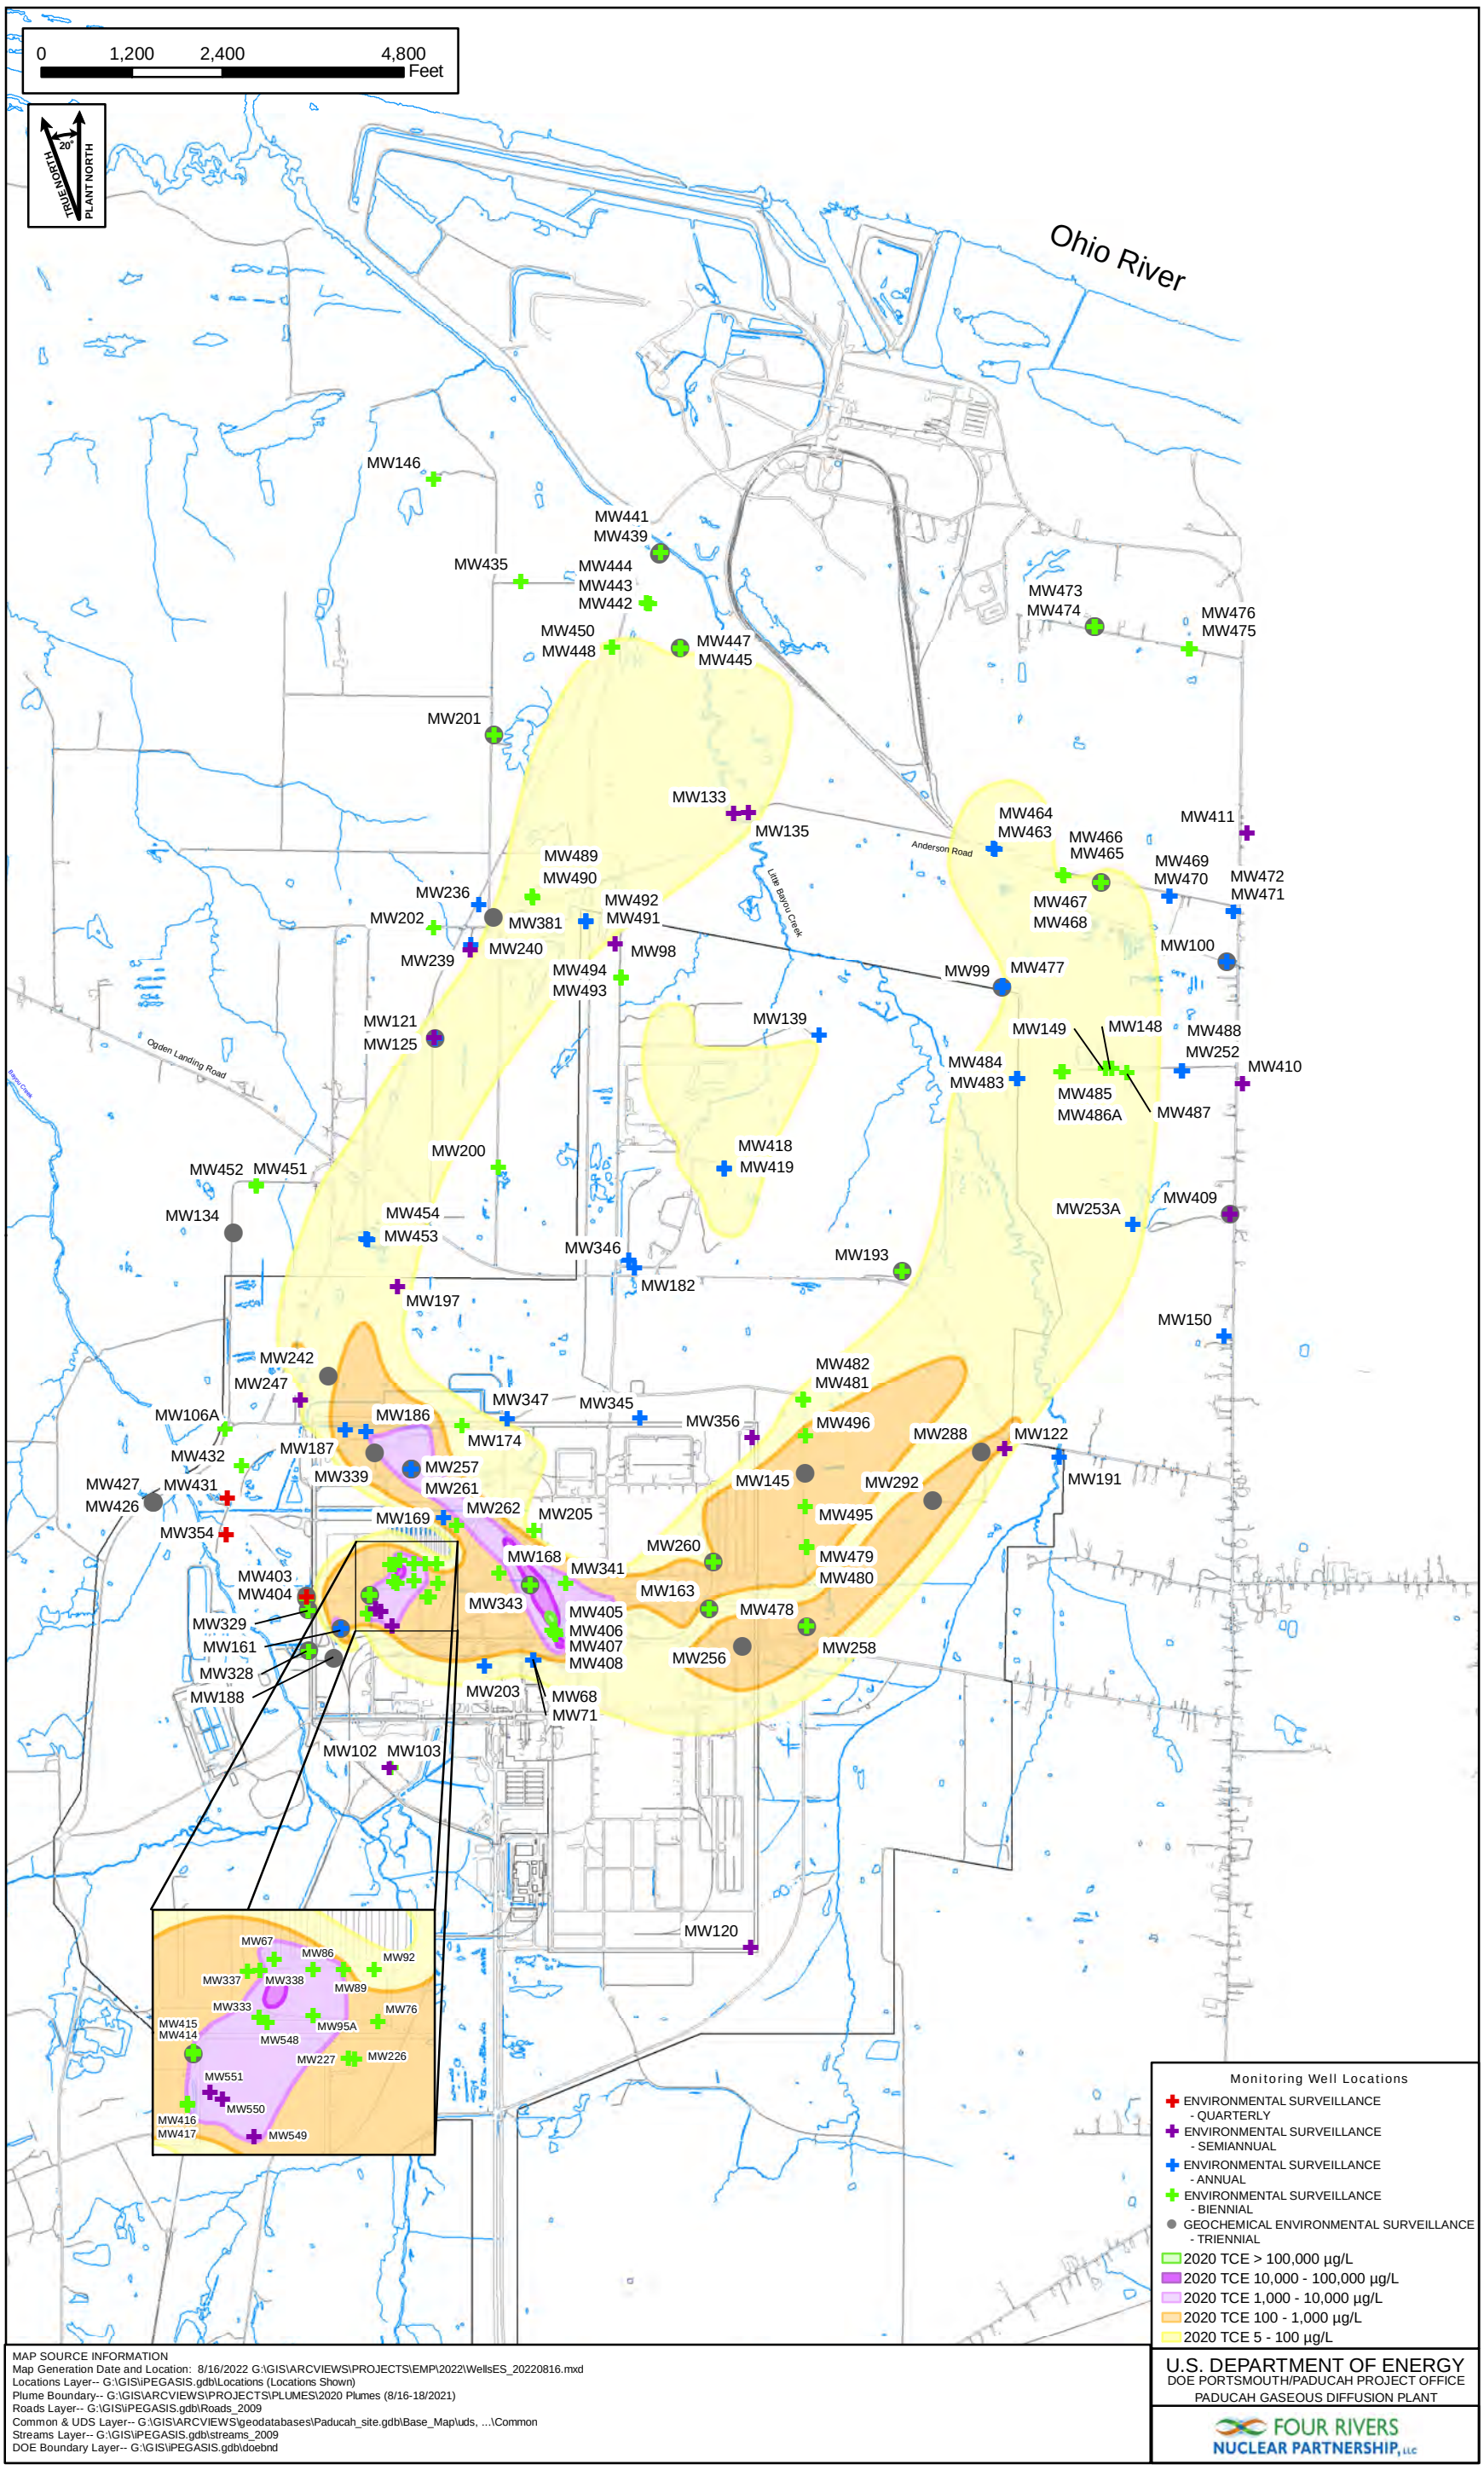

Figure C.10. Environmental Surveillance Groundwater Monitoring Wells with TCE Plume Shown

THIS PAGE INTENTIONALLY LEFT BLANK

Geochemical Environmental Surveillance Monitoring

Frequency: Triennially

Driver: DOE Order 436.1 and the Paducah FFA

Reported: ASER

Rationale: Monitor the extent of groundwater contamination and groundwater quality. Sampling of these MWs is conducted in support of the Paducah FFA CERCLA Investigation, RFIs, and DOE Order 436.1.

Comments: The program was modified in FY 2011 to reduce sampling from an annual basis to a triennial basis. The MWs were sampled in FY 2022; therefore, they will not be sampled in FY 2023.

MW152 was abandoned in October 2018 in order for the Tennessee Valley Authority to construct a new process water basin. Another location has been selected for installation of a new well once construction activities have been completed. This new well will be MW583 and will be included in this sampling program once it has been installed.

Tables C.22 and C.23 show MWs and analytical parameters, respectively. Locations are shown on Figure C.10.

C.3. SURFACE WATER, SEDIMENT, AND WATERSHED BIOLOGICAL MONITORING

C.3.1 EFFLUENT WATERSHED MONITORING PROGRAM

C-746-S, C-746-T, and C-746-U Landfills Surface Water

Frequency: Quarterly

Driver: Solid Waste Landfill Permit SW07300014, SW07300015, SW07300045, Technical Attachment 24, which includes the surface water monitoring plans.

Reported: Quarterly C-746-S&T and C-746-U Landfills Compliance Monitoring Reports and the ASER

Rationale: Monitor rain runoff from the C-746-S, C-746-T, and C-746-U Landfills.

Comments: Sampling frequencies and sampling parameters were not modified for this sampling program for FY 2023 because it is permit driven.

Surface water sampling is performed and reported collectively for the C-746-S and C-746-T Landfills.

Tables C.24 and C.25 show landfill surface water locations and landfill surface water parameters, respectively. Locations are shown on Figure C.11.

Table C.24. Landfill Surface Water Locations (6)

C-746-S&T		
L135	L136	L154*
C-746-U

Figure C.11. Landfill Surface Water Locations

Kentucky Pollutant Discharge Elimination System Outfall Sampling

Frequency: Weekly, Monthly, and Quarterly

Driver: KPDES permit for PGDP, permit number KY0004049, was issued by the Kentucky Division of Water (KDOW) to DOE, Fluor Federal Services, Inc., Paducah Deactivation Project (FPDP), and Mid-America Conversion Services, LLC, and became effective September 1, 2017. A permit dated October 12, 2017, changed the co-permittee from FPDP to FRNP. This permit expired on August 30, 2022, but was administratively continued while KDOW processed the KPDES permit renewal application. KDOW issued the new KPDES permit in December 2022, and the new permit became effective on February 1, 2023. The current permit expires on January 31, 2028.

Reported: Monthly and Quarterly Discharge Monitoring Reports; weekly sampling is reported in the monthly reports and ASER

Rationale: Monitor effluent and surface water runoff as it is discharged to the receiving streams and tributaries.

Comments: Table C.26 shows the KPDES outfall sampling locations, frequency of sampling, and parameters required by permit KY0004049. Locations are shown on Figure C.12.

CERCLA Outfall Sampling

Frequency: Weekly and Quarterly

Driver: Sampling of this outfall is required by the *Operation and Maintenance Plan for the Northeast Plume Containment System Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-2470&D1, November 2021, and the *Remedial Action Work Plan for the Optimization of the Northeast Plume Interim Remedial Action at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/LX/07-1280&D2/R3/A1, July 2018.

Reported: Semiannual FFA Progress Report and ASER

Rationale: Monitor effluent from the Northeast Plume containment system.

Comments: Table C.27 shows the frequency of sampling and parameters required for this CERCLA outfall (C001).

Sampling frequencies and sampling parameters were not modified for this sampling program for FY 2023.

[a] K019 is sampled when the C-746-U Landfill sedimentation pond is discharged through the outfall.
[b] Per the KPDES permit, flow is measured from grab samples collected at K004. Pursuant to the Water Treatment Registration, PWS No. 0732457, for sewage discharge in operating a sewage treatment plant, monthly flow information is documented by the Utilities organization and is reported to KDOW.
[c] Monitoring for this analysis added with KPDES Permit KY0004049, effective date February 1, 2023.
[d] Acute toxicity sampling requires two discrete grab samples collected approximately 12 hours apart. A different lab method is used for each species.
[e] Chronic toxicity sampling requires three 24-hour composite samples. Monitoring for K010 is not required when the effluent from the C-617 Lagoon is discharged through K011. A different lab method is used for each species.
[f] Monitoring for K011 is required only when the effluent from the C-617 Lagoon is discharged through the outfall.

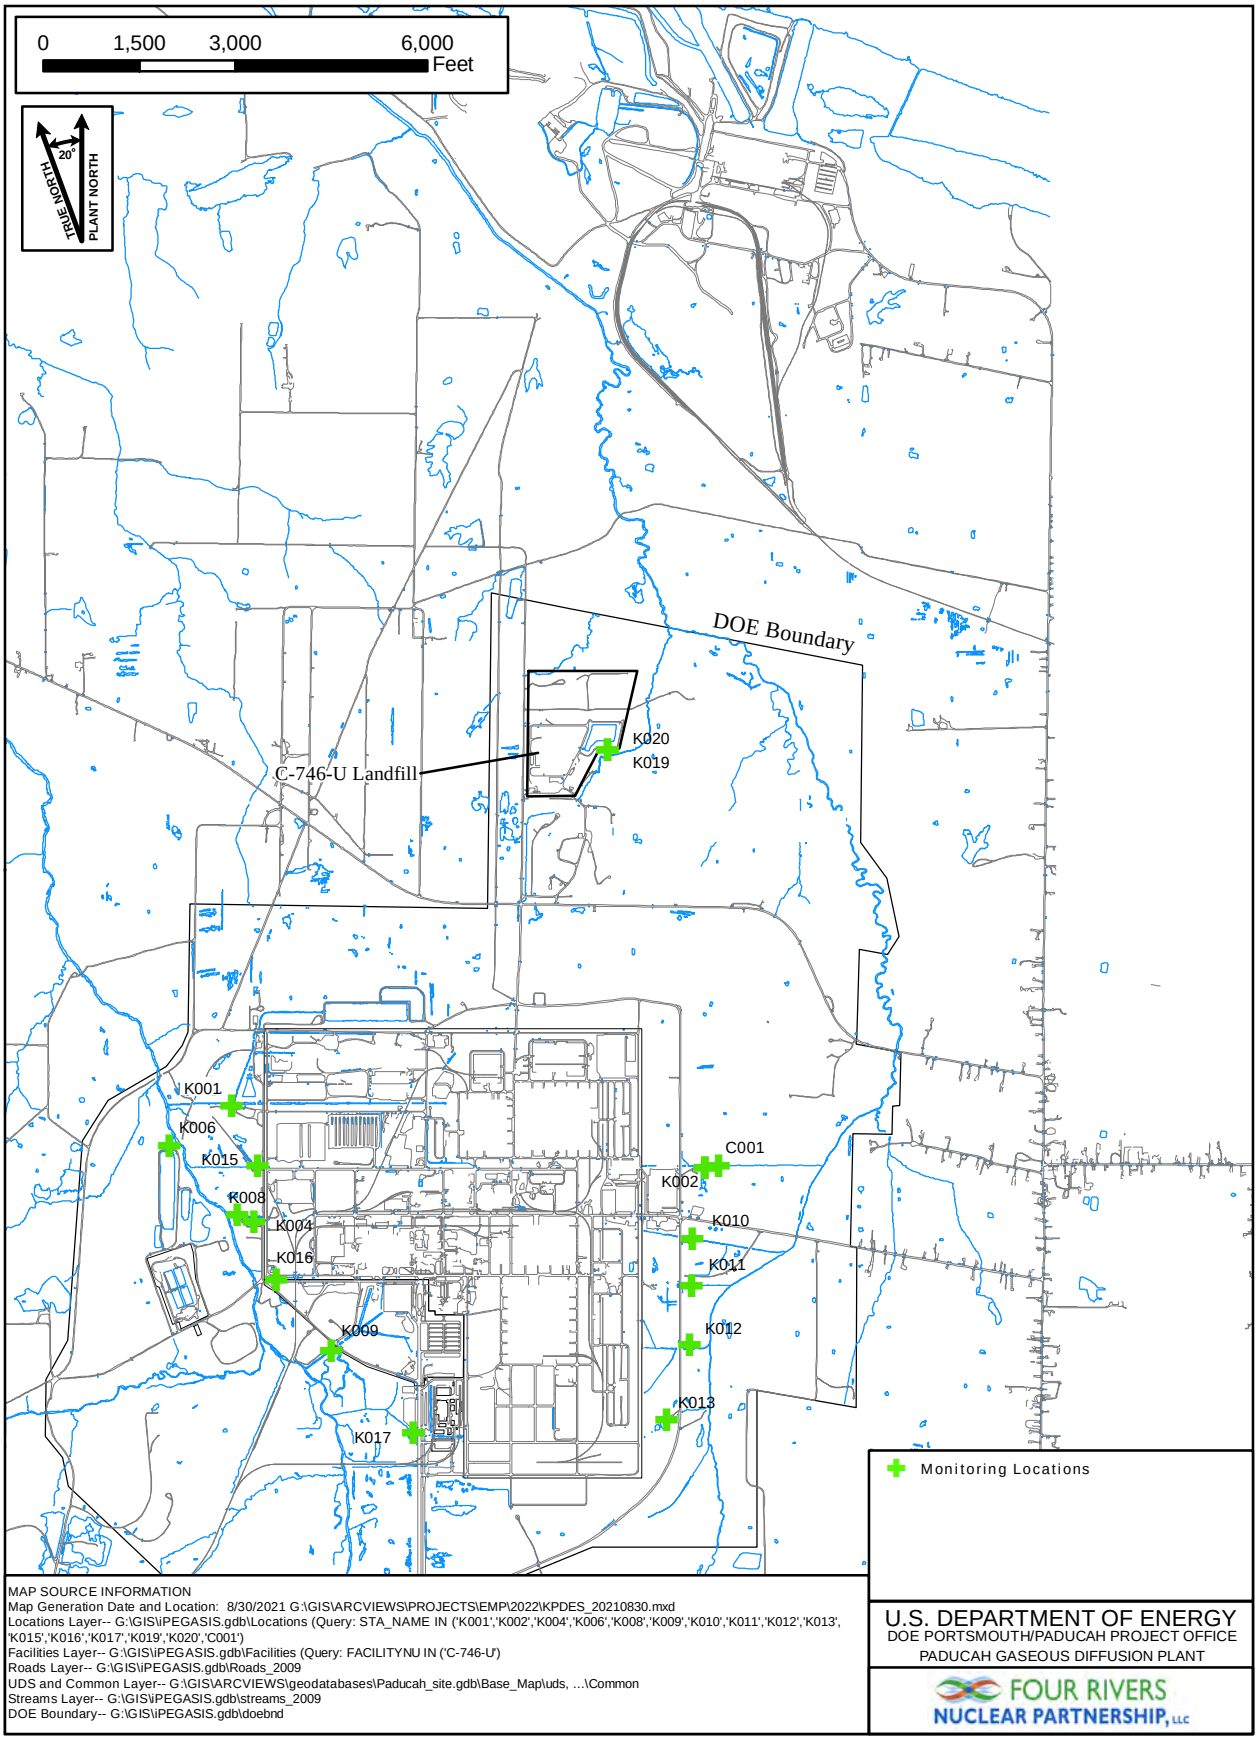

Figure C.12. KPDES and CERCLA Outfall Sampling Locations

Table C.27. C001 Outfall Sampling Frequency and Parameters

Analysis-Method	Frequency of Sampling at C001 Outfall W—Weekly; Q—Quarterly
	C001
Flow (Mgd)—Field	W

[a] Chronic toxicity sampling requires three 24-hour composite samples. A different lab procedure is used for each species.
[b] Technetium-99 is required under the Remedial Action Work Plan for the Northeast Plume.

C.3.2 ENVIRONMENTAL RADIATION PROTECTION PROGRAM—EFFLUENT AND SURFACE WATER RUNOFF

Frequency: Monthly

Driver: DOE Order 458.1

Reported: ASER

Rationale: Monitor effluent and surface water runoff for radiological constituents as it is discharged to the receiving streams and tributaries.

Comments: DOE Order 458.1 was implemented during FY 2013 with the effective date being January 2, 2013. DOE Order 458.1 requires compliance in accordance with DOE-STD-1196-2021, *Derived Concentration Technical Standard*. DOE Order 458.1 also requires that settleable solids on liquid discharges do not exceed limits set forth in DOE Order 458.1, Attachment 1 2.g.(4). Settleable solids are analyzed for the Environmental Radiation Protection Program (ERPP) outfall locations, with the exception of Outfall 020. Parameters required to determine alpha and beta activity on settleable solids per Section 6.10.7 of DOE-HDBK-1216-2015 are noted in Table C.28. These results will be compared to the sediment background data to evaluate if the radionuclide concentration exceeds the standard. At the completion of FY 2023, further evaluations of total suspended solids (TSS) in relation to the alpha and beta activity of the settleable solids will be performed in order to determine a TSS value that can be used to demonstrate compliance to DOE Order 458.1 for the overall presence of total solids in the effluent.

Table C.28 lists the sampling locations, frequencies, and parameters. Locations are shown on Figure C.13.

Table C.28. ERPP Effluent and Surface Water Runoff

Analysis—Method	Analytical Parameters M—Monthly

Uranium-238 (pCi/L)—U-02-RC M	M	M	M	M	M	M	M	M	M	M	M	M	M	M

NOTE: Samples are being collected from locations near the outfalls listed in KPDES permit KY0004049.

*Results are used to determine the alpha and beta activity on settleable solids per Section 6.10.7 of DOE-HDBK-1216-2015. The alpha and beta activity on settleable solids will be calculated by the EM project.

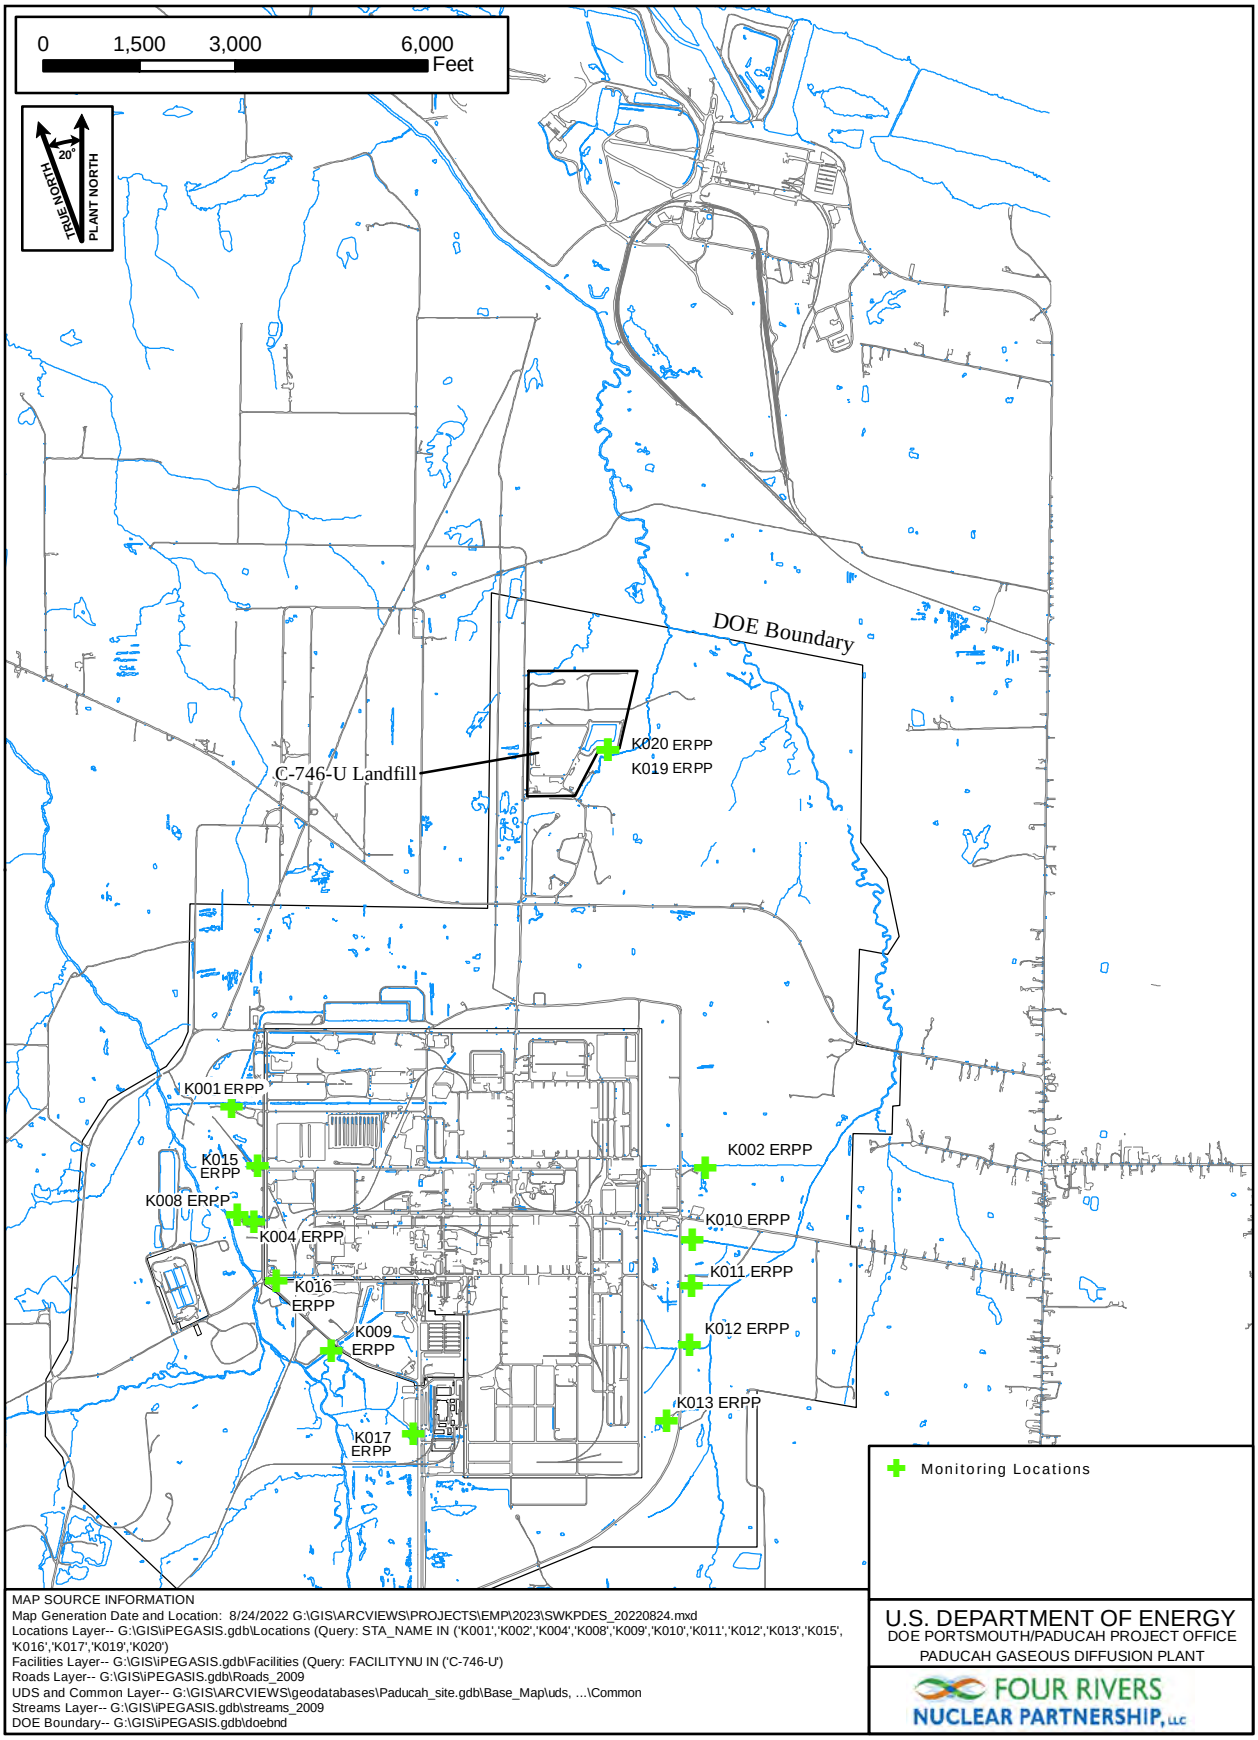

Figure C.13. Surface Water Monitoring near KPDES Outfalls

C.3.3 C-613 NORTHWEST STORM WATER CONTROL FACILITY

C-613 Sediment Basin—Storm Water

Frequency: Quarterly

Driver: Quarterly sampling is required by the *Operation and Maintenance Plan for the Northwest Storm Water Control Facility at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/OR/07-2044&D1/R4, September 2009.

Reported: Reported to KDWM via electronic mail.

Rationale: Prior to a discharge event, the pH and TSS is measured to prevent a discharge that would cause the effluent monitored at KPDES Outfall 001 to exceed regulatory limits. Operational monitoring is not covered under the EM Program but is managed by the operations manager or designee. As specified in the Operation and Maintenance Plan, a sample is to be collected each quarter to confirm the pH and TSS field measurements.

Comments: Table C.29 provides a listing of the analytical parameters. Location of the C-613 Sediment Basin is shown on Figure C.14.

Sampling frequencies and sampling parameters were not modified for this sampling program for FY 2023.

Figure C.14. C-613 Sediment Basin

C.3.4 ENVIRONMENTAL SURVEILLANCE WATERSHED MONITORING PROGRAM

Surface Water Monitoring

Frequency: Quarterly and Annually

Driver: *Record of Decision for Waste Area Groups 1 and 7 for the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, DOE/OR/06-1470&D2, September 1997, requires monitoring of surface water locations near the C-746-K Landfill. DOE Order 458.1 requires radiological monitoring.

Reported: ASER

Rationale: To monitor potential contamination released into Bayou Creek and Little Bayou Creek surface water from plant operations.

Comments: DOE Order 458.1 requires that environmental surveillance be performed in accordance with DOE-HDBK-1216-2015. Sampling locations were selected to determine site-specific radiation exposure pathway analysis. Locations were prioritized for areas of public access, introduction of plant effluents to the environment and verification of the effectiveness of PGDP effluent monitoring.

Background location L1 was chosen to support data comparisons of data generated as part of this program, as well as the ERPP Effluent and Surface Water Runoff program outlined in Section C.3.2.

Settleable solids are analyzed for the background and public water sources locations. Parameters required to determine alpha and beta activity on settleable solids per Section 6.10.7 of DOE-HDBK-1216-2015 are noted in Table C.36. These results will be compared to the sediment background data to evaluate if the radionuclide concentration exceeds the standard. At the completion of FY 2023, further evaluations of TSS in relation to the alpha and beta activity of the settleable solids will be performed in order to determine a TSS value that can be used to demonstrate compliance to DOE Order 458.1 for the overall presence of total solids in the effluent.

The previous KPDES permit required that 19 in-stream surface water locations be sampled quarterly for PCBs and TCE. The current KPDES permit, permit number KY0004049, does not require this sampling; therefore this sampling program was modified in FY 2018 to include only locations near C-746-K Landfill (C746K-5 and K746KTB1A) and a seep location (LBCSP5) in Little Bayou Creek. The sampling of surface water near the C-746-K Landfill meets the requirements of the ROD listed above and will be analyzed for volatiles and metals. The seep location will be monitored for TCE and is being sampled for continued evaluation of trends in groundwater upwelling at this location. The surface water monitoring program will be evaluated for FY 2022 to determine if any changes are needed. L14 was added to the quarterly ERPP sampling program in FY 2018 to include monitoring upstream of the C-746-S&T and C-746-U Landfills. During sampling in FY 2018, it was determined that the sample should be collected downstream of L14 in order to obtain enough flow to collect a sample. The location is L14DWN.

In support of the Groundwater Strategy project, quarterly walkdowns of a portion of Little Bayou Creek will be performed. If any new seeps are found, samples will be collected and analyzed for TCE only.

Table C.30 details the surface water and seep sampling locations. Tables C.31 and C.32 detail the surface water and seep sampling analytical parameters. Tables C.33 through C.36 detail the surface water and seep sampling analytical parameters by location for the ERPP. Sampling to support the ERPP will be conducted on a quarterly basis, with the exception of the background locations (L1 and L30), which will be sampled annually. Locations are shown on Figure C.15.

Bolded parameters are analyzed by different method than specified in header.

Figure C.15. Surface Water and Seep Monitoring Locations

Sediment Monitoring

Frequency: Semiannually (PCBs) and Annually (Radionuclides)

Driver: Acquisition of PCB data for future "Impaired Waters of Kentucky" discussions. DOE Order 458.1 requires radiological monitoring. This radiological monitoring will be conducted on an annual basis.

Reported: ASER

Rationale: Monitor potential contamination released into Bayou Creek and Little Bayou Creek sediments from historical plant operations.

Comments: DOE Order 458.1 requires that environmental surveillance of sediment be performed in accordance with DOE-HDBK-1216-2015. Sampling locations were selected to determine site-specific radiation exposure pathway analysis and to provide an indication of the accumulation of undissolved radionuclides in the aquatic environment. Locations were prioritized for areas of public access, introduction of plant effluents to the environment, and verification of the effectiveness of the Paducah Site effluent monitoring. Sampling for radionuclides will occur annually.

During FY 2022, the background sediment location along Massac Creek, S28, was no longer safely accessible due to road construction and design changes to the highway that provided access for sampling. A new background location, S29, was established along Massac Creek to replace S28.

Table C.37 details sediment sampling locations and parameters. Table C.38 details the sediment sampling locations and parameters driven by the ERPP. The previous KPDES permit required that 14 locations be sampled semiannually for PCBs. The new KPDES permit, permit number KY0004049, no longer requires this sampling; however, these locations will continue to be sampled semiannually for PCBs in FY 2023 in order to evaluate action levels for PCBs in sediment. Locations are shown on Figure C.16.

C.4. LANDFILL LEACHATE SAMPLING

C-746-S and C-746-U Landfills Leachate Monitoring

Frequency: Annually

Driver: Solid Waste Landfill Permit SW07300014, SW07300015, SW07300045, issued by KDWM.

Reported: Quarterly Compliance Operating Reports, as required by the applicable solid waste landfill permit and the ASER

Rationale: Solid Waste Landfill Permit SW07300014, SW07300015, SW07300045.

Comments: Leachate sampling is performed and reported collectively for the C-746-S Landfill.

Sampling frequencies and sampling parameters were not modified for this sampling program in FY 2023 because it is permit driven.

Annual leachate parameters for C-746-S and C-746-U Landfills are presented in Table C.39.

Table C.39. C-746-S and C-746-U Landfills Annual Leachate Parameters

[a] Cesium is not required by the Hazardous Waste Management Facility Permit, but is requested per management decision.
[b] PCBs are not required by the Hazardous Waste Management Facility Permit for disposal purposes.
Bolded parameters are analyzed by different method than specified in header.

C.5. EXTERNAL GAMMA AND NEUTRON RADIOLOGICAL MONITORING

Frequency: Collected continuously and analyzed quarterly; external gamma dosimeters at 64 monitoring locations and neutron dosimeters at 7 monitoring locations are changed quarterly for external radiation monitoring.

Driver: DOE Order 436.1 and DOE Order 458.1

Reported: ASER

Rationale: Monitor the effective dose from site operations in order to ensure operational limits are not exceeded.

Comments: Table C.41 provides a listing of thermoluminescent dosimeters (TLDs). Figure C.17 shows TLD monitoring locations. Background TLD monitoring locations, TLD-54 and TLD-85, were removed from the surveillance network in January 2022 due to the inability to access the properties where the TLDs were located. An evaluation was performed, and it was determined that these TLDs would not be replaced with new background TLDs.

Table C.41. Thermoluminescent Dosimeters (64)

TLD-1	TLD-19	TLD-59	TLD-72	TLD-86
TLD-2	TLD-22	TLD-60	TLD-73	TLD-87
TLD-3	TLD-25	TLD-61	TLD-74	TLD-88
TLD-4	TLD-30	TLD-62	TLD-75	TLD-89
TLD-5	TLD-35	TLD-63	TLD-76	TLD-90
TLD-6	TLD-37	TLD-64	TLD-77	TLD-91
TLD-7	TLD-38	TLD-65	TLD-78	TLD-92

C.6. AMBIENT AIR MONITORING

Frequency: Weekly and Quarterly

Driver: *National Emission Standards for Hazardous Air Pollutants Management Plan for Emission of Radionuclides for the U.S. Department of Energy Operations at the Paducah Site, Paducah, Kentucky*, CP2-EC-0002, October 2019

Reported: NESHAP Annual Report and ASER

Rationale: Monitor radionuclide emissions from Paducah Site activities.

Comments: Ambient air is monitored to verify the concentrations of radionuclides from all sources, including fugitive and diffuse. The ambient air monitoring network is comprised of nine air monitoring stations surrounding the site, including one background location.

Sampling frequencies and sampling parameters were not modified for this sampling program for FY 2023.

Location identifications are found in Table C.42. Filter samples are collected on a weekly basis and analyzed for gross alpha and beta, as shown in Table C.43. The laboratory retains the filter and compiles all of the weekly samples for each quarterly period. At the end of each quarter, the filters are compiled and analyzed for the isotopes defined in the quarterly analysis table, C.44. Locations are shown on Figure C.18.

Table C.42. Ambient Air Monitoring Locations (9)

AMDBCP (BG)	AMD002	AMD612
AMD57	AMDNE	AMD746S
AMD012	AMD015	AMD746U

BG = Background location

INTRODUCTION

The Environmental Monitoring (EM) Quality Assurance Project Plan (QAPP) has been prepared by Four Rivers Nuclear Partnership, LLC, (FRNP) based on the updated programmatic QAPP, DOE/LX/07-2459&D1, *Paducah Gaseous Diffusion Plant Programmatic Quality Assurance Project Plan*, March 2022, which was developed in alignment with the *Uniform Federal Policy for Quality Assurance Project Plans* (UFP-QAPP Manual) guidelines for QAPPs, March 2005, as updated by the *Optimized UFP-QAPP Worksheets* guidance, March 2012.

This EM QAPP is Appendix D to the *Environmental Monitoring Plan Fiscal Year 2023 Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, CP2-ES-0006/FR9. It describes the project-specific quality assurance (QA) activities that will be conducted to support ongoing monitoring programs of varying media (e.g., groundwater, surface water, air, and sediment) at the site.

This EM QAPP does the following:

- Refers to the standard operating procedures (SOPs) already developed for the site and in place;
- Identifies analytical limits, units of reporting, and methods requested by each program; these values will be used to procure laboratory services. If the laboratory cannot meet the limits, units, or methods specified in the QAPP, the project manager (PM) and/or compliance organization will be contacted so a determination can be made if the proposed conditions are acceptable to meet current project objectives. If the conditions are found to be acceptable, the Sample Management Office (SMO) will document the acceptance with rationale;
- Identifies analytical limits and methods that may be required by a given project [e.g., permits, maximum contaminant level (MCL), etc.];
- Incorporates the *Paducah Gaseous Diffusion Plant Data Management Plan*, DOE/LX/07-2458&D2; and
- Standardizes data validation processes by linking the process to SOPs (see Worksheet #21).

This document supports the EM procedures *Quality Assured Data*, CP3-ES-5003; *Environmental Monitoring Data Management Plan*, CP2-ES-0063; and *Developing, Implementing, and Maintaining Data Management Implementation Plans*, CP3-ES-1003.

This QAPP focuses on providing fixed laboratory methods, although Appendix C of the Environmental Monitoring Plan (EMP) identifies field measurements requested on each of the programs. Field methods [e.g., X-ray fluorescence, colorimetric methods for polychlorinated biphenyls (PCBs), and radionuclide surveys] that may be implemented in support of the programs within this EMP are not covered in either of the discussion of the EMP or within this QAPP.[1]

This QAPP does not cover the analysis of the thermoluminescent dosimeters (TLDs) for gamma emissions although the program is detailed with sample locations in Appendix C of the EMP. Those analyses are conducted utilizing quality standards set forth and evaluated by the Health, Safety, Support, and Quality

[1] Project-specific QAPPs contain information concerning implemented field methods.

(HSS&Q) organization. Additionally, samples collected in the ambient air monitoring program are not covered in this QAPP. While the ambient air program, like the TLD environmental monitoring program, is important for overall evaluation of site operations, it is not considered to fit the typical QAPP guidelines and should not be forced into the parameter listing within the QAPP on the sole reason that they are included in Appendix C of the EMP.

Worksheets #10 and #17 are not included in this QAPP. Based on the programmatic QAPP, completion of these worksheets in project-specific QAPPs is at the discretion of the project. Considering the information is already included in the body of the EMP, the decision was made to not include these worksheets in this QAPP.

Worksheets #12 and #15 were adapted from the programmatic QAPP. Only those worksheets containing parameters required under the EMP and identified in the *Methods for Conducting Risk Assessments and Risk Evaluations at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky, Volume 1. Human Health*, DOE/LX/07-0107&D2/R13/V1 (herein known as RMD) as contaminants of concern (COCs) at the site were included in this QAPP.

This QAPP provides limited information on some analyses considered as miscellaneous tests. Miscellaneous tests are defined in Worksheet #23. Samples for these analyses are collected using SOPs employed by the sampling staff and quality assurance standards specified in procedures such as CP3-ES-5003, *Quality Assured Data*. They are not listed in Worksheets #12 and #15 because they are not considered COCs at the site. These parameters are requested by programs within Appendix C of the EMP because they are indicators of overall water quality or, in some instances, are required as conditions of permits (e.g., toxicity, ferrous iron, and coliform).

A screening assessment that includes additional per- and polyfluoroalkyl substances (PFAS) data is needed to perform an initial sitewide evaluation for the presence of PFAS in environmental media and drinking water[2] at the Paducah Site. Appendix E contains supplemental PFAS QAPP worksheets related to this screening assessment. Appendix E, Attachment E-2 contains sampling locations that will be included in the screening assessment. Sampling locations include a subset of monitoring wells (MWs) from all groundwater monitoring programs included in this fiscal year (FY) 2023 EMP, Kentucky Pollutant Discharge Elimination System (KPDES) outfalls, and landfill leachate.

[2] For the purposes of the PFAS sampling described herein, "drinking water" refers to potable water from the site water treatment plant (C-611) and does not include bottled drinking water provided by an off-site vendor and available to site personnel.

QAPP Worksheets #1 and #2. Title and Approval Page

Site Name/Project Name: Paducah Gaseous Diffusion Plant/Environmental Monitoring
Site Location: Paducah, Kentucky
Site Number/Code: KY8890008982
Contractor Name: FRNP
Contractor Number: Contract No. DE-EM0004895
Contract Title: Paducah Gaseous Diffusion Plant Paducah Deactivation and Remediation Project
Work Assignment Number: Not Applicable (N/A)

Document Title: *Environmental Monitoring Quality Assurance Project Plan*

Lead Organization: U.S. Department of Energy (DOE)

Preparer's Name and Organizational Affiliation: Valarie Crabtree, Four Rivers Nuclear Partnership, LLC

QAPP Worksheets #1 and #2. Title and Approval Page (Continued)

1. Identify guidance used to prepare QAPP:

   Intergovernmental Data Quality Task Force, March 2005. *The Uniform Federal Policy for Implementing Environmental Quality Systems*, Version 2.0, 126 pages.

   Intergovernmental Data Quality Task Force, March 2005. *The Uniform Federal Policy for Quality Assurance Project Plans*: *Part 1 UFP-QAPP Manual*, Version 1.0, 177 pages (DTIC ADA 427785 or EPA-505-B-04-900A).

   Intergovernmental Data Quality Task Force, March 2005. *The Uniform Federal Policy for Quality Assurance Project Plans*: *Part 2A UFP-QAPP Workbook*, Version 1.0, 44 pages.

   Intergovernmental Data Quality Task Force, March 2005. *The Uniform Federal Policy for Quality Assurance Project Plans: Part 2B, Quality Assurance/Quality Control Compendium: Minimum QA/QC Activities*, Version 1.0, 76 pages.

   Intergovernmental Data Quality Task Force, March 2012. *Uniform Federal Policy for Quality Assurance Project Plans, Optimized UFP-QAPP Worksheets*, 42 pages.

   Methods for Conducting Risk Assessments and Risk Evaluations at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky, *Volume 1 Human Health*, DOE/LX/07-0107&D2/R13/V1.

   Paducah Gaseous Diffusion Plant Programmatic Quality Assurance Project Plan, DOE/LX/07-2479&D1.

2. Identify regulatory program: The EMP is not submitted to regulatory agencies for review or approval; however, many of the sampling programs defined within the EMP are required by regulatory decision documents, permits or DOE Orders (O); therefore, those regulatory programs are pertinent. They include the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA); *Federal Facility Agreement for the Paducah Gaseous Diffusion Plant*, DOE/OR/07-1707; Kentucky Department for Environmental Protection (KDEP) (Kentucky Division of Waste Management, Kentucky Division of Water); and DOE Orders.

3. Identify approval entity: DOE

4. Indicate whether the QAPP is a generic or a project-specific QAPP (circle one).

5. List dates of scoping sessions that were held: August 3, 2022—Data Quality Objective (DQO) Session

QAPP Worksheets #1 and #2. Title and Approved Page (Continued)

6. List dates and titles of QAPP documents written for previous site work, if applicable:

Title:	Approval Date(s):
Paducah Gaseous Diffusion Plant Data Management Plan, DOE/LX/07-2458&D2	9/10/2021
Paducah Gaseous Diffusion Plant Programmatic Quality Assurance Project Plan, Paducah, Kentucky, DOE/LX/07-2409&D1	February 2017
Paducah Gaseous Diffusion Plant Programmatic Quality Assurance Project Plan, Paducah, Kentucky, DOE/LX/07-2421&D1	April 2018
Paducah Gaseous Diffusion Plant Programmatic Quality Assurance Project Plan, Paducah, Kentucky, DOE/LX/07-2439&D1	April 2019
Paducah Gaseous Diffusion Plant Programmatic Quality Assurance Project Plan, Paducah, Kentucky, DOE/LX/07-2446&D1	April 2020
Paducah Gaseous Diffusion Plant Programmatic Quality Assurance Project Plan, Paducah, Kentucky, DOE/LX/07-2459&D1	April 2021
Paducah Gaseous Diffusion Plant Programmatic Quality Assurance Project Plan, Paducah, Kentucky, DOE/LX/07-2479&D1	March 2022

7. List organizational partners (stakeholders) and connection with lead organization:
U.S. Environmental Protection Agency (EPA) Region 4 [Federal Facility Agreement (FFA) member]; KDEP (regulates hazardous and solid waste landfills, effluent discharge permits, FFA member)

8. List data users: DOE, FRNP, subcontractors, EPA Region 4, KDEP

9. Table 1 provides a crosswalk of required QAPP elements.

This QAPP includes 26 combined worksheets that are required based on UFP-QAPP guidance, as updated by the optimized worksheet guidance (37 total worksheets). Worksheets #10 and #17 have been omitted because the problem definitions are described in detail within the body of the EMP, of which this QAPP is an appendix. Each of these worksheets has been reviewed to ensure the accuracy of the information presented in this QAPP.

QAPP Worksheets #3 and #5.
Project Organization and QAPP Distribution

Distribution is based on the position title. A change in the individual within an organization will not trigger a resubmittal of the QAPP. DOE may choose to update this worksheet and submit page changes to the document holders. Alternatively, as with other changes to the approved project-specific QAPP, personnel changes may be tracked and included as an attachment to the QAPP. Managers are responsible for distribution to their staffs.

Controlled copies of the QAPP will be distributed according to the distribution list below. This list will be updated, as needed, and kept by the FRNP Records Management Department. Each person receiving a controlled copy also will receive any updates/revisions. If uncontrolled copies are distributed, it will be the responsibility of the person distributing the uncontrolled copy to provide updates/revisions.

Position Title	Organization	QAPP Recipients	Current Telephone Number	Current E-mail Address	Document Control Number

QAPP Worksheet #6.
Communication Pathways

NOTE: Formal communication across company or regulatory boundaries occurs via letter. Other forms of communication, such as e-mail, telephone calls, meetings, etc., will occur throughout the project. Regular project communication among DOE, the Site Contractor, and the regulatory agencies concerning project progress is expected. Deviations from the EMP/QAPP will be communicated upward through the chain of command to regulatory agencies using communication tools commensurate with the issue.

Communication Driver	Organization	Name	Contact Information	Procedure (timing, pathway, documentation, etc.)
Regulatory agency interface	DOE, EPA, KDEP	DOE PM: Rich Bonczek; EPA Remedial PM: Victor Weeks; KDEP PM: Brian Begley	rich.bonczek@pppo.gov weeks.victor@epa.gov brian.begley@ky.gov	Formal communication among DOE, EPA, and KDEP.
Field progress reports	FRNP	FRNP Environmental Services Director: Bruce Ford	bruce.ford@pad.pppo.gov	Formal communication between DOE and contractor for the Environmental Monitoring Project.
Stop work due to safety issues	FRNP	FRNP Environmental Services Director: Bruce Ford and FRNP HSS&Q Director: Duke Moscon	bruce.ford@pad.pppo.gov duke.moscon@pad.pppo.gov	FRNP will communicate work stoppages to DOE PM as required by procedure.
QAPP changes during project execution	FRNP	FRNP Environmental Services Director: Bruce Ford and FRNP Quality Assurance/Quality Control Program Manager: Jennie Freels	bruce.ford@pad.pppo.gov jennie.freels@pad.pppo.gov	Obtain approval from DOE PM. Submit QAPP amendments to DOE, KDEP, and EPA.
Field corrective actions	FRNP	FRNP Environmental Services Director: Bruce Ford	bruce.ford@pad.pppo.gov	Field corrective actions will need to be approved by FRNP Project Director and communicated to the DOE, EPA, and KDEP PMs.
Analytical laboratory interface	FRNP	FRNP SMO Manager: Jaime Morrow (Acting)	jaime.morrow@pad.pppo.gov	Communication between FRNP and analytical laboratory.

Data verification issues (e.g., incomplete records)	A2RGC, LLC, FRNP	Data Validator: Matthew Richardson, FRNP SMO Manager: Jaime Morrow (Acting)	mrichardson@geosyntec.com jaime.morrow@pad.pppo.gov	Data verification issues will be reported to the FRNP SMO.
Data validation issues (e.g., noncompliance with procedures)	A2RGC, LLC, FRNP	Data Validator: Matthew Richardson, FRNP SMO Manager: Jaime Morrow (Acting)	mrichardson@geosyntec.com jaime.morrow@pad.pppo.gov	Issues with data quality will be reported to the FRNP SMO.

NOTE: This QAPP is position-based with names of the current positions presented. In the event the contractor changes and the position titles change, DOE will notify EPA and KDEP of the change.

QAPP Worksheet #9.
Project Planning Session Summary

Project scoping is the key to the success of any project and is part of the systematic planning process. The preparation of this QAPP included review of past documents produced and planning meetings to establish the objectives of the project. It was determined that a formal DQO session was needed for the FY 2023 EMP. The worksheet identifies participants who discussed the sampling strategy in the DQO session held on August 3, 2022.

Name of Project: Environmental Monitoring Plan Fiscal Year 2023
Date of Session: August 3, 2022
Scoping Session Purpose: Identify sampling strategies of EM programs

QAPP Worksheet #9. (Continued)
Project Planning Session Summary

Notes/comments: Discussed proposed changes to sampling programs in Appendix C for FY 2023 EMP and that the draft EMP would be submitted to DOE for review by September 1, 2022.

Consensus decisions made: Submit draft FY 2023 EMP by September 1, 2022, for DOE review and comment.

Action items:

Action	Responsible Party	Due Date
Submit draft FY 2023 EMP	Lisa Crabtree	9/1/2022

QAPP Worksheet #11.
Project/Data Quality Objectives

Step 1. State the Problem:

Problem Statement: Determine environmental monitoring requirements set forth by the following drivers:

DOE O 436.1, Departmental Sustainability
DOE O 450.1A, Environmental Protection Program
DOE O 458.1, Radiation Protection of the Public and the Environment
DOE-HDBK-1216-2015, Environmental Radiological Effluent Monitoring and Environmental Surveillance
Kentucky Permits
CERCLA Actions
FFA

Problem Approach:

- The planning team will review plans, regulations, DOE Orders, and permits to determine monitoring requirements.
- Planning Team: DOE and FRNP
- Determine Resources:
  - Schedule: Implement FY 2023 EMP, October 1, 2022
  - Budget: Based upon scope
  - Personnel: FRNP

Step 2: Identify the Goal of the Study

Obtain data to:

- Demonstrate compliance (effluent, rad dose, etc.)
- Demonstrate effectiveness of chosen remedy (Pump & Treat, etc.)
- Provide for modeling efforts (groundwater surveillance)
- Identify potential adverse environmental impacts; supporting Integrated Safety Management System through an Environmental Management System

Data required to be reported via permits or other regulatory decision documents will be reported as required (Appendix C of the EMP lists applicable reports).

QAPP Worksheet #11.
Project/Data Quality Objectives

Step 3. Identify Information Inputs:

Identify Information Inputs (What Information Do We Need)

- Permit or decision document specifies parameters and frequency for demonstration of compliance and remedy effectiveness
- Models and historical data sets provide for data needs

Step 4. Identify the Boundaries of the Study:

Permits, chosen remedies, and modeling are ongoing until permit modifications or final remedies are chosen or demonstrated.

Data needs to meet the measurement quality objective and data quality indicators established by the systematic planning process consistent with procedures *Quality Assured Data*, CP3-ES-5003; *Environmental Monitoring Data Management Implementation Plan at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, CP2-ES-0063; and *Developing, Implementing, and Maintaining Data Management Implementation Plans*, CP3-ES-1003.

Step 5. Develop the Analytical Approach:

Identify methods, parameters, project action limits, method detection limits (MDLs), sample locations, sample frequencies.

Required list of analytes is specified by program within Appendix C of the EMP. Both field screening and on-site and off-site laboratory analyses are used for data collection.

Step 6. Specify Performance or Acceptance Criteria:

Data needs to meet the measurement quality objective and data quality indicators established by the systematic planning process consistent with procedures *Quality Assured Data*, CP3-ES-5003; *Environmental Monitoring Data Management Implementation Plan at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, CP2-ES-0063; and *Developing, Implementing, and Maintaining Data Management Implementation Plans*, CP3-ES-1003.

Obtained data may:

- Provide data for use in the Annual Site Environmental Report
- Identify DOE operations pollutant contributions
- Provide ancillary data that may be required to assess the consequences of a spill or release

QAPP Worksheet #11. (Continued)
Project/Data Quality Objectives

- Identify significant changes in sample analytical results
- Support or supplement data needs for CERCLA actions
- Provide a mechanism for long-term data collection needs under the FFA

EMP does not address reports or modeling development or a show of noncompliance. Example: An exceedance at a KPDES outfall does not indicate an objective within the EMP was not met.

Step 7. Develop the Detailed Plan for Obtaining Data:

- Procedures and Plans
- Analytical Methods
- Statements of Work
- DOE Consolidated Audit Program (DOECAP) Laboratories
- *Environmental Monitoring Data Management Implementation Plan at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*, CP2-ES-0063/FR2A
- Paducah Project Environmental Measurements System, Oak Ridge Environmental Information System (OREIS), Portsmouth/Paducah Project Office Environmental Geographic Analytical Spatial Information System (PEGASIS)

QAPP Worksheet #12-A.
Measurement Performance Criteria (PCBs, Sediment)

Matrix	Sediment
Analytical Group[1]	PCBs
Concentration Level	Low

Sampling Procedure[2]	Analytical Method/SOP[3, 4]	Data Quality Indicators (DQIs)	Measurement Performance Criteria (MPC)	QC Sample and/or Activity Used to Assess Measurement Performance	QC Sample Assesses Error for Sampling (S), Analytical (A) or both (S&A)
See Worksheet #21	SW-846-8082 See Worksheet #23	Precision—Lab	RPD—≤ 25%	Laboratory Duplicates	A
		Precision	RPD—≤ 35%	Field Duplicates	S
		Accuracy	RPD—≤ 40%	Dual column analysis	A
		Accuracy/Bias	% recovery[6]	Laboratory Sample Spikes	A
		Accuracy/Bias Contamination	No target compounds > PQL	Method Blanks/Instrument Blanks	A
		Accuracy/Bias Contamination	No target compounds > PQL	Field Blanks	S
		Accuracy/Bias Contamination	No target compounds > PQL	Equipment Rinseates	S
		Completeness[5]	90%	Data completeness check	S&A

PQL = practical quantitation limit; RPD = relative percent difference
Analytical laboratory results will be reported on a dry weight basis, as applicable, unless specified otherwise.
[1] If information varies within an analytical group, separate by individual analyte.
[2] Reference number from QAPP Worksheet #21.
[3] Reference number from QAPP Worksheet #23.
[4] Appendix C contains the version of the analytical method to be used.
[5] Completeness is calculated by two methods:
- As the number of valid analytical results reported divided by the number of analytical results planned, multiplied by 100 to obtain the percentage.
- As the number of valid analytical results reported divided by the number of analytical results requested, multiplied by 100 to obtain the percentage.

[6] Percent recovery is laboratory-specific, calculated from studies performed every six months. Percent recovery ranges will be provided in the laboratory data packages based on the most current study.

QAPP Worksheet #12-B.
Measurement Performance Criteria (Radionuclides, Sediment)

Matrix	Sediment
Analytical Group[1]	Radionuclides (uranium,[8] uranium-234, uranium-235, uranium-238)
Concentration Level	Low

Sampling Procedure[2]	**Analytical Method/SOP**[3, 4]	**Data Quality Indicators (DQIs)**	**Measurement Performance Criteria (MPC)**	**QC Sample and/or Activity Used to Assess Measurement Performance**	**QC Sample Assesses Error for Sampling (S), Analytical (A) or both (S&A)**

		Accuracy/Bias Contamination	No target compounds > PQL	Field Blanks	S
		Accuracy/Bias Contamination	No target compounds > PQL	Equipment Rinseates	S
		Completeness[5]	90%	Data completeness check	S&A

PQL = practical quantitation limit; RPD = relative percent difference

[1] If information varies within an analytical group, separate by individual analyte.

[2] Reference number from QAPP Worksheet #21.

[3] Reference number from QAPP Worksheet #23.

[4] Appendix C contains the version of the analytical method to be used.

[5] Completeness is calculated by two methods:

- As the number of valid analytical results reported divided by the number of analytical results planned, multiplied by 100 to obtain the percentage.
- As the number of valid analytical results reported divided by the number of analytical results requested, multiplied by 100 to obtain the percentage.

[6] Percent recovery is laboratory-specific, calculated from studies performed every six months. Percent recovery ranges will be provided in the laboratory data packages based on the most current study.

[7] Appendix C of the EMP references the analytical laboratory's SOP; however, for the purpose of the QAPP, general analytical methodology is denoted so as to document the preferred analytical method should another laboratory be utilized.

QAPP Worksheet #13.
Secondary Data Uses and Limitations

Secondary Data Type	Data Source (Originating Organization, Report Title, and Date)	Data Generator(s) (Originating Org., Data Types, Data Generation/Collection Dates)	How Data Will Be Used	Factors Affecting Reliability and Limitations on Data Use
OREIS Database	Various	Various	Data will be used to determine the nature and extent of sediment, surface water, and groundwater contamination.	Data have been verified, assessed, and validated (if validation is required). Rejected data will not be used if there is sufficient time to resample and obtain a result that will not be rejected during validation.
Historical Documentation	Various	Various	Information will be used as guidance on related project work.	Information from historical documents will be limited to the available documentation as it relates to a specific project. Use of historical data may be limited based on how long ago the data were collected and whether site conditions have changed since data collection.

NOTE: OREIS is the repository for Paducah Gaseous Diffusion Plant (PGDP) environmental and waste characterization analytical results. OREIS is a limited access database. Environmental data are downloaded from OREIS to PEGASIS periodically (usually on a quarterly basis). The general public can access data in PEGASIS.

QAPP Worksheets #14 and #16.
Project Tasks & Schedule

Activity	Responsible Party	Planned Start Date	Planned Completion Date	Deliverable(s)	Deliverable Due Date
Routine sampling conducted throughout the fiscal year	FRNP	October 1, 2022	September 30, 2023	See Appendix C of the EMP for deliverable information	See Appendix C of the EMP for deliverable information.

QAPP Worksheet #15.
Project Action Limits and Laboratory-Specific Detection/Quantitation Limits

The application of Worksheet #15 should be evaluated via a graded approach because the sampling dictated within the EMP is with the objective of monitoring and not as a site investigation or remediation effort wherein an "action limit" may appropriately describe the objective of the sampling efforts.

For example, Worksheets #15A through #15F pertain to the parameters of groundwater; however, trichloroethene (TCE) detected in a groundwater well located in the close proximity to the DOE boundary that had never shown TCE may have a differing response action than a response to the exact same TCE concentration in a well located within the groundwater plume which has shown TCE at or above that concentration since monitoring commenced in the 1990s. A better approach would be comparing the data sets to the historical data for the specific locations in question.

Worksheets #15A through #15I combine groundwater and surface water information. Laboratory methods for groundwater and surface water typically do not vary. Action limits between the two may differ. For example, the laboratory will use the same method for the requested analytes on a groundwater sample as they do on a surface water sample regardless if it was collected from a groundwater MW or from an effluent outfall location. But, response actions to the same concentration for a given parameter may or may not differ between the two samples because it would be dependent upon the program under which it is monitored and the location from where the samples were collected. Therefore, the matrices for "water" in the following spreadsheets are shown with groundwater being the primary driver with the exception of the last worksheet, Worksheet #15-I, which specifically addresses the surface water samples required by KPDES permit that have a permit limit associated with the parameter excluding toxicity. The action limits included in worksheets #15A through #15I are well below MCL or derived concentration technical standard values. These action limits were included in the Programmatic QAPP for those projects that perform routine monitoring. These limits will allow those projects to evaluate trends at lower concentrations successfully.

QAPP Worksheet #15-A.
Project Action Limits and Laboratory-Specific Detection/Quantitation Limits (VOCs, Water)

Matrix: Water
Analyte Group: VOCs

VOC	Chemical Abstracts Service (CAS) Number	Project Action Limit/NAL (µg/L)	Project Action Limit Reference[a]	Site COPC?[b]	Laboratory-Specific[c]	
					PQL (µg/L)	MDL(µg/L)
Acrylonitrile	107-13-1	0.052/0.0523	Tapwater[d]/NAL	Yes	5	1.67
Benzene	71-43-2	5.0/0.455	MCL/NAL	Yes	1	0.333
Carbon Tetrachloride	56-23-5	5.0/0.455	MCL/NAL	Yes	1	0.333
Chloroform	67-66-3	80/0.221	MCL/NAL	Yes	1	0.333
1,1-Dichloroethene	75-35-4	7.0/28.5	MCL/NAL	Yes	1	0.333
cis-1,2-Dichloroethene	156-59-2	70/3.61	MCL/NAL	Yes	1	0.333
trans-1,2-Dichloroethene	156-60-5	100/6.78	MCL/NAL	Yes	1	0.333
Ethylbenzene	100-41-4	700/1.50	MCL/NAL	Yes	1	0.333
Tetrachloroethene	127-18-4	5.0/4.06	MCL/NAL	Yes	1	0.333
Trichloroethene	79-01-6	5.0/0.283	MCL/NAL	Yes	1	0.333
Vinyl Chloride	75-01-4	2.0/0.0188	MCL/NAL	Yes	1	0.333

QAPP Worksheet #15-A. (Continued)
Project Action Limits and Laboratory-Specific Detection/Quantitation Limits

VOC	CAS Number	Project Action Limit/NAL (µg/L)	Project Action Limit Reference[a]	Site COPC?[b]	Laboratory-Specific[c]	
					PQL (µg/L)	MDL (µg/L)
Total Xylenes	1330-20-7	10,000/19.3	MCL/NAL	Yes	3	1
o-Xylene	95-47-6	19/19.3	Tapwater[d]/NAL	Yes	1	0.333
m,p-Xylene	179601-23-1	19/19.3[e]	Tapwater[d]/NAL	Yes	2	0.667

CAS = Chemical Abstracts Service
COPC = chemical (or radionuclide) of potential concern
MCL = maximum contaminant level (see EPA Regional Screening Levels https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables)
MDL = method detection limit
NAL = no action level for child resident scenario taken from the RMD
PQL = practical quantitation limit
VOC = volatile organic compound

[a] This QAPP references the MCLs (if available) to support project planning and identify whether lower reporting limits may be needed for some constituents. The worksheet also lists the NALs established by the RMD for the child resident scenario.
[b] Analytes marked with COPC are from Table 2.1 of the RMD and represent the list of chemicals, compounds, and radionuclides compiled from chemicals of potential concern retained as COCs in risk assessments previously performed at PGDP.
[c] The analytical laboratory may not be able to meet the NALs established by the RMD and MCLs reproduced in the RMD. For cases where the PQL is above the PAL/NAL, FRNP will have the laboratory report to the MDL, qualifying the result as estimated. Standard practices for qualifying data will apply for any result reported below the laboratory PQL.
[d] Tapwater—Source: EPA regional screening levels, Tapwater Supporting Table (Target Risk = 1E-6, Hazard Quotient = 0.1) May 2022 (see EPA Regional Screening Levels https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables).
[e] Project action limit for m-Xylene used.

QAPP Worksheet #15-B.
Project Action Limits and Laboratory-Specific Detection/Quantitation Limits (Metals, Water)

Matrix: Water
Analytical Group: Metals

Metal	CAS Number	Project Action Limit/NAL (mg/L)	Project Action Limit Reference[a]	Site COPC?[b]	Laboratory-Specific[c]	
					PQL (mg/L)	MDL (mg/L)
Aluminum	7429-90-5	2.0/2.00	Tapwater[d]/NAL	Yes	0.05	0.0193
Antimony	7440-36-0	0.0060/0.000779	MCL/NAL	Yes	0.003	0.001

Zinc	7440-66-6	0.60/0.600	Tapwater[d]/NAL	Yes	0.02	0.0033

CAS = Chemical Abstracts Service
COPC = chemical (or radionuclide) of potential concern
MCL = maximum contaminant level
MDL = method detection limit
NAL = no action level for child resident scenario from the RMD
PQL = practical quantitation limit

[a] This QAPP references the MCLs (or EPA screening level for tapwater if no MCL) to support project planning and identify whether lower reporting limits may be needed for some constituents. The worksheet also lists the NALs established by the RMD for the child resident scenario.
[b] Analytes marked with COPC are from Table 2.1 of the RMD and represent the list of chemicals, compounds, and radionuclides compiled from COPCs retained as COCs in risk assessments previously performed at PGDP.
[c] The analytical laboratory may not be able to meet the NALs established by the RMD and MCLs reproduced in the RMD. For cases where the PQL is above the PAL/NAL, FRNP will have the laboratory report to the MDL, qualifying the result as estimated. Standard practices for qualifying data will apply for any result reported below the laboratory PQL.
[d] Tapwater-Source: EPA regional screening levels, Tapwater Supporting Table (Target Risk = 1E-6, Hazard Quotient = 0.1) May 2022 (see EPA Regional Screening Levels https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables).
[e] An NAL is not available for chromium (total); therefore, the NAL for chromium III was used.
[f] The MCL established by the EPA for lead is based on a treatment technique action level of 0.015 mg/L.
[g] The PAL/NAL values were derived for metal salts; the CAS number is presented for the elemental form.

QAPP Worksheet #15-C.
Project Action Limits and Laboratory-Specific Detection/Quantitation Limits (PCBs, Water)

Matrix: Water
Analytical Group: PCBs

PCB	CAS Number	Project Action Limit (µg/L)	Project Action Limit Reference[a]	Site COPC?[b]	Laboratory-Specific[c]	
					PQLs (µg/L)	MDLs (µg/L)
Total PCBs	1336-36-3	0.50/0.0436	MCL/NAL	Yes	0.1	0.0333
Aroclor-1016	12674-11-2	0.50[d]/0.140	MCL/NAL	Yes	0.1	0.0333
Aroclor-1221	11104-28-2	0.50[d]/0.00471	MCL/NAL	Yes	0.1	0.0333
Aroclor-1232	11141-16-5	0.50[d]/0.00471	MCL/NAL	Yes	0.1	0.0333
Aroclor-1242	53469-21-9	0.50[d]/0.00785	MCL/NAL	Yes	0.1	0.0333
Aroclor-1248	12672-29-6	0.50[d]/0.00785	MCL/NAL	Yes	0.1	0.0333
Aroclor-1254	11097-69-1	0.50[d]/0.00785	MCL/NAL	Yes	0.1	0.0333
Aroclor-1260	11096-82-5	0.50[d]/0.00785	MCL/NAL	Yes	0.1	0.0333

CAS = Chemical Abstracts Service
COPC = chemical (or radionuclide) of potential concern
MDL = method detection limit
NAL = no action level for child resident scenario from the RMD
PCB = polychlorinated biphenyl
PQL = practical quantitation limit

[a] This QAPP references the MCLs (if available) to support project planning and identify whether lower reporting limits may be needed for some constituents. The worksheet also lists the NALs established by the RMD for the child resident scenario. In some cases, the laboratories may not be able to reach detection limits below the NAL. In these cases, the project team will address this issue in the decision process.
[b] Analytes marked with COPC are from Table 2.1 of the RMD and represent the list of chemicals, compounds, and radionuclides compiled from COPCs retained as COCs in risk assessments previously performed at PGDP.
[c] The analytical laboratory may not be able to meet the NALs established by the RMD and MCLs reproduced in the RMD. For cases where the PQL is above the PAL/NAL, FRNP will have the laboratory report to the MDL, qualifying the result as estimated. Standard practices for qualifying data will apply for any result reported below the laboratory PQL.
[d] MCL for Total PCBs.

QAPP Worksheet #15-D.
Project Action Limits and Laboratory-Specific Detection/Quantitation Limits (Radionuclides, Water)

Matrix: Water
Analytical Group: Radionuclides

Radionuclide	CAS Number	Project Action Limit (pCi/L)	Project Action Limit Reference[a]	Site COPC?[b]	Laboratory-Specific[c] MDAs (pCi//L)
Americium-241	14596-10-2	0.504	NAL	Yes	1
Cesium-137[f]	10045-97-3	1.71	NAL	Yes	10 (75[d])
Neptunium-237[f]	13994-20-2	0.763	NAL	Yes	1 (8[d])
Plutonium-238	13981-16-3	0.398	NAL	Yes	1 (4[d])
Plutonium-239/240	15117-48-3/14119-33-6	0.387	NAL	Yes	1 (4[d])
Technetium-99	14133-76-7	4 mrem/year-dose[e], 900/19.0	MCL/NAL	Yes	25 (50[d])
Thorium-230	14269-63-7	0.572	NAL	Yes	1 (4[d])
Uranium-234[f]	13966-29-5	10.24/0.739	MCL[g]/NAL	Yes	1 (17[d])
Uranium-235[f]	15117-96-1	0.466/0.728	MCL[g]/NAL	Yes	1 (18[d])
Uranium-238[f]	7440-61-1	9.99/0.601	MCL[g]/NAL	Yes	1 (19[d])

CAS = Chemical Abstracts Service
COPC = chemical (or radionuclide) of potential concern
MDA = minimum detectable activity
NAL = no action level for child resident scenario from the RMD

[a] This QAPP references the MCLs (if available) to support project planning and identify whether lower reporting limits may be needed for some constituents. The worksheet also lists the NALs established by the RMD for the child resident scenario. In some cases, the laboratories may not be able to reach detection limits below the NAL. In these cases, the project team will address this issue in the decision process.

[b] Analytes marked with COPC are from Table 2.1 of the RMD and represent the list of chemicals, compounds, and radionuclides compiled from COPCs retained as COCs in risk assessments previously performed at PGDP.

[c] Radionuclide parameters will be reported per laboratory SOPs and the U.S. Department of Defense and Department of Energy Consolidated Quality Systems Manual for Environmental Laboratories.

[d] The value in parentheses reflects MDAs requested under the Environmental Radiation Protection Program.

[e] The value derived by the EPA from the 4 mrem/year MCL for Tc-99 is 900 pCi/L (see https://www.epa.gov/sites/default/files/2015-06/documents/compliance-radionuclidesindw.pdf). An alternate value derived by the EPA from the 4 mrem/year MCL is 3,790 pCi/L and was proposed in the July 18, 1991, *Federal Register*, http://nepis.epa.gov (document number 570-Z-91-049 [search term: 570Z91049]).

[f] PAL/NAL was derived considering the contribution from short-lived decay products.

[g] Based on RMD.

QAPP Worksheet #15-E.
Project Action Limits and Laboratory-Specific Detection/Quantitation Limits (Radionuclides, Water)

Matrix: Water
Analytical Group: Radionuclides/Water Policy

Radionuclide	CAS Number	Project Action Limit (mg/L)	Project Action Limit Reference[a]	Site COPC?[b]	Laboratory-Specific[c] MDAs (mg/L)
Uranium-234	13966-29-5	0.030/0.000399	MCL[d]/NAL[d]	Yes	0.000005
Uranium-235	15117-96-1	0.030/0.000399	MCL[d]/NAL[d]	Yes	0.0005
Uranium-238	7440-61-1	0.030/0.000399	MCL[d]/NAL[d]	Yes	0.003

CAS = Chemical Abstracts Service
COPC = chemical (or radionuclide) of potential concern
MDL = method detection limit
NAL = no action level for child resident scenario from the RMD

[a] This QAPP references the MCLs (if available) to support project planning and identify whether lower reporting limits may be needed for some constituents. The worksheet also lists the NALs established by the RMD for the child resident scenario.
[b] Analytes marked with COPC are from Table 2.1 of the RMD and represent the list of chemicals, compounds, and radionuclides compiled from COPCs retained as COCs in risk assessments previously performed at PGDP.
[c] The analytical laboratory analyzes these parameters by inductively coupled plasma mass spectroscopy. Radionuclide parameters will be reported per laboratory SOPs and the U.S. Department of Defense and Department of Energy Consolidated Quality Systems Manual for Environmental Laboratories.
[d] MCL and NAL for Total Uranium.

QAPP Worksheet #15-F.
Project Action Limits and Laboratory-Specific Detection/Quantitation Limits (SVOCs, Water)

Matrix: Water
Analyte Group: SVOCs

SVOC	Chemical Abstracts Service (CAS) Number	Project Action Limit/NAL (µg/L)	Project Action Limit Reference[a]	Site COPC?[b]	Laboratory-Specific[c]	
					PQL (µg/L)	MDL (µg/L)
Benz[a]anthracene	56-55-3	0.03/0.0298	Tapwater[d]/NAL	Yes	1	0.3
Benzo[a]pyrene	50-32-8	0.2/0.0251	MCL/NAL	Yes	1	0.3
Benzo[b]fluoranthene	205-99-2	0.25/0.251	Tapwater/NAL	Yes	1	0.3

Uranium-235[d]	15117-96-1	0.148	NAL	Yes	1
Uranium-238[d]	7440-61-1	0.556	NAL	Yes	1

CAS = Chemical Abstracts Service
COPC = chemical (or radionuclide) of potential concern
MDA = minimum detectable activity
NAL = no action level for child resident scenario from the RMD

Analytical laboratory results will be reported on a dry weight basis, as applicable, unless specified otherwise.

[a] This QAPP references the NALs established by the RMD and MCLs reproduced in the RMD to support project planning and identify whether lower reporting limits may be needed for some constituents. In some cases, the laboratories may not be able to reach detection limits below the NAL. In these cases, the project team will address this issue in the decision process within the project-specific QAPP.
[b] Analytes marked with COPC are from Table 2.1 of the RMD and represent the list of chemicals, compounds, and radionuclides compiled from COPCs retained as COCs in risk assessments previously performed at PGDP.
[c] The analytical laboratory may not be able to meet the NALs established by the RMD and MCLs reproduced in the RMD. For cases where the MDA is above the PAL/NAL, FRNP will have the laboratory report to the MDL, qualifying the result as estimated. Standard practices for qualifying data will apply for any result reported below the laboratory PQL.
[d] PAL/NAL was derived considering the contribution from short-lived decay products.

QAPP Worksheet #15-I.
Project Action Limits and Laboratory-Specific Detection/Quantitation Limits (KPDES Parameters, Surface Water)

Matrix: Surface Water
Analyte Group: KPDES permit

KPDES Parameters with Permit Limits	CAS Number	Project Action Limit	Outfall	Site COPC?[a]	Laboratory-Specific	
					PQL	MDL
Total Suspended Solids	N/A	30 mg/L	Outfall 001, Outfall 002, Outfall 004, Outfall 006, Outfall 008, Outfall 009, Outfall 010, Outfall 011, Outfall 012, Outfall 013, Outfall 015, Outfall 016, Outfall 017, Outfall 019, Outfall 020	No	5 mg/L	1 mg/L

QAPP Worksheet #18.
Sampling Locations and Methods

Worksheet #18 provides information pertaining to sampling planned for this project.

Sampling Location/ID Number	Matrix	Depth (units)	Analytical Group[a]	Concentration Level[b]	Number of Samples (Identify Field Duplicate %)	Sampling SOP Reference[c]	Rationale for Sampling Location
Sitewide (see Appendix C of the EMP for specific locations)	Sediment	Surface (Creek Bed Samples)	See Appendix C of the EMP	Varies by location and analyte	See Appendix C of the EMP (Minimum of 5%)	See Worksheet #21	See Appendix C of the EMP
	Surface Water	Surface Water in Creeks and Effluent Discharge	See Appendix C of the EMP	Varies by location and analyte	See Appendix C of the EMP (Minimum of 5%)	See Worksheet #21	
	Groundwater	UCRS, URGA, LRGA	See Appendix C of the EMP	Varies by location and analyte	See Appendix C of the EMP (Minimum of 5%)	See Worksheet #21	

SOP = standard operating procedure
N/A = not applicable
UCRS = Upper Continental Recharge System
URGA = Upper Regional Gravel Aquifer
LRGA = Lower Regional Gravel Aquifer

[a] See Analytical SOP References Table (Worksheet #23).
[b] If historic data provide information on anticipated concentration, that information will be populated on this sheet.
[c] See Field SOP References Table (Worksheet #21).

QAPP Worksheets #19 and #30.
Sample Containers, Preservation, and Hold Times

Laboratory: GEL Laboratories, LLC, 2040 Savage Road, Charleston, SC 29407, Valerie Davis, vsd@gel.com, (843) 556-8171

Pace Analytical, 12065 Lebanon Road, Mt. Juliet, TN 37122, Brandon Etheridge, brandon.etheridge@pacelabs.com, (615) 773-7549

List any required accreditations/certifications (requirement dependent upon analysis performed): DOECAP, KPDES Wastewater Laboratory Certification. The laboratories supporting the Environmental Monitoring program hold different certifications.

Back-up Laboratory: Eurofins TestAmerica Laboratories, Inc., 13715 Rider Trail North, Earth City, MO 63045, Jayna Awalt, jayna.awalt@eurofinset.com, (314) 298-8566

Sample Delivery Method: Direct Delivery or Overnight/Federal Express or UPS (United Parcel Service) in accordance with the on-site transportation plan or U.S. Department of Transportation requirements.

Analyte/ Analyte Group	Matrix	Method/SOP	Accreditation Expiration Date[a]	Container(s) (number, size, & type per sample)	Preservation	Preparation Holding Time	Analytical Holding Time	Data Package Turnaround Time
VOCs[b]	Water	See Worksheet #23	9/2023	3 × 40 mL Glass VOA Vial	HCl pH < 2, 0-6°C, no headspace	N/A	14 days for preserved	28 days
SVOCs	Water	See Worksheet #23	9/2023	2 × 1,000 ml amber glass	0-6°C	7 days	40 days	28 days
Metals/ Radionuclides by ICP-MS	Water	See Worksheet #23	9/2023	1 liter Plastic	HNO_3 pH < 2	N/A	180 days	28 days
Mercury	Water	See Worksheet #23	9/2023	N/A	HNO_3 pH < 2	N/A	28 days	28 days
Anions	Water	See Worksheet #23	9/2023	125 mL Plastic	0-6°C	N/A	28 days (2 days for nitrate)	28 days
PCBs	Water	See Worksheet #23	9/2023	2 × 1 liter Amber Glass	0-6°C	N/A	N/A[d]	28 days

QAPP Worksheets #19 and #30. (Continued)
Sample Containers, Preservation, and Hold Times

Analyte/ Analyte Group	Matrix	Method/SOP	Accreditation Expiration Date[a]	Container(s) (number, size, & type per sample)	Preservation	Preparation Holding Time	Analytical Holding Time	Data Package Turnaround Time
Radionuclides	Water	See Worksheet #23	9/2023	3 × 1 liter Plastic	HNO_3 pH < 2[c]	N/A	180 days	28 days
PCBs	Sediment	See Worksheet #23	9/2023	250 mL wide-mouth Amber Glass	0–6°C	N/A	N/A[d]	28 days
Radionuclides	Sediment	See Worksheet #23	9/2023	500 mL wide-mouth Plastic Straight Side	None	N/A	180 days	28 days

NOTE: Sample volume and container requirements will be specified by the laboratory. This table includes standard requirements for routine analytical groups.
*See Analytical SOP References table (Worksheet #23).
[a] Indicates the next FRNP Approved Suppliers List review date.
[b] For C-746-S&T and C-746-U Landfills groundwater samples, VOCs are collected in unpreserved vials with a 7-day holding time due to acrolein and acrylonitrile.
[c] Check with specific laboratory conducting analyses to ensure that acidification will not interfere with laboratory procedures.
[d] A 45-day holding time is an expectation of the laboratory; however, since SW-846 does not indicate a holding time for PCBs, any data that exceeds the 45 days will be identified, but not qualified.
HCl = hydrochloric acid; HNO_3 = nitric acid
ICP-MS = inductively coupled plasma mass spectrometer

QAPP Worksheet #20.
Field Quality Control Sample Summary Table

This worksheet provides a summary of the types of samples to be collected and analyzed for the project.

Matrix	Analyte/ Analytical Group	Field Samples	Field Duplicates	Matrix Spikes (MS)	Matrix Spike Duplicates (MSD)	Field Blanks	Equipment Blanks	Trip Blanks	Other	Total # of Analyses
Sediment	PCBs	See Appendix C of EMP	5%	5%	5%	5%	5%	N/A	N/A	See Appendix C of EMP
Sediment	Radionuclides	See Appendix C of EMP	5%	5%	5%	5%	5%	N/A	N/A	See Appendix C of EMP
Water (Groundwater and Surface Water)	VOCs	See Appendix C of EMP	5%	5%	5%	5%	5%	1 per day or 1 per cooler containing VOC samples	N/A	See Appendix C of EMP
Water (Groundwater)	SVOCs	See Appendix C of EMP	5%	5%	5%	5%	5%	N/A	N/A	See Appendix C of EMP
Water (Groundwater and Surface Water)	Metals	See Appendix C of EMP	5%	5%	5%	5%	5%	N/A	N/A	See Appendix C of EMP
Water (Groundwater and Surface Water)	PCBs	See Appendix C of EMP	5%	5%	5%	5%	5%	N/A	N/A	See Appendix C of EMP
Water (Groundwater and Surface Water)	Radionuclides	See Appendix C of EMP	5%	5%	5%	5%	5%	N/A	N/A	See Appendix C of EMP

PCB = polychlorinated biphenyl
VOC = volatile organic compound
SVOC = semivolatile organic compound
N/A = not applicable

QAPP Worksheet #21.
Project Sampling SOP References Table

SOPs to be used on this project are summarized below.

Reference Number	Title and Number[a] Revision Date	Originating Organization[b]	Equipment Type	Modified for Project Work? (Y/N)	Comments
1	CP3-ES-0043, *Temperature Control for Sample Storage* (5/25/2022)	Contractor	Sampling	N	N/A
2	CP2-WM-0001, *Four Rivers Nuclear Partnership, LLC, Paducah Deactivation and Remediation Project Waste Management Plan* (1/22/2021)	Contractor	N/A	N	N/A
3	CP2-ES-0026, *Wet Chemistry and Miscellaneous Analyses Data Verification and Validation Paducah Gaseous Diffusion Plant, Paducah, Kentucky* (12/13/2017)	Contractor	N/A	N	N/A
4	CP2-ES-0811, *Pesticide and PCB Analyses Data Verification and Validation Paducah Gaseous Diffusion Plant, Paducah, Kentucky* (12/13/2017)	Contractor	N/A	N	N/A
5	CP4-ES-1001, *Transmitting Data to the Paducah Oak Ridge Environmental Information System (OREIS)* (12/21/2017)	Contractor	N/A	N	N/A
6	CP2-ES-0063, *Environmental Monitoring Data Management Implementation Plan at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky* (7/10/2019)	Contractor	N/A	N	N/A
7	CP4-ES-2100, *Groundwater Level Measurement* (9/8/2021)	Contractor	Sampling	N	N/A
8	CP4-ES-2101, *Groundwater Sampling* (4/2023)	Contractor	Sampling	N	N/A
9	CP3-ES-2203, *Surface Water Sampling (*4/2023)	Contractor	Sampling	N	N/A
10	CP4-ES-2302, *Collection of Sediment Samples Associated with Surface Water* (8/18/2021)	Contractor	Sampling	N	N/A
11	CP4-ES-0074, *Monitoring Well Inspection and Maintenance* (9/8/2021)	Contractor	Sampling	N	N/A
12	CP4-ES-2700, *Logbooks and Data Forms* (6/02/2021)	Contractor	N/A	N	N/A

20	CP2-ES-5103, *Polychlorinated Dibenzodioxins/Polychlorinated Dibenzofurans Analyses Data Verification and Validation Paducah Gaseous Diffusion Plant, Paducah, Kentucky* (12/13/2017)	Contractor	N/A	N	N/A
21	CP2-ES-5105, *Volatile and Semivolatile Analyses Data Verification and Validation Paducah Gaseous Diffusion Plant, Paducah, Kentucky* (9/27/2018)	Contractor	N/A	N	N/A
22	CP2-ES-5107, *Inorganic Analyses Data Validation and Verification Paducah Gaseous Diffusion Plant, Paducah, Kentucky* (7/1/2021)	Contractor	N/A	N	N/A
23	CP3-ES-1003, *Developing, Implementing, and Maintaining Data Management Plans* (10/31/2022)	Contractor	N/A	N	N/A
24	CP4-ES-1002, *Submitting, Reviewing, and Dispositioning Changes to the Environmental Databases* (12/21/2017)	Contractor	N/A	N	N/A

QAPP Worksheet #21. (Continued)
Project Sampling SOP References Table

[a] SOPs are posted to the FRNP intranet website. External FFA parties can access this site using remote access with privileges upon approval. It is understood that SOPs are contractor specific.
[b] The work will be conducted by FRNP staff or a subcontractor. In either case, the most current version of the SOPs listed will be followed.
[c] The Hazardous Waste Management Facility Permit defines a duplicate as being collected from a single sample collection container or sample mixing container. This SOP defines a duplicate as being collected using the same procedural requirements as the original sample. Duplicates collected from MWs at the C-404 Landfill under the permit will be collected as prescribed in the permit and as prescribed in this SOP.

QAPP Worksheet #22.
Field Equipment Calibration, Maintenance, Testing, and Inspection Table

The following is the field equipment to be used on the project.

Field Equipment*	Calibration Activity	Maintenance Activity	Testing Activity	Inspection Activity	Frequency	Acceptance Criteria	Corrective Action	Responsible Person	SOP Reference
Water Quality Meter (permit application of the landfills specify Hydrolab)	Calibrate at the beginning of the day	Performed monthly and as needed	Measure solutions with known values (National Institute for Standards and Technology traceable buffers and conductivity calibration solutions)	Upon receipt, successful operation	Daily before each use	Per manufacturer's specifications	Recalibrate or service as necessary	Field Team Leader	Manufacturer's specifications
Turbidity Meter (Nephthelometer)	Calibrate daily before each use	As needed	Measure solutions with known turbidity standards	Upon receipt, successful operation	Daily before each use	N/A (instrument zeroed)	Manually zero meter or service as necessary and recalibrate	Field Team Leader	Manufacturer's specifications
Ferrous Iron Colorimeter	Accuracy check at the beginning of each day	Return to instrument rental for replacement	Measure with standard solution	Upon receipt, successful operation	Check daily before each use	Pass/Fail	Return to rental company for replacement	Field Team Leader	Manufacturer's specifications
Colorimeter (for total residual chlorine)	Accuracy check at the beginning of each day	As needed	Measure with standard solution	Upon receipt, successful operation	Check daily before each use	Within range of manufacturer's standard	Service by manufacturer or replace	Field Team Leader	Manufacturer's specifications
Titrator (for total residual chlorine)	Calibrate to manufacturer's solution weekly	As needed	Measure with standard solution	Upon receipt, successful operation	Weekly	With range of manufacturer's standard	Service by manufacturer or replace	Field Team Leader	Manufacturer's specifications
Electron Water Level Meter	N/A	None	Check daily before each use	Upon receipt, successful operation	Check daily before each use	Pass/Fail	Return to rental company for replacement	Field Team Leader	Manufacturer's specifications
Hach® flow meter	Calibrate to readings on flume	Quarterly or as needed	Measure against flume	Upon receipt, successful operation	Weekly as needed	Pass/Fail	Service by manufacturer or replace	Field Team Leader	Manufacturer's specifications
Colloidal Borescope	N/A	Clean as needed	Ensure aligned with magnetic north	Upon receipt, successful operation	Check daily before each use	Pass/Fail	Service by manufacturer or replace	Field Team Leader	Manufacturer's specifications

QAPP Worksheet #22.
Field Equipment Calibration, Maintenance, Testing, and Inspection Table (Continued)

Field Equipment*	Calibration Activity	Maintenance Activity	Testing Activity	Inspection Activity	Frequency	Acceptance Criteria	Corrective Action	Responsible Person	SOP Reference
Magnetic Hand-Held Compass	N/A	None	None	Upon receipt, successful operation	Check daily before each use	Pass/Fail	Service by manufacturer or replace	Field Team Leader	Manufacturer's specifications
Pressure Transducer (Data Logger typically used for water level measurement in monitoring wells)	Return to manufacturer annually for calibration	Return to manufacturer for maintenance, as needed	Compare water level reading against reading from electron water level meter	Upon receipt, successful operation	Before each use, as needed	Per manufacturer's specifications	Return to manufacturer for repair or replacement	Field Team Leader	CP4-ES-2100, *Groundwater Level Measurement*/ Manufacturer's specifications

*Additional equipment may be needed; additional equipment will follow manufacturer's specifications for calibration, maintenance, inspection, and testing. Calibration data will be documented in logbooks consistent with CP4-ES-2700, *Logbooks and Data Forms*.

QAPP Worksheet #23.
Analytical SOP References Table

Reference Number*	Title, Revision Date, and/or Number	Definitive or Screening Data	Analytical Group/Matrix	Instrument	Organization Performing Analysis	Modified for Project Work? (Y/N)

*Information will be based on laboratory used. Analysis will be by the most recent revision.
**Analytical methods for radiochemistry parameters are laboratory specific.
ICP-MS = inductively coupled plasma mass spectrometer

QAPP Worksheet #24.
Analytical Instrument Calibration Information

Laboratories used by FRNP are participants in DOECAP. In the fall of 2017, DOECAP began providing certification of environmental laboratories through third party organizations. If not in DOECAP, laboratories are audited by contractors for compliance with DOECAP program requirements. As such, laboratory equipment and instruments used for quantitative measurements are calibrated in accordance with the laboratory's formal calibration program as summarized in the SOPs. The laboratory is responsible for maintaining instrument calibration information per their QA Plan including control charts established for all instrumentation.

Whenever possible, the laboratory uses recognized procedures for calibration such as those published by EPA or American Society for Testing and Materials. If established procedures are not available, the laboratory develops a calibration procedure based on the type of equipment, stability, characteristics of the equipment, required accuracy, and the effect of operation error on the quantities measured. Whenever possible, physical reference standards associated with periodic calibrations, such as weights or certified thermometers with known relationships to nationally recognized standards are used. Where national reference standards are not available, the basis for the reference standard is documented. Equipment or instruments that fail calibration or become inoperable during use are tagged to indicate they are out of calibration. Such instruments or equipment are repaired and successfully recalibrated prior to reuse. High resolution mass spectrometer instruments undergo extensive tuning and calibration prior to running each sample set. The calibrations and ongoing instrument performance parameters are recorded and reported as part of the analytical data package.

QAPP Worksheet #25.
Analytical Instrument and Equipment Maintenance, Testing, and Inspection Table

Instrument/ Equipment	Maintenance Activity	Testing Activity	Inspection Activity	Frequency	Acceptance Criteria	Corrective Action	Responsible Person	SOP Reference*
GC-MS	Replace/clean ion source; clean injector, replace injector liner, replace/clip capillary column, flush/replace tubing on purge and trap; replace trap	QC standards	Ion source, injector liner, column, column flow, purge lines, purge flow, trap	As needed	Must meet initial and/or continuing calibration criteria	Repeat maintenance activity or remove from service	Laboratory Section Manager	See Worksheet #23
GC	ECD maintenance; replace/clip capillary column	QC standards	ECD, FID, injector, injector liner, column, column flow	As needed	Must meet initial and/or continuing calibration criteria	Repeat maintenance activity or remove from service	Laboratory Section Manager	See Worksheet #23
ICP-MS and ICP-AES	Clean plasma torch; clean filters; clean spray and nebulizer chambers; replace pump tubing	QC standards	Torch, filters, nebulizer chamber, pump, pump tubing	As needed	Must meet initial and/or continuing calibration criteria	Repeat maintenance activity or remove from service	Laboratory Area Supervisor	See Worksheet #23
pH meter	Clean probe	QC standards	Probe	As needed	The value for each of the certified buffer solutions must be within ± 0.05 pH units of the expected value	Repeat maintenance activity or remove from service	Laboratory Manager	See Worksheet #23
Spectrophotometer	Flush/replace tubing	QC standards	Tubing	As needed	Must meet initial and/or continuing calibration criteria	Repeat maintenance activity of remove from service	Laboratory Manager	See Worksheet #23
TOC Analyzer (NDIRD)	Replace sample tubing, clean sample boat, replace syringe	QC standards	Tubing, sample boat, syringe	As needed	Must meet initial and/or continuing calibration criteria	Repeat maintenance activity or remove from service	Laboratory Manager	See Worksheet #23
CVAA	Replace tubing, check instrument lines and connections, check windows in cell, ensure lamp is operational	QC standards	Instrument lines and connections, windows, and lamp	As needed	Must meet initial and/or continuing calibrations criteria	Repeat maintenance activity or remove from service	Laboratory Manager	See Worksheet #23

*The laboratory is responsible for maintaining instrument and equipment maintenance, testing, and inspection information per their QA Plan. This information is audited. Laboratory(s) contracted will participate in DOECAP, with the exception of the laboratory used to support acute and chronic toxicity analysis in support of the KPDES permit. This laboratory is a KPDES Wastewater Laboratory certified by the Commonwealth of Kentucky and provides the required information to FRNP to be included on the approved suppliers list. Field survey/sampling instrumentation will be maintained, tested, and inspected according to manufacturer's instructions.

CVAA = cold vapor atomic absorption; ECD = electron capture detector; FID = flame ionization detector; GC = gas chromatography; GC-MS = gas chromatography-mass spectrometer; ICP-AES = inductively coupled plasma atomic; emission spectroscopy; ICP-MS = inductively coupled plasma mass spectrometer; NDIRD = nondispersive infrared detector; QC = quality control; TOC = total organic carbon

QAPP Worksheets #26 and #27.
Sample Handling, Custody, and Disposal

Sampling Organization: Sampling Teams/DOE Prime Contractor and Subcontractors

Laboratory: See Worksheets #19 and #30

Method of sample delivery (shipper/carrier): Direct Delivery or Overnight/Federal Express or UPS in accordance with the on-site transportation plan or U.S. Department of Transportation requirements.

Number of day from reporting until sample disposal: 3 months

Activity	Organization and title or position of person responsible for the activity	SOP reference
Sample labeling	Sampling Teams/DOE Prime Contractor and Subcontractors	CP3-ES-2708, *Chain-of-Custody Forms, Field Sample Logs, Sample Labels, and Custody Seals*; and CP3-ES-5004, *Sample Tracking, Lab Coordination, and Sample Handling*
Chain of custody form completion	Sampling Teams/DOE Prime Contractor and Subcontractors	CP3-ES-2708, *Chain-of-Custody Forms, Field Sample Logs, Sample Labels, and Custody Seals*; and CP3-ES-5004, *Sample Tracking, Lab Coordination, and Sample Handling*
Packaging	Sampling Teams/DOE Prime Contractor and Subcontractors	CP3-ES-2708, *Chain-of-Custody Forms, Field Sample Logs, Sample Labels, and Custody Seals*; and CP3-ES-5004, *Sample Tracking, Lab Coordination, and Sample Handling*
Shipping coordination	SMO/DOE Prime Contractor	CP3-ES-2708, *Chain-of-Custody Forms, Field Sample Logs, Sample Labels, and Custody Seals*; and CP3-ES-5004, *Sample Tracking, Lab Coordination, and Sample Handling*
Sample receipt, inspection, & log-in	Sample Management/Contracted Laboratory	Contracted Laboratory SOP
Sample custody and storage	Sample Management/Contracted Laboratory	Contracted Laboratory SOP
Sample disposal	Sample Management/Contracted Laboratory	Contracted Laboratory SOP

QAPP Worksheet #28-A.
QC Samples Table (Aqueous)

Matrix: Aqueous Samples
Analytical Group/Concentration Level: VOCs, Metals, PCBs, RADs, SVOCs
Sampling SOP: See Worksheet #21
Analytical Method/SOP Reference: See Worksheet #23
Sampler's Name/Field Sampling Organization: GEO Consultants
Analytical Organization: GEL Laboratories
No. of Sample Locations: See Appendix C of the EMP

QC Sample	Frequency/Number*	Method/SOP QC Acceptance Limits	Corrective Action	Person(s) Responsible for Corrective Action		Data Quality Indicator (DQI)	Measurement Performance Criteria

Electronic Data Deliverables	Laboratory Staff	Laboratory Project Manager	Project File

QAPP Worksheets #31, #32, and #33.
Assessments and Corrective Action

This worksheet is used to document responsibilities for conducting project assessments, responding to assessment findings and implementing corrective action. Appropriately scheduled assessments (e.g., field sampling technical systems audits at the beginning of sampling) allow management to implement corrective action in a timely manner, thereby correcting nonconformances and minimizing their impact on DQOs/project quality objectives. Assessment checklists should be included in the QAPP or referenced.

Assessments:

Assessment Type	Responsible Party & Organization	Number/Frequency	Estimated Date	Assessment Deliverable	Deliverable Due Date
Field Sampling	Field Team Leader/ FRNP	Quarterly	To be Determined	As described in CP3-QA-1003, *Management and Self-Assessment*	As described in CP3-QA-1003, *Management and Self-Assessment*
Off-site Laboratory Technical Systems Audit	Laboratory Manager/Technical Director	Annually	Annually/Ongoing	Internal Audit Repot	Per Individual Laboratory QA Manual
Management Review	Project Director/ FRNP	Interim management review following site mobilization; final management review upon completion of fieldwork	Annually	As described in CP3-QA-1003, *Management and Self-Assessment*	As described in CP3-QA-1003, *Management and Self-Assessment*

QAPP Worksheets #31, #32, and #33. (Continued)
Assessments and Corrective Action

Assessment Response and Corrective Action:

Assessment Type	Responsibility for responding to assessment findings	Assessment Response Documentation	Time Frame for Response	Responsibility for Implementing Corrective Action	Responsible for monitoring Corrective Action implementation
Field Sampling	Field Team Leader/FRNP	Field Sampling Corrective Action Response	24 hours from receipt of memorandum	Field Team Leader/FRNP	Contractor Performance Assurance Program (CPAP) Manager/FRNP
Off-site Laboratory Technical Systems Audit	Laboratory Manager/Technical Director	Internal Audit Report Deficiency Memorandum	7 days following receipt of proficiency testing deficiency report and before analysis field samples	Laboratory Technical Director	QA Manager/FRNP
Management Review	Project Director/ FRNP	Management Response	As described in CP3-QA-1003, *Management and Self-Assessment*	As assigned in Management Response	CPAP Manager/FRNP

QAPP Worksheet #34.
Data Verification and Validation Inputs

This worksheet is used to list the inputs that will be used during data verification and validation. Data verification is a check that specified activities involved in collecting and analyzing samples have been completed and documented and that the necessary records (objective evidence) are available to proceed to data validation. Data validation is the evaluation of conformance to stated requirements, including those in the contract, methods, SOPs, and the QAPP. Records subject to verification and validation are listed below.

Item	Description	Verification (Completeness)	Validation (Conformance to Specifications)
Planning Documents/Records			
1	Approved QAPP	X	X
2	Contract	X	X
3	Field SOPs	X	X
4	Laboratory SOPs	X	X
Field Records			
5	Field Logbooks and/or sample data forms	X	X
6	Equipment calibration records	X	X
7	Chain-of-Custody forms	X	X
8	Sampling diagrams/surveys	X	X
9	Drilling logs	X	X
10	Geophysics reports	X	X
11	Relevant correspondence	X	X
12	Change orders/deviations	X	X
13	Field audit reports	X	X
14	Field corrective action reports	X	X

QAPP Worksheet #34. (Continued)
Data Verification and Validation Inputs

Item	Description	Verification (Completeness)	Validation (Conformance to Specifications)
Analytical Data Package			
15	Cover sheet (laboratory identifying information)	X	X
16	Case narrative	X	X
17	Internal laboratory chain-of-custody	X	X
18	Sample receipt records	X	X
19	Sample chronology (i.e., dates and times of receipt, preparation, and analysis)	X	X
20	Communication records	X	X
21	Project-specific proficiency testing sample results	X	X

QAPP Worksheet #35.
Data Verification Procedures

This worksheet documents procedures that will be used to verify project data. Data verification is a completeness check to confirm that required activities were conducted, specified records are present, and the contents of the records are complete.

Records Reviewed	Requirement Documents	Process Description	Responsible Person/Organization
Field logbook and/or sample data forms	QAPP, Field SOPs	Verify that records are present and complete for each day of field activities. Verify that all planned samples including field QC samples were collected and that sample collection locations are documented. Verify that meteorological data were provided for each day of field activities. Verify that changes/exceptions are documented and were reported in accordance with requirements. Verify that any required field monitoring was performed and results are documented.	Field Team Leader/FRNP—Performs daily review SMO/FRNP—Performs review as part of data verification and data assessment
Chain-of-custody forms	QAPP, Field SOPs	Verify the completeness of chain-of-custody records. Examine entries for consistency with the field logbook/data form. Check that appropriate methods and sample preservation have been recorded. Verify that the required volume of sample has been collected and that sufficient sample volume is available for QC samples (e.g., MS/MSD). Verify that all required signatures and dates are present. Check for transcription errors.	Field Team Leader/FRNP—Performs daily review SMO/FRNP—Performs review as part of data verification and data assessment Data Validator/A2RGC, LLC—Performs review as part of data validation

QAPP Worksheet #35. (Continued)
Data Verification Procedures

Records Reviewed	Requirement Documents	Process Description	Responsible Person/Organization
Laboratory deliverables	QAPP	Verify that the laboratory deliverable contains all records specified in the QAPP. Check sample receipt records to ensure sample condition upon receipt was noted, and any missing/broken sample containers were noted and reported according to plan. Compare the data package with the COCs to verify that results were provided for all collected samples. Review the narrative to ensure all QC exceptions are described. Check for evidence that any required notifications were provided to project personnel as specified in the QAPP. Verify that necessary signatures and dates are present.	Laboratory PM/Contract Laboratory—Performs review before data is released SMO/FRNP—Performs review part of data verification and data assessment Data Validator/A2RGC, LLC—Performs review as part of data validation
Audit reports, corrective action reports	QAPP	Verify that all planned audits were conducted. Examine audit reports. For any deficiencies noted, verify that corrective action was implemented according to plan.	CPAP Manager/FRNP

QAPP Worksheet #36.
Data Validation Procedures

Data Validator: A2RGC, LLC

Data validation plans are listed in Worksheet #21. These plans also are available on the FRNP intranet website. The fixed-base laboratory will provide data in an Electronic Data Deliverable. Ambient air monitoring data from the weekly and quarterly sampling events will be validated to support National Emission Standards for Hazardous Air Pollutants reporting. Also, groundwater data from the quarterly sampling events at the C-746-U and C-746-S&T Landfills and the semiannual sampling events at the C-404 Landfill will be validated. The groundwater data to be validated was chosen because groundwater comprises the majority of the media collected by the Environmental Monitoring Program. Additionally, the landfill requirements encompass the majority of all types of analyses specified within the Environmental Monitoring Program. Therefore, these programs are considered an adequate representation of Environmental Monitoring data targeted for data validation.

QAPP Worksheet #37.
Data Usability Assessment

This worksheet documents procedures that will be used to perform the data usability assessment. The data usability assessment is performed at the conclusion of data collection activities, using the outputs from data verification and data validation. It is the data interpretation phase, which involves a qualitative and quantitative evaluation of environmental data to determine if the project data are of the right type, quality, and quantity to support the decisions that need to be made. It involves a retrospective evaluation of the systematic planning process, and, like the systematic planning process, involves participation by key members of the project team. The data usability assessment evaluates whether underlying assumptions used during systematic planning are supported, sources of uncertainty have been accounted for and are acceptable, data are representative of the population of interest, and the results can be used as intended, with the acceptable level of confidence.

Identify personnel (organization and position/title) responsible for participating in the data usability assessment:

Environmental Monitoring Project Manager
Risk Assessor
Data Validator
SMO
Field Team Leader

Describe how the usability assessment will be documented:

Data usability will be documented through validation reports as well as through the data assessment review checklist and comment form included in the data assessment packages. Data assessment packages will be created, which will include data assessment comments/questions and laboratory comments. Data verification and assessment queries indicating any historical outliers will be included in the data assessment packages.

FRNP shall determine the adequacy of data based on the results of validation and verification. The usability step involves assessing whether the process execution and resulting data meet project quality objectives documented in the QAPP.

Field and analytical data are verified and assessed per procedure CP3-ES-5003, *Quality Assured Data*. Data assessment packages will be created per this procedure. Data assessment packages will include field and analytical data, chains-of-custody, data verification and assessment queries, and other project-specific information needed for personnel to review the package adequately. Data assessment packages will be reviewed to

QAPP Worksheet #37. (Continued)
Data Usability Assessment

document any issues pertaining to the data and to indicate if DQOs of the project were met. For data selected for validation, the following plans are used: CP2-ES-0026, CP2-ES-0811, CP2-ES-5102, CP2-ES-5105, and CP2-ES-5107.

PARCCS parameters (precision, accuracy, representativeness, comparability, completeness, and sensitivity) will be evaluated per procedure CP3-ES-5003, *Quality Assured Data*. This information will be included in the data assessment packages for review by project personnel. Data assessment also will include documentation of QC exceedances, trends, and/or bias in the data set. Data assessment will document any statistics used.

THIS PAGE INTENTIONALLY LEFT BLANK

QAPP Worksheet #11.
Project/Data Qual5/2022ity Objectives

Step 1. State the Problem:

Per- and polyfluoroalkyl substances (PFAS) were detected in groundwater samples collected in 2019 from two Fire Training Area monitoring wells [MW315 and MW330, groundwater monitoring wells screened in the Upper Continental Recharge System (UCRS) and the Regional Gravel Aquifer (RGA), respectively] (FRNP 2020). A screening assessment that includes additional PFAS data is needed to perform an initial sitewide evaluation for the presence of PFAS in environmental media and drinking water[1] at the Paducah Gaseous Diffusion Plant (PGDP). The screening assessment will include the following sample locations:

- groundwater from selected UCRS and RGA monitoring wells included in Appendix B (see Worksheet #18) of this environmental monitoring plan (EMP);[2]
- groundwater from C-746-K Landfill area monitoring wells included in Appendix B (MW300 and MW302 groundwater monitoring wells screened in the Terrace Gravel; MW344 groundwater monitoring well screened in the upper RGA) of this EMP;
- RGA groundwater from two Northeast Plume Containment System (NEPCS) influent locations (SP234 and SP235 at C-765 and C-765-A, respectively);
- treated groundwater from two NEPCS effluent locations (765SP3 and 765ASP3 at C-765 and C-765-A, respectively);
- RGA groundwater from one Northwest Plume Groundwater System (NWPGS) influent location (HV-082 at C-612);
- treated groundwater from one NWPGS effluent location (HV-171 at C-612);
- groundwater from Fire Training Area locations MW315 and MW330;[3]
- surface water influent and drinking water effluent from the site water treatment plant (C-611);

[1] For the purposes of this project, "drinking water" refers to potable water from the site water treatment plant (C-611) and does not include bottled drinking water provided by an off-site vendor and available to site personnel.
[2] For the purposes of this assessment, groundwater from monitoring wells screened in the lower RGA and paired with or located near another monitoring well(s) screened in the middle or upper RGA will not be analyzed for PFAS.
[3] MW315 and MW330 were sampled in August and September 2019 (FRNP 2020). The conclusion drawn from the sampling results was that PFAS are present at high concentrations in the Fire Training Area and are a source of PFAS contamination to groundwater. The Fire Training Area is included in this screening assessment to gain additional information about this area.

QAPP Worksheet #11.
Project/Data Quality Objectives (Continued)

- drinking water at C-611 prior to entering the distribution system and four tap locations (DW-036 and DW-037 at C-611, DW-038 at C-755, and DW-040 at C-615-G);
- surface water upstream proximate to Outfalls 001, 002, 004[4], 006, 008, 009, 010, 011, 012, 013, 015, 016, 017, 019, and 020;
- treated wastewater at the effluent of the Wastewater Treatment Plant (C-615); and
- leachate from landfill sumps at the C-404 Landfill, C-746-S Landfill, and the C-746-U Landfill.

This appendix contains supplemental PFAS QAPP worksheets related to the PFAS screening assessment. Appendix D QAPP worksheets that also apply to this assessment are #1 and #2; #3 and #5; #4, #7, and #8; #6; #9; #13; #21; #26 and #27; #29; #31, #32, and #33; #34; #35; and #37.

For the purposes of this project, a "screening assessment" is defined as the collection of environmental samples for PFAS laboratory analysis and the comparison of the analytical results with the project action limits (PALs) defined in Worksheets #15-A through #15-D. PALs are considered starting points; once site data are available, the PALs will be reviewed in the context of the overall data set and in consideration of the most recent federal and state regulatory guidance available and may be subject to revision. This includes the potential addition of Total PFAS PALs that may be available.

The focus of the sampling of groundwater, surface water, and leachate in this sitewide evaluation will be to identify areas where PFAS have been released to the environment and may serve as current or future sources of PFAS contamination of environmental media. The Interstate Technology & Regulatory Council (ITRC) defines these areas as "PFAS release areas" where "PFAS could be, or known to have been, released to the environment, even if the site is not the location where the PFAS were generated or used" (ITRC 2022). For brevity, "PFAS release areas" is also used in this QAPP. Importantly, ITRC includes that "PFAS release areas" can be "localized or highly extensive, both horizontally and vertically" (ITRC 2022). Because secondary releases could exist, such as connections between groundwater and surface water and connections between leachate and groundwater, trends in PFAS concentration may be used to identify potential source areas upgradient from sampling locations. In the evaluation to identify potential source areas, the possibility of false positives due to the introduction of PFAS into media during sampling or from site-specific anthropogenic sources (e.g., presence due to air deposition) also needs to be considered.

[4] Samples should be collected from a proximate and accessible downstream location to Outfall 004 as there is no accessible upstream location and the Outfall discharges internally on the Paducah Site to Outfall 008.

Step 2: Identify the Goals of the Study

Do PFAS concentrations in groundwater, treated groundwater (from the plume containment systems), drinking water, effluent from the wastewater treatment plant, surface water, and landfill leachate indicate that potential PFAS release areas exist at the PGDP?

QAPP Worksheet #11.
Project/Data Quality Objectives (Continued)

This project will utilize the sample locations listed in Step 1 to sample for PFAS using existing well pumps and/or equipment and sampling techniques to identify potential PFAS release areas to soil or water. PFAS-specific guidelines related to sampler clothing, personal protective equipment, and use of certain consumer products during sampling, as well as PFAS-specific guidelines related to the handling of samples have been developed and will be employed during sampling, as appropriate. Existing sampling equipment such as well pumps, tubing, fittings, sample collection ports, etc., will be used during sampling and will not be replaced. It is recognized that the use of existing equipment may result in false positive detections of PFAS.[5] Potential PFAS release areas will be defined as locations where PFAS concentrations exceed the applicable PALs provided in Worksheets #15-A through #15-D. This screening assessment will inform future work to further characterize the nature and extent of any potential PFAS release areas identified, including the need for soil and/or sediment samples for PFAS analysis.

Step 3. Identify Information Inputs:

PFAS analytical data will be obtained from the sample locations listed in Step 1. PFAS analysis in groundwater, treated groundwater, surface water, treated wastewater, and landfill leachate samples will be performed by U.S. Environmental Protection Agency (EPA) Draft Method 1633. PFAS analysis in drinking water samples will be performed by EPA Method 537.1.

Overall, analytical data, groundwater elevations, water chemistry (e.g., temperature, pH, conductivity), geophysical and lithological data, and well construction details will be used in conjunction with published geological and climatological information to identify potential PFAS release areas and update the PGDP conceptual site model (CSM). Further details regarding sampling design and rationale are provided in Worksheet #17. This PFAS screening assessment will provide a single line of evidence for the existence of potential PFAS release areas at PGDP. Additional lines of evidence, such as, records of PFAS use and spills at PGDP and a conceptual site model depicting the transport mechanisms and pathways for PFAS may be considered during a later study to characterize the nature and extent of PFAS at PGDP.

Step 4. Identify the Boundaries of the Study:

Media: The target media of interest for the project consist of groundwater, treated groundwater, drinking water, treated wastewater, surface water, and landfill leachate. The screening assessment will include the sample locations listed in Step 1. Groundwater, treated groundwater, surface water, treated wastewater, and landfill leachate will be analyzed for the presence of the PFAS compounds included in EPA Draft Method 1633. Drinking water will be analyzed for the presence of the PFAS compounds included in EPA Method 537.1.

[5] The potential for false positives related to the use of existing sampling equipment will be evaluated, in part, through comparison of groundwater PFAS results from MWs located within the PGDP industrial area and PFAS results from MWs outside of and cross-gradient or upgradient to the PGDP industrial area.

QAPP Worksheet #11.
Project/Data Quality Objectives (Continued)

Spatial Boundaries: The approximate spatial boundaries of the study area are the U.S. Department of Energy (DOE)-owned property at the PGDP. The DOE boundary and the sample locations are shown in Attachment E1 (Figures E1.1 and E1.2).

Temporal Boundaries: The schedule for the fiscal year (FY) 2023 PFAS sampling event is included on Worksheet #14 and #16. In addition, the provisional draft of *PFAS Strategic Roadmap: DOE Commitments to Action 2022-2025*, and the associated guidance materials being prepared as of the date of this quality assurance project plan (QAPP) are required inputs to this sampling process (DOE 2022a).

Step 5. Develop the Analytic Approach:

EPA Draft Method 1633 is for PFAS analysis in treated wastewater, surface water, groundwater, soil, biosolids, sediment, landfill leachate, and fish tissue. As such, EPA Draft Method 1633 will be used for PFAS analysis in the groundwater, treated groundwater, surface water, treated wastewater, and landfill leachate samples collected during this screening assessment. EPA Method 537.1 is for analysis of PFAS in drinking water. Accordingly, EPA Method 537.1 will be used for PFAS analysis in drinking water samples collected during this screening assessment. The data will be subject to verification and assessment and 10 percent validation. The use of field filtration and low density polyethylene or glass bottles for sample storage will be avoided to minimize false negatives (e.g., low bias). False positives are anticipated due to the use of existing sample equipment that will be employed and will be noted during data assessment. See also Worksheets #12, #15, #23, #24, #25, and #28.

Step 1. Any Media

IF PFAS are detected in any media above the laboratory reporting limit, **THEN** the concentration will be evaluated for false positives as part of data verification. **IF** the concentration is verified, **THEN** the concentration will be compared to the applicable PALs defined in Worksheets #15-A through #15-D (see media-specific 2a IF/THEN statements and 2b IF/THEN statements).

IF the PFAS concentrations are deemed to be likely false positives, **THEN** the PFAS concentrations will be used for comparison to other PFAS data sets to assist in identifying other false positives or background PFAS concentrations, **AND** recommendations for further work will be included in the PGDP PFAS Screening Assessment summary.

Step 2a. Groundwater

IF PFAS are detected in groundwater at concentrations greater than the applicable groundwater PAL defined in Worksheets #15-A and #15-B in a sample, **THEN** the area represented by the sample collection point (e.g., the groundwater monitoring well or the NEPCS and NWPGS extraction well networks) will be considered as being at or near a potential PFAS release area to soil or water, **AND** recommendations for further work will be included in the PGDP PFAS Screening Assessment summary.

QAPP Worksheet #11.
Project/Data Quality Objectives (Continued)

Step 2a. Treated Groundwater

IF PFAS are detected in treated groundwater from the NEPCS and/or NWPGS at concentrations greater than the applicable PALs defined in Worksheet #15-D, **THEN** the NEPCS and/or NWPGS and/or the extraction wells serving the NEPCS or the NWPGS will be considered potential PFAS release areas to soil or water, **AND** recommendations for further work will be included in the PGDP PFAS Screening Assessment summary.

Step 2a. Drinking Water

IF PFAS are detected in drinking water at concentrations greater than the drinking water PAL defined in Worksheet #15-E, **THEN** the drinking water plant and/or the drinking water system components located upstream of the sample location will be considered potential PFAS release areas, **AND** recommendations for further work will be included in the PGDP PFAS Screening Assessment summary.[6]

Step 2a. Treated Wastewater

IF PFAS are detected in wastewater effluent at concentrations greater than the surface water PAL defined in Worksheet #15-C, **THEN** the wastewater treatment plant will be considered a potential PFAS release area, **AND** recommendations for further work will be included in the PGDP PFAS Screening Assessment summary.

Step 2a. Surface Water

IF PFAS are detected in surface water at concentrations greater than the UCRS groundwater PAL defined in Worksheet #15-A, **THEN** the surface water body and/or the hydraulically connected feature(s) to the surface water body will be considered potential PFAS release areas, **AND** recommendations for further work will be included in the PGDP PFAS Screening Assessment summary.

Step 2a. Landfill Leachate

IF PFAS are detected in landfill leachate at concentrations greater than the surface water PAL defined in Worksheet #15-C, **THEN** the landfill or burial ground will be considered a potential PFAS release area, **AND** recommendations for further work will be included in the PGDP PFAS Screening Assessment summary.

[6] Drinking water sampling is consistent with the draft *PFAS Strategic Roadmap: DOE Commitments to Action 2022–2025* (DOE 2022a).

QAPP Worksheet #11.
Project/Data Quality Objectives (Continued)

Step 2b. Any Media

IF PFAS are detected at concentrations less than the applicable PAL defined in Worksheets #15-A through #15-E for any media, but above laboratory reporting limits, **THEN** the concentration will be used as a single line of evidence suggesting that the representative area is not at or near a potential PFAS release area to soil or water, **AND** the need for further assessment of PFAS concentration trends over time will be included in the PGDP PFAS Screening Assessment summary. These types of data could also indicate a false positive detection of PFAS.

Step 3. Any Media

IF PFAS are not detected at concentrations above a laboratory reporting limit that is lower than the applicable PAL defined in Worksheets #15-A through #15-E for any media, **THEN** the area where the sample collection point is located will not be considered as being at or near a potential PFAS release area to soil or water, **AND** the area will be excluded from further investigation, **ELSE** the need for further work will be included in the PGDP PFAS Screening summary.

IF PFAS are not detected at concentrations above a laboratory reporting limit that is greater than the applicable PAL defined in Worksheets #15-A through #15-E, **THEN** the screening assessment will be considered incomplete for that sample location, **AND** the need for further work will be included in the PGDP PFAS Screening summary.

Potential Outcomes of Screening

The potential outcome of the PFAS screening assessment is: (i) no potential PFAS release areas to soil or water are identified outside of the Fire Training Area and future investigations could be limited to the Fire Training Area; or (ii) potential PFAS release areas to soil or water are identified and future investigations should include these areas in addition to the Fire Training Area.

Step 6. Specify Performance or Acceptance Criteria:

Groundwater, treated groundwater, surface water, and treated wastewater, and landfill leachate samples will be analyzed using EPA Draft Method 1633. Drinking water samples will be analyzed using EPA Method 537.1. Worksheet #12 provides the measurement performance criteria associated with the field and laboratory quality control (QC). Field QC samples will include field duplicates, field blanks, and equipment blanks; additional sample volume will also be collected for matrix spikes (MSs) and matrix spike duplicates (MSDs). If possible, groundwater equipment blanks will be collected during well maintenance activities when the dedicated pump and tubing can be pulled and if the equipment is decontaminated or replaced prior to reinstallation; and PFAS-free water flowed through them. Worksheet #28 provides the laboratory QC criteria. Both the field and lab QC samples will be critical to identify potential high and low bias in the data set.

QAPP Worksheet #11.
Project/Data Quality Objectives (Continued)

Worksheet #17 presents the field sampling design and sample collection standard operating procedures (SOPs) to determine representativeness. The sample analysis design requirements are described in Worksheets #19 and #30, #20, and #24 through #28.

The data will be subject to 100 percent verification/assessment and 10 percent validation. Data whose associated QC results meet the criteria described in the applicable methodology will be considered usable for supporting the goals of the study.

Statistical analysis or modeling is not anticipated for this screening assessment project.

Step 7. Develop the Detailed Plan for Obtaining Data:

The investigative strategy is a biased sampling approach based upon the scope of work developed by the DOE to perform a PFAS screening assessment at the PGDP by collecting samples at the sample locations listed in Step 1. The sample locations are identified in Worksheet #18 and Attachment E1 (Figures E1.1 and E1.2). Groundwater, treated groundwater, surface water, treated wastewater, and landfill leachate samples will be analyzed using EPA Draft Method 1633. Drinking water samples will be analyzed using EPA Method 537.1. The sampling design and rationale are described in Worksheet #17.

Once data have been verified, assessed, and validated, the analytical data will be reviewed and summarized to develop and/or review and/or revise the conceptual site model as needed. Additional PFAS investigation(s) consistent with this model to further identify or delineate release areas to soil or water, determine the extent of groundwater and/or surface water contaminated by PFAS, or optimize groundwater treatment or water treatment systems are possible recommendations that could result from this project. Further details regarding the sampling and analysis design are described in Worksheets #17, #19 and #30, #20, #24 through #28, and #30. Refer to the EMP QAPP for other project requirements (e.g., data validation, data verification, data quality assessment, data management, data reporting).

QAPP Worksheet #12-A.
Measurement Performance Criteria (PFAS, Non-Potable Water)

Matrix	Non-Potable Water (Groundwater, Treated Groundwater, Treated Wastewater, Surface Water, and Leachate)

		Accuracy/Bias Contamination	No target compounds > ML	Equipment Rinseates	S&A

QAPP Worksheet #12-A.
Measurement Performance Criteria (PFAS, Non-Potable Water) (Continued)

Matrix	Non-Potable Water (Groundwater, Treated Groundwater, Treated Wastewater, Surface Water, and Leachate)
Analytical Group[a]	PFAS
Concentration Level	Low to High

Sampling Procedure	Analytical Method/SOP	Data Quality Indicators	Measurement Performance Criteria	QC Sample and/or Activity Used to Assess Measurement Performance	QC Sample Assesses Error for Sampling (S), Analytical (A) or both (S&A)
See Worksheet #21	EPA 1633[a] See Worksheet #23	Completeness[b]	90%	Data Completeness Check	S&A

[a] Worksheet #12-A will be updated with selection of accredited laboratory for EPA Method 1633. EPA Method 1633 is currently in draft as a single-laboratory validated method.
[b] Completeness is calculated by two methods:
— as the number of valid analytical results reported divided by the number of analytical results planned, multiplied by 100 to obtain the percentage.
— as the number of valid analytical results reported divided by the number of analytical results requested, multiplied by 100 to obtain the percentage.

QAPP Worksheet #12-B.
Measurement Performance Criteria (PFAS, Potable Water)

Matrix	Drinking Water
Analytical Group[a]	Per- and Polyfluoroalkyl Substances (PFAS)
Concentration Level	Low

Sampling Procedure	Analytical Method/SOP	Data Quality Indicators	Measurement Performance Criteria	QC Sample and/or Activity Used to Assess Measurement Performance	QC Sample Assesses Error for Sampling (S), Analytical (A) or both (S&A)

NOTE: EPA Method 1633 is currently in draft as a single-laboratory validated method; therefore, target laboratory specific practical quantitation limits (PQLs) and method detection limits (MDLs) are subject to change.

[a] Values provided are PALs and are established for comparison to laboratory-specific PQLs and MDLs and may change. No Action Limits (NALs) for the Paducah Site are documented in the Risk Methods Document (RMD); NALs were not available for these analytes at the time this QAPP was developed (DOE 2022b).

[b] PALs were established during development of the data quality objectives (DQOs) (Worksheet #11) for the purpose of identifying potential PFAS release areas at the PGDP. See Worksheet #17 for sampling design and rationale.

[c] Based on Table 2.1 of the RMD that represents the list of chemicals, compounds, and radionuclides compiled from chemicals of potential concern (COPCs) retained as contaminants of concern (COCs) in risk assessments previously performed at PGDP (DOE 2022b). PFAS are not currently COPCs at PGDP.

[d] For cases where the PQL is above the PAL, FRNP will have the laboratory report to the MDL, qualifying the result as estimated. Standard practices for qualifying data will apply for any result reported below the laboratory PQL.

[e] This QAPP will be used to solicit laboratories to perform the work. Should the laboratory not be able to meet the MDLs and PQLs identified in the worksheets, the laboratory will submit documentation of its actual MDLs and PQLs and this information will be appended to the QAPP.

NOTE: EPA Method 1633 is currently in draft as a single-laboratory validated method; therefore, target laboratory specific PQLs and MDLs are subject to change.
[a] Values provided are PALs and are established for comparison to laboratory-specific PQLs and MDLs and may change. NALs for the Paducah Site are documented in the RMD; NALs were not available for these analytes at the time this QAPP was developed (DOE 2022b).
[b] PALs were established during development of the DQOs (Worksheet #11) for the purpose of identifying potential PFAS release areas at the PGDP. See Worksheet #17 for sampling design and rationale.
[c] Based on Table 2.1 of the RMD that represents the list of chemicals, compounds, and radionuclides compiled from COPCs retained as COCs in risk assessments previously performed at PGDP (DOE 2022b). PFAS are not currently COPCs at PGDP.
[d] For cases where the PQL is above the PAL, FRNP will have the laboratory report to the MDL, qualifying the result as estimated. Standard practices for qualifying data will apply for any result reported below the laboratory PQL.
[e] This QAPP will be used to solicit laboratories to perform the work. Should the laboratory not be able to meet the MDLs and PQLs identified in the worksheets, the laboratory will submit documentation of its actual MDLs and PQLs and this information will be appended to the QAPP.

[f] "Lifetime Drinking Water Health Advisories for Four Perfluoroalkyl Substances," FRL 9855-01-OW (EPA 2022b).

QAPP Worksheet #17.
Sampling Design and Rationale

Describe and provide a rationale for choosing the sampling approach (e.g., grid system, biased statistical approach): The sampling approach is a judgmental design. The purpose of these data is to identify potential PFAS release areas to soil or water (e.g., refine the CSM) and to guide future work associated with assessing PFAS at the PGDP. Statistical conclusions are not appropriate for this assessment.

Describe the sampling design and rationale in terms of which matrices will be sampled: This PFAS Screening Assessment is a sitewide evaluation for PFAS in PGDP groundwater, treated groundwater, drinking water, treated wastewater, surface water, and landfill leachate using existing monitoring wells, sampling equipment, and sampling procedures. The PFAS screening values used for PALs for this project are described below and in Worksheet #15. The PALs defined in Worksheet #15 will be considered indicators of potential release areas.

- The UCRS groundwater PAL was derived from and informed by the 2019 sample results from MW315 at the Fire Training Area (FRNP 2020), which showed that concentrations of most PFAS constituents at this release area were greater than 1,000 ng/L in the UCRS and serves as a source to the RGA.

- The RGA groundwater PAL was derived from the 2019 sample result from the second sample of MW330 at the Fire Training Area (FRNP 2020), which showed that the primary PFAS constituent, PFOS, at this release area was greater than 100 ng/L in the RGA.

- For the purpose of this PFAS assessment to identify potential PFAS release areas, the surface water PAL was defined to match the UCRS groundwater PAL of 1,000 ng/L.

- The PALs for drinking water and treated groundwater were defined to be 0.004 ng/L for PFOA, 0.02 ng/L for PFOS, 10 ng/L for GenX chemicals, and 2,000 ng/L for PFBS to be consistent with the June 15, 2022, EPA drinking water health advisories (EPA 2022b).

- The PALs for treated wastewater and leachate were defined to be 60 ng/L for PFOA, 40 ng/L for PFOS, 60 ng/L for GenX chemicals, 59 ng/L for PFNA, 390 ng/L for PFHxS, and 6,000 ng/L for PFBS to be consistent with ATSDR values for EPA RSLs and RMLs (EPA 2022a).

What analyses will be performed and at what analytical limits? See Worksheets #12 and #15. PFAS analysis by EPA Method 537.1 for drinking water. PFAS analysis by EPA Draft Method 1633 for groundwater, treated groundwater, treated wastewater, surface water, and landfill leachate.

Where are the sampling locations (including QC, critical, and background samples)? See Worksheet #18 for sample locations and methods. See Worksheet #21 for summary of field QC samples.

QAPP Worksheet #17.
Sampling Design and Rationale (Continued)

How many samples to be taken? 197 groundwater samples (166 RGA, 22 UCRS, 3 Terrace Gravel, 3 RGA treatment system influent samples, and 3 treated groundwater), 1 treated wastewater sample, 5 drinking water samples, 16 surface water samples, and 3 leachate samples. See Worksheet #18.

What is the sampling frequency (including seasonal considerations)? This PFAS Screening Assessment is a single sampling event; samples will be grab samples.

QAPP Worksheet #18.

Sampling Location/ID Number	Matrix	Depth (units)	Analytical Group[a]	Number of Samples (Identify Field Duplicate %)	Sampling SOP Reference[b]	Rationale for Sampling Location
Monitoring Wells and NEPCS and NWPGS Effluent [c]	Groundwater and Treated Groundwater	UCRS, RGA, and Terrace Gravel	PFAS by EPA Draft Method 1633	197 (minimum of 5%)	See Worksheet #21	See Worksheet #17
C-611, DW-036, DW-037, DW-038, DW-040	Drinking Water	N/A	PFAS by EPA Method 537.1	5 (minimum of 5%)	See Worksheet #21	See Worksheet #17
C-615	Treated Wastewater	N/A	PFAS by EPA Draft Method 1633	1	See Worksheet #21	See Worksheet #17
C-611 and Outfalls[c]	Surface Water	N/A	PFAS by EPA Draft Method 1633	16 (minimum of 5%)	See Worksheet #21	See Worksheet #17
C-404, C-746-S, C-746-U	Landfill Leachate	N/A	PFAS by EPA Draft Method 1633	3 (minimum of 5%)	See Worksheet #21	See Worksheet #17

[a] See Analytical SOP References Table (Worksheet #23).
[b] See Field SOPs References Table (Worksheet #21).
[c] Specific locations are provided in Attachment E2.

QAPP Worksheets #19 and #30.
Sample Containers, Preservation, and Hold Times

Laboratory: To be determined (TBD)
List any required accreditations/certifications: DOE Consolidated Audit Program, if applicable
Back-up Laboratory: N/A
Sample Delivery Method: Overnight delivery

Analyte/ Analyte Group	Matrix	Method/SOP	Accreditation Expiration Date	Container(s) (number, size, & type per sample)[a]	Preservation	Preparation Holding Time	Analytical Holding Time	Data Package Turnaround Time
PFAS	Drinking Water	EPA 537.1	TBD	Two 500 mL high density polyethylene (HDPE) containers with polypropylene caps	Trizma® at 5 g/L; 0–10°C	14 days	28 days	TBD
PFAS	Treated Wastewater, Groundwater, Treated Groundwater, Surface Water	EPA Draft Method 1633	TBD	Three aliquots required: one aliquot in two 500 mL HDPE containers, a second aliquot in a 250 mL HDPE container, and a third aliquot in a 15 mL HDPE screening vial (PFAS-free)	0–6°C	28 days[b]	90 days	TBD
PFAS	Leachate	EPA Draft Method 1633	TBD	Two aliquots required: one aliquot in a 125 mL HDPE container, and a second	0–6°C	28 days[b]	90 days	TBD

Analyte/ Analyte Group	Matrix	Method/SOP	Accreditation Expiration Date	Container(s) (number, size, & type per sample)[a]	Preservation	Preparation Holding Time	Analytical Holding Time	Data Package Turnaround Time
				aliquot in a 15 mL HDPE screening vial (PFAS-free)				

NOTE: Sample volume and container requirements will be specified by the laboratory.

[a] All sample containers must have linerless HDPE or polypropylene caps and not contain Teflon.

[b] Per EPA Method 1633, aqueous samples (including leachates) should be analyzed as soon as possible; however, samples may be held in the laboratory for up to 90 days from collection when stored at ≤ -20ºC and protected from light. When stored at 0–6ºC and protected from light, aqueous samples may be held for up to 28 days with the caveat that issues were observed with certain perfluorooctane sulfonamide ethanols and perfluorooctane sulfonamidoacetic acids after 7 days. These issues are more likely to elevate the observed concentrations of other PFAS compounds via the transformation of these precursors if they are present in the sample.

QAPP Worksheet #20.
Field QC Summary

Matrix	Analyte/ Analytical Group	Field Samples	Field Duplicates	Matrix Spikes	Matrix Spike Duplicates	Field Blanks	Equipment Blanks	Trip Blanks	Other	Total # of Analyses
Drinking Water	PFAS	5	1	1	1	1	N/A	N/A	N/A	9
Groundwater/Treated Groundwater	PFAS	197	10	10	10	10	10	N/A	N/A	247
Surface Water	PFAS	16	1	1	1	1	N/A	N/A	N/A	20
Treated Wastewater	PFAS	1	1	1	1	1	N/A	N/A	N/A	5
Leachate	PFAS	3	1	1	1	1	N/A	N/A	N/A	7

QAPP Worksheet #21.
Field SOPs

Reference Number	Title and Number Revision Date[a]	Originating Organization[b]	Equipment Type	Modified for Project Work? (Y/N)	Comments
1	CP4-ES-2101, *Groundwater Sampling* (4/2023)	Contractor	N/A	N	N/A
2	CP4-ES-5105, *Paducah Site Drinking Water Sampling* (4/2023)	Contractor	N/A	N	N/A
3	CP3-ES-0038, *Sampling Non-Fissile Material* (4/2023)	Contractor	N/A	N	N/A
4	CP3-ES-2203, *Surface Water Sampling* (4/2023)	Contractor	N/A	N	N/A
5	CP5-TS-1000, *Per- and Polyfluoroalkyl Substances Sampling Guidelines* (3/2023)	Contractor	N/A	N	N/A
6	CP2-ES-2000, *Per- and Polyfluoroalkyl Substances (PFAS) Analyses Data Verification and Validation at the Paducah Gaseous Diffusion Plant, Paducah, Kentucky*[c]	Contractor	N/A	N	N/A

[a] SOPs are posted to the FRNP intranet website. External Federal Facility Agreement parties can access this site using remote access with privileges upon approval. It is understood that SOPs are contractor specific. The project reports will specify any deviation between the procedures presented in this worksheet, those at the FRNP intranet website, and those actually used during the project.
[b] The work will be conducted by FRNP staff or a subcontractor. In either case, SOPs listed will be followed.
[c] SOP is in review/development and will be completed/available for use as appropriate prior to related PFAS data validation.

QAPP Worksheet #23.
Analytical SOPs

Reference Number[a]	Title, Revision Date, and/or Number	Definitive or Screening Data	Analytical Group/ Matrix	Instrument	Organization Performing Analysis	Modified for Project Work?(Y/N)
EPA Method 537.1	Determination of Selected Per- and Polyfluorinated Alkyl Substances in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)	Definitive	PFAS/Drinking Water	LC/MS/MS	TBD	No
EPA Draft Method 1633	Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous, Solid, Biosolids, and Tissue Samples by LC-MS/MS	Definitive	PFAS/Non-potable Water	LC/MS/MS	TBD	No

Note: Worksheet #23 will be updated with selection of accredited laboratory.
[a] Information will be based on laboratory used. Analysis will be by the most recent revision.

QAPP Worksheet #24.
Analytical Instrument Calibration

Instrument*	Calibration Procedure	Frequency of Calibration	Acceptance Criteria	Corrective Action (CA)	Person Responsible for CA	SOP Reference
Pending	Pending	Pending	Pending	Pending	Pending	Pending

Note: Worksheet #24 will be updated with selection of accredited laboratory.
*The laboratory is responsible for maintaining instrument calibration information per their quality assurance (QA) plan, including control charts established for instrumentation. This information is audited. Additional certifications may be needed based on project-specific requirements (e.g., National Environmental Laboratory Accreditation Program, Kentucky Department for Environmental Protection Drinking Water Laboratory Program). Field survey/sampling instrumentation will be calibrated according to manufacturer's instructions.

QAPP Worksheet #25.
Analytical Instrument and Equipment Maintenance, Testing, and Inspection

Instrument/ Equipment	Maintenance Activity	Testing Activity	Inspection Activity	Frequency	Acceptance Criteria	Corrective Action	Responsible Person	SOP Reference
All	Per laboratory quality manual	QC standards	Per laboratory quality manual	As needed	Must meet initial and/or continuing calibration criteria	Repeat maintenance activity or remove from service	Laboratory Section Manager	See Worksheet #23
LC/MS/MS	Daily items may include solvent replenishment, etc.	EPA 537.1 EPA 1633	Visual inspection of solvent levels. Replace 20M Ammonium Acetate every 48 hours.	Maintenance is ongoing and performed as needed. Preventative maintenance such as solvent replenishment is performed daily.	Successful daily instrument calibration per requirements.	Documentation of item addressed is located in the instruments maintenance logbook. All instrument maintenance items are recorded.	Analyst	See Worksheet #23

Note: Worksheet #25 will be updated with selection of accredited laboratory.

QAPP Worksheet #28.
Analytical Quality Control and Corrective Action (Aqueous)

Matrix: Aqueous Samples
Analytical Group/Concentration Level: PFAS
Sampling SOP: See Worksheet #21
Analytical Method/SOP Reference: EPA Draft Method 1633 and EPA Method 537.1
Sampler's Name/Field Sampling Organization: FRNP
Analytical Organization: TBD
No. of Sample Locations: TBD

QC Sample	Frequency/Number[a]	Method/SOP QC Acceptance Limits	Corrective Action	Person(s) Responsible for Corrective Action	Data Quality Indicator	Measurement Performance Criteria
Field blank	Minimum 5%	≤ contract-required quantitation limit (CRQL)[b]	Verify results; reanalyze	Laboratory should alert project	Contamination—Accuracy/bias	See procedure CP3-ES-5003, *Quality Assured Data*
Equipment blank	Minimum 5%	≤ CRQL[b]	Verify results; reanalyze		Contamination—Accuracy/bias	See procedure CP3-ES-5003, *Quality Assured Data*
Spiked field samples (MS and/or MSD)	1 per analytical batch	See data validation plan CP2-ES-2000	Check calculations and instrument; reanalyze affected samples		Accuracy/Precision	See procedure CP3-ES-5003, *Quality Assured Data*
Laboratory spiked blanks (laboratory control sample)	1 per analytical batch	See data validation plan CP2-ES-2000	Check calculations and instrument; reanalyze affected samples		Contamination—Accuracy/Bias	See procedure CP3-ES-5003, *Quality Assured Data*

Worksheet #28.
Analytical Quality Control and Corrective Action (Aqueous) (Continued)

QC Sample	Frequency/Number[a]	Method/SOP QC Acceptance Limits	Corrective Action	Person(s) Responsible for Corrective Action	Data Quality Indicator	Measurement Performance Criteria
Method Blank	1 per analytical batch	See data validation plan CP2-ES-2000	Check calculations and instrument; reanalyze affected samples	Laboratory should alert project	Accuracy	See procedure CP3-ES-5003, *Quality Assured Data*
Surrogate Standards	All samples, blanks, and QA samples	See data validation plans CP2-ES-2000	Check calculations and instrument; reanalyze affected samples		Accuracy	See procedure CP3-ES-5003, *Quality Assured Data*
Internal standards	All samples and standards	See data validation plan CP2-ES-2000	Check calculations and instrument; reanalyze affected samples		Accuracy	See procedure CP3-ES-5003, *Quality Assured Data*
Field duplicate	Minimum 5%	See data validation plan CP2-ES-2000	Data reviewer will place qualifiers on samples affected	Project	Homogeneity/ Precision	Specific RPD defined for each group in Worksheet #12
Laboratory duplicate	Per laboratory procedure	See data validation plan CP2-ES-2000	Verify results re-prepare and reanalyze	Laboratory analyst	Precision	See procedure CP3-ES-5003, *Quality Assured Data*

[a] The number of QC samples is listed on Worksheet #20.
[b] Unless dictated by project-specific parameters, ≤ CRQL.
